

Name: _____ Date: _____

Complete the other half of this butterfly.

1. How did you decide where to place your matching points?

2. How can you check that your butterfly is symmetrical?

3. Measure from one point to the middle line. Then measure from its matching point. What do you notice?

Answer Key

1. I counted squares from the middle line. I made sure each point had a matching point the same distance away.
2. Both sides match. If I fold on the middle line, the two sides would line up.
3. The measurements are the same. Matching points are the same distance from the line.
