TEXT:

I need to talk to you and other key Afr. Am staff about some related things that an Afr Am group from the San Fran Bay area wants to do. It involves getting together some CEOs and the President to talk about digital divide -- might be a good followup to the Commerce event on Dec. 9. We could tie it in to MLK holiday, too -- the wheels have already been set into motion for that possibility through contacts to the King family.

When can we talk? Are you around this afternoon or tomorrow????

It appears a number of people did not get this first message,
so I am sending it again. I apologize if it is a duplicate.

We have scheduled a conference call for Tuesday, November 9,
at 2:30 pm, to discuss the Secretary of Commerce's December 9
Digital Divide Summit. Call 888-285-4585, participant code:

The agenda for the call will be:

1. Change in agenda to put the Roundtable first in the morning and breakout sessions to follow.
2. Outcomes and announcements from the meeting
 - press release or other format for announcement
 - commitments from participants
3. Discussion items for the roundtable

The roundtable discussion will center around four basic topics:

- A. How to provide Access for those who lack the infrastructure and those that can't afford it: economic development through access, lowering price barriers, public access points.
- B. How to provide Training and education that must accompany access: teacher and CTC training, training first time users in home setting, minority serving universities.
- C. How to Create demand among those who can afford to be connected but are not interested: content, new products, targeted marketing.
- D. Cooperation, Information Sharing, and monitoring results by participants on closing the divide.

We want to have announcements from the participants on what their organizations are doing in these 4 areas to address the digital divide. You do not need to share these announcements with the group, but please let Kelly Levy or I know what your plans are. In addition, as mentioned at the 10/20 meeting, it would be very helpful to have an idea what all the participants are ALREADY doing in these areas. To that end, we are asking you for an outline of what your organization is already doing under the topics mentioned above. We would like to get a rough outline by Tuesday. Please e-mail to jjoyner@ntia.doc.gov.

Please let us know during the conference call how we can narrow or broaden the discussion according to what your organization believes needs to be discussed and how you prefer to make your announcements. Also, we are arranging for demos of websites and products in the lobby--let us know if your organization wants to do that.

Please let Sandra Hawkins on 202-482-4127 or me (by e-mail) know if you or a substitute can make the call. Thank you. I look forward to speaking with you on Tuesday.

DRAFT AGENDA
Roundtable I

**CONNECTING UNDERSERVED COMMUNITIES:
A DIALOGUE WITH BUSINESS, CIVIL RIGHTS, AND COMMUNITY
LEADERS**

Specific Discussion Points:

Hugh Price, National Urban League

- The importance of public/private investments: He will announce that GTE has just given the Urban League \$550,000 for 9 "Digital Campus" technology training centers.
- Access Program--designed to get PCs, training, and connectivity to the urban poor for \$250.
- Importance of academic achievement.
- Importance of content--communities need something meaningful to plug into online.

Tessie Guillermo, Asian and Pacific Islander American Health Forum

- Technology needs of Asian and Pacific Islander Community
- What are the digital divide issues of this community
- Why technology is important to this community
- How the Community Technology Foundation of California is addressing the digital divide.

Darien Dash, DME Interactive

- Size of the African American and Hispanic markets
- DME is selling the tools and training the minority communities need to help themselves to a new market online.
- Create online role models who are members of the minority communities.
- Create content accessible to the minority communities.
- Examples from Harlem Superintendent's Council for District 5 (Mr. Dash is the Technology Chair for the Council).

Susan Masten, National Congress of American Indians

- Access for the Native American community
- Goshute--tribes getting their own url domain registry (as Guam and Puerto Rico have their own)

Roberta Katz, TechNet

- TechNet's membership of 180 companies spanning the breadth of technology, has decided to make closing the digital divide a part of its mission.
- This is an issue that is essential for technology companies because of workforce issues, future customers, and community reasons. It is good for the companies and good for the country.
- TechNet is just starting the process of deciding what it will do on the digital divide and is interested in using this forum and future interaction with its participants to help decide what role it can best fill.

Jorge Schement, Benton Foundation

- Need for cross-sector collaboration between federal and state governments, foundations, industry, nonprofits and communities to share ideals and collective wisdom in problem-solving.
- Highlight and evaluate best practices on bridging the digital divide.
- Continue leading-edge research on bridging the digital divide.

Automated Records Management System
Hex-Dump Conversion

- Broader public education is needed on the importance of overcoming the digital divide as a key to our democratic way of life.
- The Digital Divide Network, which will be announced and launched Dec. 9. There will be demos in the lobby of the website.

Automated Records Management System Hex-Dump Conversion

Digital Divide Network

Companies from across the Internet, computing, telecommunications and software industries as well as several of the nation's largest private foundations [subject to foundation approval] are coming together to launch the first-ever initiative to coordinate strategies and efforts targeting solutions to the Digital Divide. Initial partners in the Digital Divide Network include: [SUBJECT TO COMPANY APPROVAL: 3Com, America Online, AT&T, Bell Atlantic, BellSouth, Dell, Gateway, IBM, Intel, Intuit, Microsoft, Network Solutions, SBC, USWest]. [Foundations being approached are Ford, Carnegie, MacArthur, Markle, Open Society Institute, and Kellogg]

Editorial control of Network programming will be by the Benton Foundation in partnership with the National Urban League.

The Digital Divide Network will include:

- the most comprehensive clearinghouse to date on completed and ongoing activities across the country focused on expanding access by underserved communities to the Internet and information technology, including efforts to provide:
 - hardware, software, wiring and connectivity;
 - education and training relating to technological literacy;
 - public education about the centrality of the Internet for individuals' and communities' future economic, political and social success;
 - content and curricula specifically tailored to the needs and uses of underserved communities
- special features on research and initiatives relating to specific communities affected by the Digital Divide, including: African Americans, Latinos, Native Americans, people with disabilities, rural communities, urban poor communities
- ongoing synthesis and analysis of the results of initiatives and successes and failures with a focus on highlighting:
 - best practices
 - areas of building consensus and gaps requiring further study
 - the development, tracking and reporting of key metrics for success in the effort to bridge the divide
 - a detailed national map of public access points across the country and a state-by-state breakdown of ongoing Digital Divide efforts
 - a compendium of resources available for communities to employ in addressing their digital divide issues, including: public and private grant programs, in-kind resources, including hardware, software, training, volunteers and other technical assistance
 - regularly updated news and highlights on digital divide announcements, programs and research
 - community-based features enabling cross-industry calendaring, networking, information-sharing and real-time and asynchronous dialogues

The Digital Divide Network will not attempt comprehensive reporting or coverage of areas which are appropriately dealt with elsewhere (although it will include discussions, reports and initiatives in these areas to the extent they intersect directly with Digital Divide):

- Technology assistance for nonprofits
- Online philanthropy
- Corporate marketing/customer acquisition
- Technological development/deployment

Partners in the Digital Divide Network are committed to:

- Sharing with the Network all information relating to the creation, implementation and results of partnerships and initiatives targeting aspects of the Digital Divide
- Encouraging use of the Network by all partners, grantees, employees, vendors, associates and customers interested in exploring Digital Divide solutions

Automated Records Management System Hex-Dump Conversion

Collaborating with other Network participants to build broad-based consensus on appropriate metrics, best practices and necessary actions to take in bridging the Digital Divide

Strategically integrating corporate and philanthropic Digital Divide initiatives with other Network initiatives to achieve maximum effectiveness.

