

Hereford Bulls

Scenario

Rank these bulls as they should be selected by an elite purebred breeder in the sandhills of Nebraska. Primary income for this operation comes from the sale of yearling bulls to other seedstock producers who demand bulls who excel genetically and phenotypically. The majority of male progeny from the selected bull will run in large pastures with stocking rates of 20 acres/cow. The top 30% of female progeny will be retained as replacement heifers and future donors.

Performance Data

EPD's

Bull	Birth Date	Scrotal (cm)	CED	BW	WW	YW	Milk	REA	MARB	CHB
1	1/20/21	37	+6.4	+2.7	+64	+96	+38	+.86	+.22	+135
