

# 2022 Michigan 4H/FFA

## Performance Angus Heifers

Rank these heifers as replacement females for a reputable operation in the southern part of Michigan. These females will be mated to Simmental bulls to create half-bloods that market baldy females and commercially focused bulls annually through a production sale in early fall. All cull progeny will be retained through the operations feedlot, where cattle are marketed on a quality grid system.

Feed and labor resources are abundant.
