Condiciones:

"declaración de calidad" – el patrón o norma (declaración) de calidad para el agua embotellada es el nivel más alto que un contaminante está permitido en un envase de agua embotellada, según lo establecido por la Administración de Drogas y Alimentos de los Estados Unidos (FDA) y el Departamento de Salud Pública de California. Los estándares no pueden proteger menos la salud pública que los estándares para el agua potable pública, establecidos por la Agencia de Protección Ambiental de los Estados Unidos (EPA) o el Departamento de Salud Pública de California.

"objetivo de la salud pública (PHG)" – Que el nivel de un contaminante en el agua potable este por debajo del cual no hay riesgo conocido o previsto para la salud. Las PHGs son fijadas por la Agencia de Protección Ambiental de California.

"Nivel máximo del contaminante (MCL)" – Es el nivel más alto que un contaminante está permitido en el agua potable, establecido por la Agencia de Protección Ambiental de los Estados Unidos (EPA) o el Departamento de la Salud Pública de California. MCLs primarios se fijan tan cercanos a las PHGs como sea económica y tecnológicamente factible.

"norma primaria para agua potable" – MCLs para los contaminantes que afectan la salud establecidos por la Agencia de Protección Ambiental de los Estados Unidos (EPA) o el Departamento de la Salud Pública de California junto con sus requisitos de monitoreo y preparación de informes, y requisitos de tratamiento de aguas.

Tratamiento del agua: Menos del 20% del caudal de Evian agua natural de manantial es filtrada atravez del uso de arena verde (arena verde: dióxido de manganeso), tratamiento que remueve hierro y manganeso (minerales inofensivos) por razones estéticas

Sitio Internet de la FDA para la recuperación de producto: https://www.fda.gov/safety/recalls-market-withdrawals-safety-alerts

Nuestro producto ha sido completamente testeado conforme a las leyes federales y de las California. Nuestra agua embotellada es un producto alimenticio y no puede ser vendido a menos que cumpla las normas establecidas por la Administración de Drogas y Alimentos de los Estados Unidos y el Departamento de Salud Pública de California. Las siguientes declaraciones son requeridas bajo las leyes de California:

En el agua potable, incluyendo el agua embotellada, se puede esperar, razonablemente, que contenga por lo menos pequeñas cantidades de algunos contaminantes. La presencia de contaminantes no indica necesariamente que el agua contituya un riesgo para la salud. Mayor información sobre los contaminantes y los posibles efectos sobre la

salud puede ser obtenida llamando a la Administración de Drogas y Alimentos de los Estados Unidos, usando la Línea Directa sobre Alimentos y Cosméticos (1-888-723-3366)."

""Algunas personas pueden ser más vulnerables a los contaminantes en el agua potable que el resto de la población. Las personas inmuno-comprometidas, incluyendo, pero no limitando a, personas con cáncer que estén bajo quimioterapia, personas que hayan recibido trasplantes de órganos, personas con HIV/AIDS (SIDA) u otros desórdenes del sistema inmunológico, algunas personas de edad avanzada, y los niños pequeños pueden estar particularmente a riesgo de infecciones. Estas personas deben buscar consejo acerca del agua potable con sus proveedores de servicios de salud. Las guías de la Agencia de Protección Ambiental de Estados Unidos y de los Centros para el Control y la Prevención de Enfermedades sobre las medidas apropiadas para disminuir el riesgo de infección por Cryptosporidium y otros contaminantes microbianos están disponibles a través de la Línea Directa sobre Agua Potable Segura (1-800-426-4791)."

"Las fuentes del agua embotellada incluyen los ríos, los lagos, las corrientes, los estanques, los embalses, los manantiales, y los pozos. Mientras que el agua viaja naturalmente sobre la superficie de la tierra o a través de los suelos, puede recoger substancias que ocurren naturalmente, así como también substancias que están presentes debido a la actividad humana y a la fauna. Las substancias que puedan estar presentes en la fuente de agua incluyen cualquiera de las siguientes:

1. *Las substancias inorgánicas, incluyendo, pero no limitadas a, las sales y los metales, que pueden ocurrir naturalmente o como resultado de cultivos agrícolas, arrastre de aguas pluviales urbanas, aguas servidas industriales o domésticas, o producción de petróleo y gas*

.

2. *Los plaguicidas y herbicidas que pueden proceder de una variedad de fuentes, incluyendo pero no limitando a, la agricultura, el arrastre de aguas pluviales urbanas, y las aplicaciones residenciales.*

3. *Las sustancias orgánicas que son subproductos de procesos industriales y de la producción del petróleo y pueden provenir de gasolineras, del arrastre de aguas pluviales urbanas, del uso agrícola, y de sistemas sépticos.*

4. *Organismos microbianos que pueden originarse en la fauna, las operaciones de cría de ganado, las plantas de tratamiento de aguas residuales, y los sistemas sépticos.*

5. *Las substancias con características radioactivas que pueden ocurrir naturalmente o sean el resultado de la producción de petróleo y gas, y de las actividades de minería."*

"Para asegurarse que el agua embotellada sea segura al consumo, la Administración de Alimentos y Drogas de los Estados Unidos y el Departamento de la Salud Pública del Estado prescriben las regulaciones que limitan la cantidad de ciertos contaminantes en el agua suministrada por las compañías embotelladoras de agua."

Notes:

1) Bottled water sold in the United States shall not contain Fluoride in excess of the levels published by the USFDA in 21 CFR Part 165.110. These levels are based on the annual average of maximum daily air temperatures at the location where the bottled water is sold at retail. Please refer to the most current edition of the regulation to determine the Fluoride maximum level that pertains to your product.
2) A blank on the FDA SOQ column indicates that no maximum level has been established by the FDA for that contaminant.
3) An ND result means that the contaminant was not detected at or above the reporting limit.

Notes:

1) Bottled water sold in the United States shall not contain Fluoride in excess of the levels published by the USFDA in 21 CFR Part 165.110. These levels are based on the annual average of maximum daily air temperatures at the location where the bottled water is sold at retail. Please refer to the most current edition of the regulation to determine the Fluoride maximum level that pertains to your product.
2) A blank on the FDA SOQ column indicates that no maximum level has been established by the FDA for that contaminant.
3) An ND result means that the contaminant was not detected at or above the reporting limit.