Focusing significant, high-level resources to working as individual organizations and as partners in a broad-based collaborative to ensure that core objectives for Bridging the Digital Divide are achieved.

Partnering with other companies, nonprofits, foundations and governments in the effort to bridge the Digital Divide.

Funding for the Digital Divide Network is contemplated as follows:

The AOL Foundation will provide operational grant to Benton to manage expansion of existing Digital Divide Clearinghouse into the Digital Divide Network. Funding will last through June.

Digital Divide Network partners will be requested to earmark small portions of significant grants, partnerships and initiatives focused on Digital Divide to the Benton Foundation, to enable the integration of the information relating to that initiative into the Network [optional].

Network partners are not being solicited currently for direct funding in order to be a Network participant, although certainly a regular funding stream will need to be developed before next July.

It is anticipated that if a broad enough partnership can be developed, the ongoing operations of the Network can be funded for the equivalent of about \$20-\$40 thousand per year per partner. (again with this discussion being put off until next summer)

Discussion of Network management is being postponed until after launch with the exception of the following generalities:

AOL Foundation's management relationship with Benton will be replaced by broad-based foundation and industry relationship with Benton.

Benton, in collaboration with the National Urban League, will maintain editorial control of programming on the Network.

All company and foundation participants in the Network will share equal participation in the process of developing a post-launch management structure.

At launch, the Digital Divide Network will be available online in nascent form, including:

An independent Web url: DigitalDivideNetwork.org

The Digital Divide Clearinghouse will be reconfigured to include:

prominent new DDN branding,

removal of all AOL Foundation branding

a feature highlighting the new collaborative effort behind the Network,

a blinking rotation of the partners' logos

creation of an area on Industry initiatives, nonprofit initiatives, government initiatives and foundation initiatives

inclusion, wherever possible of existing Digital Divide initiatives of Network participants

(All Network participants recognize the difficulty of building a new area online in the time we currently have and will be patient and forgiving)

There will be a press release issued by the Network participants, that David Eisner is currently drafting. It will include no industry quotes in the body and will be attached to a quote sheet from partners. All Network participants will have an opportunity to review and comment upon the release. In the event of editorial issues, Benton will have final editorial sign-off.

Assuming that the companies and foundations currently involved in this discussion are satisfied with this formulation of the Digital Divide Network, a revised version of this memo will be made immediately and broadly available for companies wishing to become Network partners. All decided partners will be empowered to solicit additional partners.

Automated Records Management System

Hex-Dump Conversion

Tuesday, December 7, COB will be the cutoff for accepting partners, pre-launch, although, of course we will continue to add partners afterward.

<< Subject: Digital Divide Event Special Invite/Natl Press Club

a public policy program sponsored by the New America Foundation

Special Invitation

Unequal Access, Unequal Opportunity:

Bridging the Digital Divide

with

James Fallows

Chairman, New America Foundation

Session Moderator

Eric Benhamou

Chairman & CEO, 3Com Corporation

Eric Schmidt

Chairman & CEO, Novell Inc.

Zo? Baird

President, Markle Foundation

Elliott Maxwell*

Special Advisor to the Secretary for Electronic Commerce Department of
Commerce

The New America Foundation invites you to attend a panel discussion on the
inequalities of the information age. Questions to be considered by the
distinguished panel include: How can we expand access to information
technologies, especially among the disadvantaged? How can we best invest
in

the digital infrastructure of the future and ensure that more Americans
gain

the skills and training necessary to compete in the next century? How can
we nurture an appreciation for information technologies among our nation's
unconnected communities and citizens?

This program is designed to generate a discussion, facilitated with an
audience of informed policy thinkers, government officials, corporate
representatives, journalists, and others about strategies to narrow the
divide and discuss current trends, such as the falling costs of
information

technology, new patterns of philanthropy, community-based self-help
efforts,

government initiatives, evolving regulatory steps, and corporate
investment

patterns. In the process, they will debate which public policy
strategies,

private efforts, and public/private partnerships hold the most promise for
bringing more Americans into the new economy.

The program will begin at 2:15 p.m. on Monday, 13 December 1999 at the
National Press Club, Washington, D.C.

Please RVSP to clemons@newamerica.net or 202-986-2700. For further information or questions, contact Steve Clemons, Vice President, New America Foundation.

Chairman & CEO, 3Com Corporation

Eric Schmidt
Chairman & CEO, Novell Inc.

Zo? Baird
President, Markle Foundation

Elliott Maxwell*
Special Advisor to the Secretary for Electronic Commerce Department of
Commerce

The New America Foundation invites you to attend a panel discussion on the
inequalities of the information age. Questions to be considered by the
distinguished panel include: How can we expand access to information
technologies, especially among the disadvantaged? How can we best invest
in
the digital infrastructure of the future and ensure that more Americans
gain
the skills and training necessary to compete in the next century? How can
we nurture an appreciation for information technologies among our nation's
unconnected communities and citizens?

This program is designed to generate a discussion, facilitated with an
audience of informed policy thinkers, government officials, corporate
representatives, journalists, and others about strategies to narrow the
divide and discuss current trends, such as the falling costs of information
technology, new patterns of philanthropy, community-based self-help
efforts,
government initiatives, evolving regulatory steps, and corporate investment
patterns. In the process, they will debate which public policy strategies,
private efforts, and public/private partnerships hold the most promise for
bringing more Americans into the new economy.

The program will begin at 2:15 p.m. on Monday, 13 December 1999 at the
National Press Club, Washington, D.C.

Please RVSP to clemons@newamerica.net or 202-986-2700. For further
information or questions, contact Steve Clemons, Vice President, New
America
Foundation.

