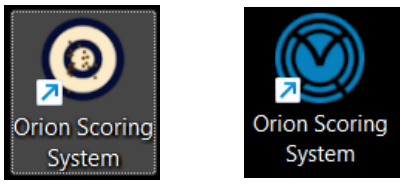
Congratulations and welcome to your new role as an instructor, coach or parent volunteer. Your organization has previously purchased a license for a very powerful tool for marksmanship training that will assist in your coaching endeavors. As the creators of the technology, we want to make sure you know what you have and how best to use it.

Orion™

You may see a paper scanner on your desk and just assume it's a standard piece of office equipment. While, yes it is a commercially available scanner, when combined with our software, it is a powerful analytical tool that can be used to analyze practices, host matches and report scores and even participate in virtual matches against teams all over the world. If you have one of a variety of Canon scanners and the associated software on your computer, you are well on your way.

(Just 3 of the many supporter Canon scanners)



Orion software icons, depending on version

Athena™

If you have one or more of these on your range, your organization has also purchased the *Athena Electronic Scoring Target System* which modernizes your range, gives your athletes instant feedback and engages spectators with instant results and leaderboard changes.

Great, I now know what I have…How do I use it? (Continued on the back)

We understand that our users may learn differently from one user to another. We offer videos, online written materials, and live telephone support from our US based team, available 6 days a week, because range access and matches rarely happen between 9 and 5, Monday through Friday!
