Soil Conservation Service

## Soil Conservation Service

**Possible national service tasks:**

Water quality assessments - Team members can conduct samplings and provide technical help with delivery systems. They can also work on sanitation and sewerage (wastewater treatment) system improvement.

Environmental education - Team members --- going door-to-door, working in schools and speaking at civic clubs --- could teach a wide variety of topics: safe handling of food, how to make your household more eco-friendly, testing for radon.

Energy Conservation- Team members could work in crews to provide the physical assistance in weatherizing homes and generally making them more energy efficient. Participants could work in public housing and low-income areas in both urban and rural communities. Team members would need basic training in carpentry, electrical or plumbing skills. We would recruit professional carpenters, electricians, and plumbers to help with basic training or to serve as team leaders.

Environmental audits - Team members could provide help similar to the that of the Extension Service's and the Soil Conservation Service's joint Farm-A-Syst program.

River and Streams Protection - We could possibly run river protection teams in conjunction with the Environmental Protection Agency. In a Hudson River Team, USDA participants could work with farmers in the river's watershed to reduce the run-off of agricultural pesticides.

Urban Conservation Projects - These would work very closely with Assistant Secretary Lyon's urban environmental initiative.

Urban Farming Projects - Team members could help low-income urban residents to grow their own food. We could possibly run such a program at public housing complexes in tandem with the Department of Housing and Urban Renewal. We could possibly run a city-wide program in Chicago in tandem with the Chicago high school of agriculture.

Wetlands Restoration - The Department of Interior and the Environmental Protection Agency have expressed interest in potentially running a joint program to help restore the Everglades.

Disaster Relief and Recovery - Existing youth corps have played a vital role in the recovery of the flooded Midwest. For most disasters, team members could provide physical labor so critical to short-team clean-up, as well as human services needed for long-term recovery. They could also assist in some of the long-term infrastructure repair such as levee re-building.

Sustainable Agriculture - Team members could work under the direction of Extension agents or other sustainable agriculture experts to help local farmers complete some of the labor intensive work -- such as constructing fences -- that is needed to implement a sustainable agriculture plan.

Rural Development - The Rural Development Team would establish regional clusters of "professional" and "paraprofessional" participants who could assist communities in identifying needs and resources necessary for economic well-being. The participants would have diverse education and training and would be matched up with individual communities or regions that have specific needs that can be filled by someone with that specific background.Individuals will be placed in communities where their particular talents can be best utilized. Experts in connecting rural homes to municipal water systems will be matched up to areas with that need. Experts in tourism will be matched up with communities that want to develop their tourism. Experts in sustainable agriculture will be matched up with groups of farmers who need technical assistance in that area. Experts in grant writing will be matched up with communities that need grant writing. Experts in attracting small businesses will be matched up with communities that want to attract more small business. Experts in watershed protection will be matched up with areas that need such help. General planners would also be matched up with communities that need to develop overall economic plans.

Small Business Plan Developer and Information Broker - Assists in the assessment and development of markets for unique local products.

Regional Circuit Rider - Works part time in a number of towns in a region. Provides technical assistance to communities throughout a region in brokering, strategic planning, and community assessment.

Watershed Assistance Process Facilitator - Works to coordinate local watershed protection programs in order to save wetlands, guard drinking-water quality, and prevent flooding. The team member would explain watershed assistance programs, identify key potential participants in local watershed steering committees, arrange local organizational meetings, and facilitate the identification of watershed needs, problems, and concerns.

Recreation Specialist - The team member would provide technical assistance for all activities relating to recreation and tourism, including coordinating efforts among all government agencies, furnish recreation planning and design, and collect and disseminate information on what alternatives will best fit local needs.

Soil Conservation Service Volunteer Coordinators - The team member would recruit and supervise adult and youth volunteers from local communities to work on Soil Conservation Service "Earth Team" volunteer projects.

Disaster Relief and Recovery - Existing youth corps have played a vital role in the recovery of the flooded Midwest. For most disasters, team members could provide physical labor so critical to short-team clean-up, as well as human services needed for long-term recovery. They could also assist in some of the long-term infrastructure repair such as levee re-building.

Sustainable Agriculture Advisor - Works with farmers in the region to help them develop model sustainable agriculture farms. Directs 4-H volunteers to perform some of the labor intensive work, such as fence-building, needed for successful sustainable farming.