TEXT:

I'm not sure if we have met yet. I was recently hired in the NEC and am working with Tom Kalil and Patrick Dorton on the Digital Divide event. It would be helpful to our boss, Gene Sperling, if we could have a list of the CEOs and civil rights leaders who will attend. Tom says you would be the person to contact.

I already left a voice mail for you making this request. Please disregard it if you choose to respond to this email instead.

Thanks and I look forward to meeting you in person.

The New America Foundation invites you to attend a panel discussion on the
inequalities of the information age. Questions to be considered by the
distinguished panel include: How can we expand access to information
technologies, especially among the disadvantaged? How can we best invest
in
the digital infrastructure of the future and ensure that more Americans
gain
the skills and training necessary to compete in the next century? How can
we nurture an appreciation for information technologies among our nation's
unconnected communities and citizens?

This program is designed to generate a discussion, facilitated with an
audience of informed policy thinkers, government officials, corporate
representatives, journalists, and others about strategies to narrow the
divide and discuss current trends, such as the falling costs of
information
technology, new patterns of philanthropy, community-based self-help
efforts,
government initiatives, evolving regulatory steps, and corporate
investment
patterns. In the process, they will debate which public policy
strategies,
private efforts, and public/private partnerships hold the most promise for
bringing more Americans into the new economy.

The program will begin at 2:15 p.m. on Monday, 13 December 1999 at the
National Press Club, Washington, D.C.

Please RVSP to clemons@newamerica.net or 202-986-2700. For further
information or questions, contact Steve Clemons, Vice President, New
America
Foundation.

No Internet Tax

*A Proposal Submitted to the "Policies & Options" Paper
Of the Advisory Commission on Electronic Commerce*

By

*Governor James S. Gilmore, III
Commonwealth of Virginia*

November 8, 1999

Policy Statement

(Proposed for Consensus Adoption and Inclusion In "Policies & Options" Paper)

The Internet represents a marvelous tool of empowerment for citizens, consumers and entrepreneurs all over the world. It is the most transforming technological development since the industrial revolution. As we enter the 21st Century, American culture and our economy depend vitally upon the Internet's full development. Therefore, American public policy should embrace the Internet to realize all of its social as well as economic benefits.

Evidence that the Internet is driving America's economic boom can be found everywhere and was most recently documented in a study conducted by the University of Texas' Center for Research in Electronic Commerce. According to the study, the nation's Internet-based economy grew 68 percent last year to produce over \$507 billion in business revenues. The Internet economy has created 2.3 million new jobs. The Internet and information technology sector now accounts for more than half the capital investment in our country. And of the tens of thousands of new businesses being created every year, research shows nearly one in three did not exist prior to 1996. One sector of the Internet economy – electronic commerce – accounted for nearly 1 million of the 2.3 million jobs created by the Internet.

It is beyond dispute that the Internet economy is creating new jobs and new business opportunities and contributing to the stock market boom. Even in rural areas long ago ignored by the economic progress in metropolitan areas and the interstate highway system, small businesses are prospering by selling products worldwide. VirginiaDiner.com in rural Wakefield, Virginia, is a perfect example. The nation's huge investment of tax dollars in the interstate highway system left Rt. 460, a classic small town "Main Street," virtually abandoned years ago. Those people who happened through Wakefield could stop into the Virginia Diner and buy a cup of coffee and a can of Virginia peanuts. But the Internet economy has empowered VirginiaDiner.com to sell Virginia peanuts to consumers from Spain to California to Tokyo. The boom in Internet

Automated Records Management System Hex-Dump Conversion

sales has led the Virginia Diner to increase its employment in Wakefield from 70 to 120 employees over the last three years and this year the Diner will invest over \$100,000 in new computer hardware and software.

All of this economic activity and increased productivity is creating new wealth and increasing tax collections by governments. Indeed, the Internet economy has local, state and federal tax coffers fuller and growing faster than ever through the massive job creation and capital investment occurring in every state in the Nation. The tax collector's glass is not half-empty. It is full. In fact, the National Governor's Association reports that the states collectively took in \$11 billion in tax surpluses in 1998 despite tax cuts totaling \$5.3 billion in 1998 and \$4.9 billion in 1997. And end-of-year balances for all states totaled \$36 billion by the end of 1998.

Underlying all the documented numbers is a profound social and economic transformation. Every sector of our society is challenged to adapt to the new Internet economy. Business is being conducted differently. Business models are changing. Companies are more efficient and productivity per employee is increasing exponentially. The same transformations are occurring in education, in the way Americans live, obtain information and conduct their own lives. Fundamentally, this technology empowers. It empowers businesses, business leaders, employees, educators, and mostly it empowers each individual citizen.

All of this evidence validates the maxim: *The Internet changes everything*. More to the point, the Internet changes everything *including government*. Old rules do not work well in this new borderless economy. Sometimes they do not work at all. Regardless, change is everywhere, and government has to change as well.

In the Internet economy, government at all levels must change its *policies* as well as *the way it operates*. The private sector is producing a 15 percent increase in revenues and productivity per employee as a result of the Internet according to the University of Texas' Center for Research. Government must marshal the Internet to become equally as productive per public employee in the delivery of government services. The result should be a dividend to American taxpayers through lower-cost, more efficient government. The savings should be re-prioritized to other government services so that no city goes without fire trucks or schools, and taxes should be kept low.

There is a contrary view. The contrary view is that the Internet changes everything *except government*. That view wishes to impose a depression-era sales tax based on the locus of a business transaction upon Internet-based transactions which occur personal computer to personal computer from any corner of the world. That view was characterized by Ronald Reagan many years ago when he told a group of small business leaders: "The government's view of the economy could be summed up in a few short phrases: If it moves, tax it. If it keeps moving, regulate it. And if it stops moving, subsidize it." In the new economy, what's moving is the Internet and the business and wealth it generates, and many in government want to tax it, and eventually regulate it, despite tax surpluses being generated by it across the United States.

Automated Records Management System

Hex-Dump Conversion

By burdening Internet consumers with new tax burdens, by imposing new tax collection millstones upon Internet-based entrepreneurs, or reporting all sales transactions to third-party tax collection agents of the government who would view the private purchases of each consumer, the evidence is clear that government would severely inhibit economic growth of the Internet economy and particularly impact small Internet entrepreneurs and consumers. University of Chicago Professor Austan Goolsbee presented to the Commission compelling evidence that the volume of sales over the Internet would decline 30 percent if sales taxes were imposed on Internet commerce. That impact is confirmed in survey after survey. BizRate.com found that 75 percent of on-line customers would buy less on-line if sales taxes were imposed and a survey by Fabrizio-McLaughlin & Associates found that 34 percent of Americans would be less inclined to make purchases over the Internet. Ernst & Young also presented evidence showing tremendous costs to Internet-based retailers to collect such taxes across all states.

