April 2025

## Keep/Cull Heifers

The goal is to rank these heifers as replacement females in a commercially focused purebred Brahman herd. The operation is aiming to expand and intends to retain all fertile, low-maintenance females that align with long-term production goals. The producer places equal emphasis on maternal traits, convenience traits, and terminal performance. Heifers selected must demonstrate the potential to thrive in a practical, forage-based environment while contributing to both herd efficiency and marketability.
