

# WARNING - WARNING - WARNING

## If Your Hands, Arms, Feet, or Legs Are Numb – If You Feel Shooting or Burning Pain or An Electric Sensation – You Are At Risk

# Don't Let Creeping Nerve Death Ruin Your Life

### Get The Help You Need – Here's What You Need to Know...

**Madison, SD** – If you experience numbness or tingling in your hands, arms, legs or feet or if you experience shooting or burning pain, this is important. Please read this carefully.

Peripheral neuropathy, also known as *Creeping Nerve Death*, can kill nerves, cells and muscle in your arms, legs, hands and feet. And cause so much pain it turns your life into a living hell.

**Peripheral neuropathy is when small blood vessels in the hands, arms, feet or legs become diseased and tiny nerves that keep the cells and muscles working properly shrivel up and die.**

Without treatment, nerve degeneration that begins with slight tingling or numbness may lead to a hot burning sensation and intense pain. Without treatment muscle wasting, loss of mobility and loss of independence is often the next step.

**Now here's the scary part...**

- ◆ Nerve damage CAUSES cell damage.
- ◆ Cell damage SPEEDS UP nerve degeneration.

Without treatment this can become a **DOWNWARD SPIRAL** that accelerates. The damage can get worse fast. Mild symptoms intensify. Slight tingling, numbness or lack of feeling can turn into burning pain.

Before you know it, damage can become so bad you hurt all the time.

Unless this downward spiral is stopped and nerves return to proper function - the damage to nerves and cells in the affected area can get so bad your muscles begin to die right along with the nerves and cells. And that sets the stage for weakness, loss of mobility, disability and dependence on others.

If you have early warning signs of peripheral neuropathy, (tingling and/or numbness, loss of feeling or pain) it's **CRITICAL** you get proper treatment.

It's critical because with proper treatment the symptoms can often be reversed. Without it, you are playing Russian Roulette with your health.

Once your nerve loss reaches 85%, odds are there is nothing any doctor can do to help.

**The most common method your doctor may recommend to treat neuropathy is prescription drugs.**

Drugs like Gabapentin, Lyrica, Cymbalta, & Neurotin are often prescribed to manage the pain. But damaged nerves and dying cells do not heal on their own.

**Pain pills do not restore healthy nerve function. They just mask the pain as the nerves continue to degenerate and cells and muscle continue to die.**

Taking endless drugs and suffering terrible side effects that may damage your liver and kidney and create even more problems, is not a reasonable path. You deserve better.

Three things must be determined to effectively treat neuropathy. 1) What is the underlying cause. 2) How much nerve damage has been sustained. And 3) How much treatment your condition will require.

With proper treatment, shriveled blood vessels grow back and nerves will return to proper function. How much treatment you may need depends on your condition.

At **Caron Chiropractic**, we do a complete neuropathy sensitivity exam to determine the extent of your nerve damage for only \$49. The exam includes a detailed sensory evaluation, extensive peripheral vascular testing, and a detailed analysis of the findings.

Early-warning symptoms include tingling and numbness, mild loss of feeling in your hands, arms, legs or feet, inability to feel your feet, which increases your risk of foot-injury and falling.

**More Advanced Symptoms Include...**

- ◆ Loss of coordination and dexterity, which puts you at increased risk of accidents.
- ◆ Inability to feel clothing like socks or gloves.
- ◆ Painful muscle cramps and leg spasms that take the fun out of everything, and keep you up at night tossing, turning, losing sleep, and dealing with pain.
- ◆ High risk of falling, which makes walking dangerous, and makes you more dependent on others.
- ◆ Burning sensations in your arms, legs, hands or feet that may start mild, but as nerves and muscles die, may feel like you're being burned by a blow torch.

Ignore the early warning signals long enough and you risk progressive nerve damage leading to muscle wasting, severe pain, loss of balance and a lot of staying at home wishing you didn't hurt. When every step is like walking on hot coals, sitting still may be the only thing you feel like doing. But there's little joy in sitting still all day long.