Imposition of sales taxes on remote on-line sales may also significantly reduce the value of Internet-based retailer stocks. Currently, no major Internet-based retailer (or "e-tailer") in America is making a profit. Internet-based retailers are operating at losses to build name identification, customer base, and market position. Since price continues to be mentioned as one of the primary concerns of on-line shoppers, e-tailers are keeping their prices and mark ups as low as possible to build customer loyalty. Since a sales tax would increase the bottom line to the customer, most e-tailers would likely reduce their prices to keep the bottom-line price paid by the customer to a minimum. Many already do this to absorb the added costs of add shipping and handling. Sales taxes collection costs would be an additional overhead cost absorbed by each e-tailer. The upshot is that most of the extra costs of collection and the actual sales taxes would be absorbed into the overhead of the businesses, delaying profitability for at least another 2-3 years for major e-tailers. Delayed profits mean reduced stock value in the short-run.

Moreover, the history of taxation confirms that any new tax burdens on Internet-based transactions will not stop at the taxation of tangible goods sold over the Internet. The entire economy is shifting away from tangible goods to services and information. According to a study conducted by Ernst & Young, consumer spending for services has exceeded the growth rate of spending on durable goods by 35 percent and the growth rate of spending on non-durable goods by 50 percent over the last decade. Ernst & Young estimates that 63 percent of current business-to-consumer Internet sales are intangible services. If the old way of government thinking prevails and the Internet changes everything *except* government, then the American people will soon face taxes on their access to digital goods, financial services, entertainment and information transmitted from personal computer to personal computer. Since the Internet's purest application is the delivery of services, such new tax burdens would inevitably inhibit the Internet's expansion as well as consumer privacy.

In return for inhibiting the growth of the Internet economy, governments would increase their sales taxes by approximately 1 percent of the sales tax base over the next

Automated Records Management System

Hex-Dump Conversion

four to five years. Professor Goolsbee estimates that by 2003, sales taxes on Internet-based sales would amount to no more than 1.4 percent total sales taxes collected nationally. To the extent many on-line consumers are switching from catalogues to the Internet, the 1.4 percent largely reflects a revenue-neutral shift for state and local tax collectors.

But the costs of impeding the Internet economy's growth and the public and private benefits attendant to that growth could be far greater than an addition of 1.4 percent in sales tax collections for governments. Therefore, government has sound public policy reasons to free the Internet and the commerce it generates from taxes and the regulatory burdens and privacy intrusions necessary to enforce a sales tax system at its inception.

There are those who oppose tax-freedom for consumers on the Internet because they say it effects a "tax preference" or a "public subsidy" for Internet commerce. To the extent tax-free treatment is viewed as a preference or subsidy of the Internet, American public policy should embrace it in order to realize the Internet's tremendous social and economic potential.

Tax preferences and public subsidies of certain business sectors are precedented, especially where public benefits as great as those generated by the Internet can be obtained. Many states and localities award new companies subsidies of tax dollars to attract them. In the entertainment industry, cities and counties have subsidized the construction of multi-million dollar stadiums to attract the social and economic benefits of professional sports teams. In the retail industry, throughout the decades of the 1960s, 1970s and 1980s, suburban counties invested millions of tax dollars to subsidize the construction of shopping malls, much to the detriment of inner city "Main Streets." And in the 1980s and 1990s, many states and localities and the federal government have provided tax preferences to inner city and rural "Main Streets" – commonly known as "enterprise zones" – in order to revive business activity. The fact that certain business sectors and sales transactions (e.g., services, the sale of securities, repairs) are not currently subject to sales taxes is a tax preference or subsidy of sorts. Indeed, inherent in any tax code are preferences for some behaviors deemed socially and economically beneficial, whether it be home ownership, research and development by a company, employing a person from welfare, or the sale of medical services. Moreover, all local businesses make use of the public resources like roads, sewers, police, fire, schools and colleges where they are located, thus receiving direct and indirect subsidies from their local government. All of the above represent daily public subsidies or tax preferences for some business sectors over others. Likewise, the Internet produces such tremendous social and economic benefits that the public's interest in keeping it tax-free is justifiable as sound public policy.

Professor Goolsbee estimates that a substantial portion of on-line shoppers are new shoppers and concludes that, at present, research "does not seem to point to intense competition between retail and online commerce at present – consistent with the notion of Internet as trade creator." Thus, there is little evidence that shopping malls and Main

Automated Records Management System

Hex-Dump Conversion

Streets will be put out of business by the Internet in the same way malls put Main Streets out of business over the last three decades. According to the evidence, it is just as likely that purchases in stores will continue to increase. It is equally evident that sales taxes on purchases in stores will continue to increase and that proposals to tax Internet commerce represent an effort to tax *new* commercial activity (or at least commercial activity shifting from catalogues to the Internet).

In any event, tax freedom on Internet-based transactions regardless of where a business has physical nexus will create an even-playing field for all retailers, even those national chains that adapt to a "click and mortar" model. All businesses will compete equally when they compete on the Internet.

Failure to provide tax-free trade over the Internet within the United States will necessarily lead to businesses locating offshore to gain an advantage over domestic businesses, especially in the service, digital goods and information sectors. For all worried about discriminatory tax treatments, Congress should consider the probability that some Internet merchants, especially those who sell digital goods, would simply locate off-shore somewhere in a place that doesn't require them to ask consumers questions about where they live or to collect sales taxes.

For all of these reasons, American public policy should embrace the Internet and the borderless economy it creates rather than impose old ways of thinking and antiquated locus-based tax structures upon it.

Policy Proposals

(To Be Included in Policy Options and Proposed for Adoption by Commission)

Sales Tax Treatment of Electronic Transactions

1. ***Congress Should Prohibit All Sales and Use Taxes on Business-to-Consumer Internet Transactions:*** The federal moratorium on Internet taxes should be amended to prohibit all sales taxes on remote business-to-consumer transactions facilitated by the Internet. The current moratorium should be amended to create a tax-free zone for consumers and businesses over the Internet as follows:

- The Tax Freedom Act should be amended to prohibit the imposition of any sales tax on all remote business-to-consumer purchases over the Internet;
- The prohibition should expressly apply to the sale of tangible or intangible goods and property, intellectual property, digital goods, services, securities, information and content, and entertainment;

Automated Records Management System
Hex-Dump Conversion

- The temporary moratorium contained in the Tax Freedom Act should be extended to a permanent prohibition against the imposition of tax burdens on electronic commerce.

