

Name: _____ Date: _____

Complete the other half of this butterfly. Use the red points as a reference for the mirror image. Connect the reflected points smoothly to complete the butterfly.

1. Look at your finished butterfly. How can you tell both sides match?

2. Count the red points on one side. How many matching points are on the other side?

3. Measure from two different points to the middle line. Then measure from their matching points. What do you notice?

Answer Key

1. Both sides are the same shape and size.
2. The same number of matching points are on the other side.
3. The measurements are the same. Matching points are the same distance from the line.
