INNOVATIONS IN PERIO

Maximizing the Role of the Periodontal Therapist with Advanced Strategies

www.TheTeamTrainingInstitute.com

4 INNOVATIONS

1. Identification
2. Decontamination
3. Inhibition
4. Preservation

Inferior doctors treat the full blown disease. Mediocre doctors treat the disease before evident. Superior doctors prevent the disease.
- Chinese Medical Text 2400 BC

IDENTIFICATION

DECONTAMINATION

Desiccation is a physical process removing water from infectious microbial material, dead cellular debris (necrotic material) and other macromolecules found around tooth and prosthetic surfaces in the oral cavity.

Indications for Use

1. Caries Restoration
2. Periodontitis and Gingivitis
3. Root Canal Cleanser

DECONTAMINATION

Guided Biofilm Therapy with air polishing uses a mixture of air and glycine or erythritol powder to disrupt and remove biofilm.

Laser Bacterial Reduction and Sulcular Debridement

INHIBITION

PRESERVATION