Income Taxation & Business Activity Taxation in a Cyber Economy

2. *Congress Should Protect Companies from Unfair Income & Business Activity Taxes Imposed Upon Them Due To Their Virtual Presence In States:* States traditionally have imposed their corporate income and related business activity taxes only upon businesses that physically exist in their jurisdictions. Traditionally that meant companies could be taxed only if they maintained an office or employees in the state. However, the Internet makes companies ubiquitous, and more state tax collectors have begun to impute *physical* presence to companies due to their *virtual* or *electronic* presence, or due to their ownership of equipment needed solely to transfer information in a cyber economy. The business community's concerns over being subjected to unfair income or business activity taxes has been heightened by recent court rulings in several states that "impute" physical presence in various legal contexts due to their virtual or electronic presence.

Commissioner Dean Andal, Vice Chairman of the California State Board of Equalization, proposes that we amend Public Law 86-272 (codified at 15 U.S.C. §§ 381-384) to create a single uniform jurisdictional standard for taxing all companies engaged in interstate commerce – "substantial physical presence" – and to codify a clear definition of "substantial physical presence" in a way that protects companies from unfair taxation due only to Internet-based presence. The Commission should adopt the Andal proposal to amend P.L. 86-272 as follows:

- Extend the protections of P.L. 86-272 to all state *and local* government taxation;
- Provide express protection to companies that sell intangibles, services and information in addition to the current protection for only the sale of tangible goods;
- A company that owns only intangible property in a state would not have "substantial physical presence" in a state and would not be subject to income or business active taxes in that state;
- A company that uses an Internet service provider or that places digital data on an Internet service provider's web server in a state would not have "substantial physical presence" in that state and would not be subject to income or business activity taxes in that state;

**Automated Records Management System
Hex-Dump Conversion**

- A company that uses communications services in a state would not have “substantial physical presence” in that state and would not be subject to income or business activity taxes in that state;
- A company that is “affiliated” with another company in a state would not have “substantial physical presence” in that state and would not be subject to income or business activity taxes in that state.

Taxes on Internet Access

3. ***Prohibit All Taxes on Internet Access:*** The Tax Freedom Act currently permits states to impose taxes on consumers’ monthly access charges in those states that already had adopted them before October 1, 1998. The grandfather clause for access taxes was controversial. The National Governor’s Association lobbied to extend taxes on Internet access and won the day in Congress. Consequently, the tax on Internet access has become a bargaining chip for those who want to impose sales taxes on Internet transactions – a more lucrative tax for government. But that bargain presents a false choice for the Internet economy. The grandfather clause should be eliminated and all states should be prohibited from imposing taxes on the ability of the American people to log on the Internet and empower their lives. To effect this amendment, Congress needs simply to eliminate the grandfather clause contained in the current Act.

Taxes on Telecommunications

4. ***Abolish the Federal 3% Excise Tax on Telephone Service:*** A tax on a consumer’s telephone is a tax on Internet access because most Americans use their phone lines to log on the Internet. Aside from its limitations on personal empowerment, a tax on one’s telephone is regressive. Congress first enacted a federal tax on each consumer’s local and long-distance telephone service as part of the *Spanish War Act of 1898* to fund America’s effort in the Spanish-American War. At the time few American citizens owned telephones and the tax was premised as a luxury tax. Over the ensuing three decades the tax was repealed and reenacted several times. Since 1932, the tax has been levied at varying rates on a continuous basis. The tax was extended to local telephone services a few months prior to the U.S. entrance into World War II by the *Revenue Act of 1941*. Throughout the decades of the 1960s, 1970s, and 1980s, the tax was reduced and scheduled for elimination, but that never occurred due to budget deficits in the early 1980s. In 1987, the tax was made permanent at 3 percent. Today the tax produces approximately \$5 billion for the federal treasury’s general fund, or .3 percent of the total federal budget. The Congressional Budget Office estimates that figure will double over the next ten years. At the same time, the federal government expects budget surpluses over the next ten years.

Automated Records Management System Hex-Dump Conversion

The Commission has pending before it a resolution proposed by Commissioner Grover Norquist to eliminate the federal excise tax on local and long-distance telephone services. The Commission should adopt Commissioner Norquist's resolution and the federal excise tax on telephone service should be eliminated.

However, equally onerous to the backbone of the Internet is the panoply of tens of thousands of varying state and local taxes imposed on telephone services. By some counts telephone companies spend millions of dollars each year to file tax returns in over 40,000 taxing jurisdictions. Commissioner Mike Armstrong has spoken eloquently and cogently of this tax and regulatory burden which costs consumers millions of dollars in the cost of telephone service.

It would be difficult for Congress to try to solve this burden due to government dependency on the existing telephone taxes and the wide variance of state and local taxing authority. Therefore, I propose that Congress provide each state an *incentive* for three years to simplify their complex systems of multiple tax burdens in the process of eliminating the federal excise tax according to the following plan:

- The federal government will immediately eliminate 2% of the 3% federal excise tax. The federal government would continue the tax at 1% for three additional years. At the conclusion of three years, the federal excise tax would be completely abolished at the federal level.
- This tax cut will immediately save the American people over \$3.3 billion this year, doubling to \$6.7 billion ten years from now.
- Each state would be called upon to voluntarily simplify its system of multiple and overlapping state and local telecom taxes into one rate per state and one tax collection point. Internal distribution of telecom taxes would be handled internally by each state. Each state would have three years to accomplish this simplification. Each state that simplifies its system within three years will automatically be ceded the federal 1% telecom excise tax applicable to phone services used in that state and the federal government would stop collecting the 1% tax from phone bills in that state altogether.
- In return for simplifying their existing taxes, state and local governments would be ceded a new revenue stream from the federal government amounting to \$1.7 billion this year and doubling to \$3.4 billion ten years from now. Those funds would compensate states and localities for any sales taxes foregone to Internet-based commerce. Since Ernst & Young and Professor Goolsbee estimate that interstate Internet-based sales would have provided states only \$170 to \$200 million in sales taxes in 1998, this new revenue stream will create an immediate tax windfall of \$1.5 billion for states and localities.

Automated Records Management System Hex-Dump Conversion

- American consumers would benefit because the cost of telecommunications services could be reduced in a competitive market to reflect savings in company overheads. Reduction in telephone costs reduces the cost to log on the Internet.
- States that do not simplify state and local telecom taxes would *not* be ceded the 1% federal tax and would lose the chance after three years when the federal tax would automatically be abolished at the federal level.

International Tariff Treatment of E-Commerce

5. *No International Tariffs on E-Commerce:* International taxes and tariffs pose a tremendous threat to U.S. global competitiveness. The Commission has voted unanimously to oppose the imposition of any international tariffs on Internet-based sales and transactions. The Clinton-Gore Administration should vigorously oppose international tariffs on transactions conducted electronically.

International Tax Treatment of E-Commerce

6. *No International Taxes on E-Commerce:* The United States should oppose the imposition of any international taxes on Internet-based sales and transactions originating in the United States to mirror the United States' own domestic "tax free zone" over the Internet. The Clinton-Gore Administration should vigorously oppose taxes by foreign countries on U.S. sales conducted electronically, including bit and byte taxes.

Abolish the Digital Divide for All Consumers

7. *Amend Federal Welfare Guidelines to Permit States to Spend TANF Surpluses to Buy Computers and Internet Access for Needy Families:* Due to the success of welfare-to-work reforms and the booming economy, welfare rolls have been reduced dramatically across the United States. Consequently, many states have accumulated surpluses of federal TANF (Temporary Assistance to Needy Families) funds. Under federal statutes and regulations, states arguably could use TANF funds to empower needy parents and their children with computers and Internet access. However, there is some doubt regarding the legality of using surplus TANF funds (unliquidated obligations and unobligated balances) to put needy families on-line. Therefore, Congress should clarify federal law to permit states to use TANF surpluses to purchase computers and Internet access for needy families.

America can abolish the digital divide and empower needy families in rural America and inner cities to participate in the Internet economy on an even playing field with affluent families. Poor families should have the same tax-free opportunity to

Automated Records Management System
Hex-Dump Conversion

purchase clothing and food, to invest in securities, and to obtain critical information about employment and educational opportunities as anyone else. TANF surplus funds are a rational and available source of funds to accomplish this objective without increasing taxes and without creating all-new entitlement programs. Once federal law is amended, each state should act quickly to partner with computer companies and Internet service providers for the lowest prices for the most up-to-date hardware and software and swift installation.

Note: Executive Memorandum not definite

PRESIDENT CLINTON: WORKING TO BRIDGE THE DIGITAL DIVIDE
Draft December 7, 1999

Today, President Clinton announced that he intends to lead a tour in the Spring of 2000 to focus national attention on the digital divide -- the growing division in the United States between information "haves" and "have-nots." To support this effort, President Clinton directed members of his Cabinet to take specific actions to close the digital divide, such as expanding Community Technology Centers in low-income urban and rural neighborhoods, continuing to measure the extent of the digital divide, and helping low-income workers gain the skills they need to compete for high-paying information technology jobs. He also announced several commitments from the private sector and non-profit organizations that will help address the problem, including a commitment of the Council of Black Churches to make this issue a top priority, a comprehensive clearinghouse of state and local efforts to bridge the digital divide, and a partnership between the private sector and the Leadership Conference on Civil Rights that will help bring civil rights organizations into the 21st century.

Today's announcement came as Secretary Daley convened a summit on the digital divide with prominent high-tech CEOs and the leaders of civil rights organizations, non-profits, and foundations.

From digital divide to digital opportunity

President Clinton made several announcements that will help bridge the digital divide and create digital opportunity for more Americans.

1. **A New Markets tour to disadvantaged urban and rural communities to focus national attention on the digital divide:** The President will lead a tour next spring to highlight communities that are using information technology to enhance our children's education, expand access to life-long learning, and to create economic growth and high-tech, high-wage jobs. Previous tours have served as a catalyst for new public-private partnerships to expand opportunity in those regions of the country that have not yet reaped the benefit's of America's economic expansion.
2. **A directive to members of the Cabinet to take specific actions to address the digital divide:** President Clinton is directing members of his Cabinet to take specific steps to close the digital divide, including:
 - Continuing to measure the nature and extent of the digital divide by examining the importance of income, education, race, gender, geography and age to Americans' access to Information Age tools;
 - Expanding the network of Community Technology Centers to provide access to technology for those American who can't afford it;
 - Promoting applications of the Internet that will empower low-income families, such as the ability to start their own business; and

- Upgrading the IT skills of workers in low-income communities

3. **Digital Divide Network:** Companies from across the computing, telecommunications, software, and Internet industries – as well as the Urban League and several of the nation's largest private foundations – are coming together to launch the Digital Divide Network. The network is a clearinghouse for information on public and private efforts to bring technology to underserved communities. For the first time, America will have a one-stop shop for tracking our progress and for learning exactly what has worked and what has not.

4. **Digital Opportunity Partnership** The Leadership Conference on Civil Rights is working with many nonprofit organizations and private-sector companies to launch a new Digital Opportunity Partnership. This initiative will empower the entire civil and human rights communities through an expanded Web site (civilrights.org), leadership forums, and even "freedom riders" who will bring high-technology to the doorstep of nonprofit organizations.

5. **Congress of National Black Churches:** The Congress of National Black Churches, representing 65,000 churches and 20 million members, is sending a letter to the President acknowledging the importance of the digital divide as a key civil rights issue for the 21st century, and committing to work with the President and with industry to help close the digital divide.

The importance of bridging the digital divide

Access to computers and the Internet and the ability to effectively use this technology are becoming increasingly important for full participation in America's economic, political and social life. People are using the Internet to find lower prices for goods and services, work from home or start their own business, acquire new skills using distance learning, make better informed decisions about their healthcare needs, and get more involved in the education of their children by communicating more frequently with teachers.

Access to computers and the Internet has exploded during the Clinton-Gore Administration. Unfortunately, there is strong evidence of a "digital divide" – a gap between those individuals and communities that have access to these Information Age tools and those who don't. In some instances, this divide is actually widening. A July 1999 report from the Department of Commerce, based on December 1998 Census Department data, revealed that:

- Households with incomes of \$75,000 and higher are more than *twenty times* more likely to have access to the Internet than those at the lowest income levels, and more than *nine times* as likely to have a computer at home.
- Households with a bachelors' degree or more are more than eight times likely to have a computer than those households at the lowest education level.
- From 1994 to 1998, the percentage of white households with computers increased from 27.1 percent to 46.6 percent – while the percentage of black households with computers increased from 10.3 percent to 23.2 percent. For households with incomes above \$75,000, however, the difference between white and black adoption of computers has virtually disappeared.

Hex-Dump Conversion

President Clinton and Vice President Gore -- a strong record of accomplishment:

President Clinton and Vice President Gore have worked hard to close the digital divide, and to help create opportunity for more Americans in the Information Age. They have worked to:

Ensure that every child is technologically literate: The President and Vice President have set a goal of connecting every classroom and library to the Internet by the year 2000 -- a goal that we are on track to meet. They also have fought for investments in technology training for teachers, modern computers in the classroom, and high-quality education software. Technology in the classroom can make it easier for parents and teachers to communicate, prepare our children for the high-tech workplace of the 21st century, and help improve student performance in all academic subjects. Major Administration initiatives in educational technology include the Technology Literacy Challenge Fund, and the "e-rate." The "e-rate" is providing \$2.25 billion in 20% - 90% discounts each year to connect schools and libraries to the Internet, with the deepest discounts going to the poorest schools that need it most.

Expand the network of Community Technology Centers: The final budget deal included a tripling of support for Community Technology Centers, which provide access to technology for those who can not afford it.

Encourage the development of applications of information technology for low-income Americans: Administration grant programs have supported innovative pilot projects -- such as the use of telemedicine for prenatal care, telementoring for at-risk youth, a national computer network for local food banks, and distance learning for people who have lost their jobs.

Subject: digital divide summit, 12/9

Because of the Worcester, MA, firefighter memorial service this Thursday, the President is now NOT attending the digital divide conference, and will make his announcements in a departure statement instead. The President was scheduled to be there at 10:00 am; the VP is scheduled to leave NAVOBS at 10, has intern photo at 10:20, and has phone call/lunch time from 10:30 to 12:25. Should the VP take his place at the digital divide summit, and should we try to wrest those announcements from the WW?

Subject: Digital Divide Conference at the Commerce Department

The Commerce Department is hosting a digital divide conference tomorrow with business and civil rights leaders. The President was scheduled to address the group, but due to a change in scheduling, will now meet with a few conference participants at the White House tomorrow morning. The list of participants is found below.

As for the conference, I had also asked to put some people in only to learn that the conference is full. After checking with them, I learned that the majority of our important business contacts had been invited, and I assume that the majority of the important civil rights organizations were outreached to. If there are certain groups you want to make sure were invited, please give me a call and we'll check with Commerce. Thanks.

Hi!

Nice to run into you today. The overall contact at NTIA for the Digital Divide Summit is Jeff Joyner at jjoyner@ntia.doc.gov or 482-1816. However, since the conference is sold out, your best bet may be to get on the White House VIP list. I don't know if someone over here is coordinating that list. The person at DOC is Lucie Naphin, Director, Office of Business Liaison. She can be reached at lnaphin@doc.gov. Since the White House press corp is no longer attending, there should be some additional seats. Please let me know what you find out about the President's announcement. Thanks!

Elizabeth

TEXT:
Tom,

Some of our Silicon Valley friends provided the information below. I've re-drafted it so that you can weave bits and pieces into the President's remarks and/or briefing materials for the Digital Divide conference, as appropriate.. It speaks to tapping more fully into human resources in the minority community. This is very consistent with the President's New Market messages, as well.

At some point -- possibly during or as follow-up to your meetings today with the high-tech CEOs -- you might challenge them to commit to better recruiting of minority technology workers, especially those trained in the military. The President could make this challenge, just as he challenged industry to step up to the plate on the welfare-to-work issues.

I'm at your service if you need more information/assistance.

Lori

The African-American and Hispanic-American presence in the computer industry is a national asset. Innovators like Roy Clay Sr., who started

computer R&D at Hewlett Packard in 1965 and Marc Hannah, who developed the Geometry Engine at Silicon Graphics, or Dr. Philip Emeagwali, who set a record for the fastest computation ever, are part of a wave of 770,000 blacks and Latinos who currently work in some computer-related occupation. Silicon Valley companies have only just begun to tap into this vital resource, employing some 17,000 blacks and Latinos according to the latest study of EEO-1 reports filed from those firms. Even as companies seek to draw talent from overseas, we encourage them to also look to areas like Oakland, East Palo Alto and Richmond, California for accessible and readily trainable talent. One potential labor pool that is widely overlooked are technology workers trained in the military who have since left service. We need only look at people like Adm J. Paul Reason, commander of the Atlantic Fleet, who holds a masters in computer systems engineering, or Lt. Gen. Joe N. Ballard, commander of the U.S. Army Corps of Engineers, to know that the same talent pool that supplies a third of our armed forces can deliver in these high tech industries.

Subject: Comments for the Digital Divide Conference

Dear Tom,

The Asian and Pacific Islander community shared with me today some of their issues related to the digital divide. Tessie Guillermo will be representing that group on the Secretary's roundtable for the Dec. 9 conference.

The issues are noted below. I hope some of this will be helpful to you in crafting the President's remarks. Clearly, it is a constituency that is frequently overlooked and it would be nice for the President to acknowledge the "divide" issues that are somewhat unique to this community.

Thanks,

Lori

To: Lori A. Perine/OSTP/EOP

1-Asian and Pacific Islander American communities are relative newcomers to the public policy debate on technology access but for some time now, leaders and advocates have been concerned about the impacts of technology, competition and the growing gaps between those who have ready access and those who don't. Of primary concern to all communities of color, is how the gap between the economically rich and poor will be increased by the creation of a new societal tier of information rich and information poor. For communities who have not been empowered for long, this won't even get them to the starting gate.

2-Clearly, underserved, underrepresented communities are interested in the evolution of telecommunications and especially in one of the major equity issues under debate today* the growing gap between those who have and those who don't; between those who have been allowed to participate from the beginning and those who are just starting to exercise their rights.

3- In order to fully participate in a democratic society, all communities need access to the full array of technological tools that bring the information superhighway to their communities, schools, and businesses- at the same time, in the same place, and under the same rules. For too long, policy-makers have overlooked the Asian and Pacific Islander American population, particularly, those segments who are most severely in need. APIAs are seldom included in major social or economic impact studies as well as educational outreach efforts.

4- This "invisible" population, however, counts for more than 11 percent of California's population. Forty percent of the entire U.S. APIA population resides in California and of that number, 73.3 percent speak a language other than English.

5- Less than 3/10ths of 1% of all philanthropic dollars goes to the broader APAI community- much less goes to linguistically or socially isolated, low income immigrant groups such as Hmong, Laotian, Cambodian and Pacific Islanders. These groups remain off the radar screen of industry leaders, legislators and policymakers. They represent the lowest end of the social/economic spectrum for Asian and Pacific Islander communities.

6- By 2020, numbers of APIAs in California will increase by up to 199 percent. Forty-one percent of our children and youth, part of California's

future workforce, are newcomers to this county who face daunting obstacles to educational success. By the turn of the century, an expected 75 percent of Asian and Pacific Islander Americans ages three to 24 years will be immigrants, or children of immigrants who arrived after 1980. Many of these children will come from low income, limited English speaking households and are part of a generation of disadvantaged children who stand to lose if left behind in the information age.

7- Community access to technology and universal service should be seen as public priorities for the future of this nation. That's why Asian Pacific American community leaders and organizations like the Community Technology Foundation of California are keeping their eyes on the prize. It's not enough to fund miscellaneous projects or donate used computers. Industry and government leaders must work with the nonprofit sector to allow the full participation of APIA and other diverse communities at all levels of telecommunications-related public policy and decision-making.

Subject: Digital Divide Memorandum

MEMORANDUM FOR THE HEADS OF EXECUTIVE DEPARTMENTS AND AGENCIES

SUBJECT: NARROWING THE DIGITAL DIVIDE, CREATING OPPORTUNITIES FOR ALL
AMERICANS IN THE INFORMATION AGE

Information tools, such as the personal computer and the Internet, are increasingly important to economic success and full participation in all aspects of American society. People with computers and Internet access can use these tools to find a job, acquire new skills, start a small business, get lower prices for goods and services, and become more informed citizens.

Currently, not all Americans are enjoying the benefits of the Information Age tools. In July 1999, the National Telecommunications and Information Administration issued a report, Falling Through the Net: Defining the Digital Divide, which found a growing gap between those with access to these tools and those without. Black and Hispanic households are

two-fifths as likely to have Internet access as white households. Furthermore, households with incomes of \$75,000 and higher, in urban areas, are more than twenty times as likely to have access to the Internet than those at the lowest income levels, and more than nine times as likely to have a computer at home. As information technology plays an ever-increasing role in Americans' economic and social lives, we cannot afford to leave anyone behind.

Fortunately, competition and advances in technology are driving down the cost of computers and Internet access, which will make these new Information Age tools affordable for more Americans. I believe that we should set a national goal of making computers and Internet access available for every American. Furthermore, we should explore ways of using technology to expand the economic opportunities for those Americans who have not yet enjoyed the benefits of our prosperity.

Accordingly, I am directing executive departments and agencies (& agencies 8) to take the following specific actions to assist Americans to benefit from advances in information technology:

1. abThe Secretary of Commerce shall work with the private sector and others to develop a national strategy for making access to computers and the Internet available for all Americans, with the goal of significantly narrowing the "digital divide".
2. The Secretary of Commerce shall continue to measure the level of connectivity of Americans to telecommunications and information tools, and report periodically on the relationship of income, education, race, gender, geography, and age to Americans' access to these tools.
3. abThe Secretaries of Education, Housing and Urban Development, Health and Human Services, and Labor shall:
 - (a) expand our growing network of Community Technology Centers to provide access to technology for those Americans that can't afford it; and
 - (b) encourage the development of information technology applications that would help empower low-income Americans start and manage their own small businesses.
4. The Secretaries of Education and Labor shall work with the private sector to upgrade the information technology skills of America's workforce, particularly workers living in disadvantaged urban and rural communities.
5. The Secretary of Commerce, the Secretary of Education, and the Secretary of Housing and Urban Development shall highlight and disseminate the lessons learned from their grant programs and educational technology initiatives, with an emphasis on underserved citizens, to increase the number of communities across the nation that could reap the benefits of information technologies for their residents.
6. Items 1-5 of this memorandum and my July 1, 1997 and November 30, 1998 memoranda shall be conducted subject to the availability of

appropriations and consistent with agencies , priorities and my budget, and to the extent permitted by law.

7. The Vice President shall continue his leadership in coordinating the United States Government's electronic commerce strategy. Further, I direct that the heads of executive departments and agencies report to the Vice President and to me on their progress in meeting the terms of this memorandum, through the Electronic Commerce Working Group in its annual report.

Subject: Comments for the Digital Divide Conference

Dear Tom,

The Asian and Pacific Islander community shared with me today some of their issues related to the digital divide. Tessie Guillermo will be representing that group on the Secretary's roundtable for the Dec. 9 conference.

The issues are noted below. I hope some of this will be helpful to you in crafting the President's remarks. Clearly, it is a constituency that is frequently overlooked and it would be nice for the President to acknowledge the "divide" issues that are somewhat unique to this community.

Thanks,
Lori

1-Asian and Pacific Islander American communities are relative newcomers to the public policy debate on technology access but for some time now, leaders and advocates have been concerned about the impacts of technology, competition and the growing gaps between those who have ready access and those who don't. Of primary concern to all communities of color, is how the gap between the economically rich and poor will be increased by the creation of a new societal tier of information rich and information poor. For communities who have not been empowered for long, this won't even get them to the starting gate.

2-Clearly, underserved, underrepresented communities are interested in the evolution of telecommunications and especially in one of the major equity issues under debate today* the growing gap between those who have and those

who don't; between those who have been allowed to participate from the beginning and those who are just starting to exercise their rights.

3- In order to fully participate in a democratic society, all communities need access to the full array of technological tools that bring the information superhighway to their communities, schools, and businesses- at the same time, in the same place, and under the same rules. For too long, policy-makers have overlooked the Asian and Pacific Islander American population, particularly, those segments who are most severely in need. APIAs are seldom included in major social or economic impact studies as well as educational outreach efforts.

4- This "invisible" population, however, counts for more than 11 percent of California's population. Forty percent of the entire U.S. APIA population resides in California and of that number, 73.3 percent speak a language other than English.

5- Less than 3/10ths of 1% of all philanthropic dollars goes to the broader APAI community- much less goes to linguistically or socially isolated, low income immigrant groups such as Hmong, Laotian, Cambodian and Pacific Islanders. These groups remain off the radar screen of industry leaders, legislators and policymakers. They represent the lowest end of the social/economic spectrum for Asian and Pacific Islander communities.

6- By 2020, numbers of APIAs in California will increase by up to 199 percent. Forty-one percent of our children and youth, part of California's future workforce, are newcomers to this county who face daunting obstacles to educational success. Subject: Digital Divide Conference

Hi!

Nice to run into you today. The overall contact at NTIA for the Digital Divide Summit is Jeff Joyner at jjoyner@ntia.doc.gov or 482-1816. However, since the conference is sold out, your best bet may be to get on the White House VIP list. I don't know if someone over here is coordinating that list. The person at DOC is Lucie Naphin, Director, Office of Business Liaison. She can be reached at lnaphin@doc.gov. Since the White House press corp is no longer attending, there should be some additional seats. Please let me know what you find out about the President's announcement. Thanks!

Elizabeth