Natural Resource Specialist - Under the direction of a Soil Conservation Service professional employee, the team member would work in low-income and socially disadvantaged areas to assistant in the acceleration of watershed protection, work with field engineers in the design and layout of community projects, and work with the local Resource Conservation & Development(RC&D) Coordinator for economic development for disadvantaged groups.

Landscape Architect - The team member would work with soil conservation districts, RC&D councils, and area conservationists to coordinate and include landscape architectural planning for the purpose of maintaining, enhancing, or restoring ecological, social, and economic conditions.

AUTHOR OF LANDMARK LAW

SCS

# Federal soil position likely to go to Johnson of Iowa

By KENNETH PINS
OF THE REGISTER'S WASHINGTON BUREAU

**Washington, D.C.** — Paul Johnson, the Decorah farmer and former state legislator who wrote Iowa's landmark 1987 ground-water protection law, is expected to be named chief of the U.S. Soil Conservation Service in the next few weeks.

Johnson's appointment has been widely expected, but it was held up this fall when Arkansas rice and southwestern cotton and cattle interests objected.

"I think we're past that," Garth Youngberg of the Henry A. Wallace Institute for Alternative Agriculture said recently. Johnson worked at the Wallace Institute this past summer.

The candidate put forth by Arkansas rice interests for SCS chief is now expected to be named to the White House agriculture adviser's job instead.

For the past several weeks, Johnson, 52, has been working as a special assistant in the Soil Conservation Service. He was traveling Friday, and an SCS spokeswoman said there still has been no final word on the appointment.

While Johnson's appointment could conceivably be derailed by the White House personnel office, most in the soil conservation community now see it as assured.

"We think it's a first-rate appointment," said Max Schnepf of the Soil and Water Conservation Society in Ankeny. "He's in a perfect spot to do the necessary bridging between the farming community and environmentalists."

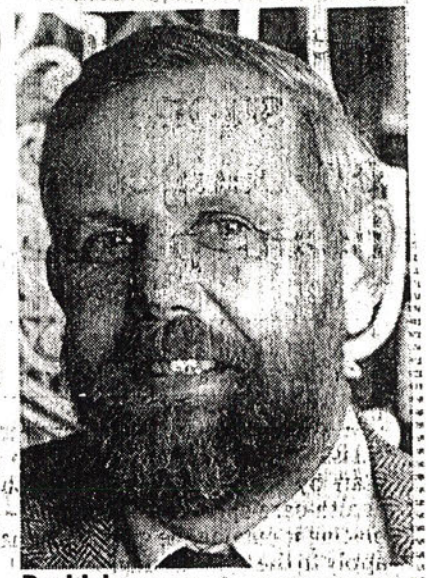

Mark Maslyn of the American Farm Bureau Federation agreed. "I don't have the sense that he's an ideologue of any sort," he said.

Maslyn noted that the ground-water protection bill authored by Johnson is more measured than some, focusing on managing applications of chemicals and fertilizer in crop production through science rather than seeking outright bans.

The Soil Conservation Service chief will play a key role in several coming battles, including reauthorization of the Clean Water Act next year and formulation of the 1995 farm bill as Congress tries to balance conservation and production goals.

Just last month, the National Academy of Sciences recommended a national effort to protect soil quality and reduce erosion, as well as prevent farm chemical runoff. Johnson is a member of the National Academy of Sciences board of scientists.

What's more, the Agriculture Department is going to have to decide what to do with Conservation Reserve Program contracts that are now expiring, and the Clinton administration has given the SCS sole jurisdiction over identifying wetlands on farms.

**Paul Johnson**
*Former Iowa legislator*

Johnson has a master's degree in forestry from the University of Michigan, and he served with the Peace Corps in Ghana. In the 1970s, he moved to rural Decorah, where he was a dairy and grain farmer.

SCS

POLICY

# SCS chief shakes up farming status quo

By SONJA HILLGREN

■ Iowa farmer and former state legislator Paul Johnson walks into his new job as Soil Conservation Service (SCS) chief with one Red Wing work boot planted in the agricultural camp and his other boot in the environmental camp.

"He's not by any means what I'd call mainstream agriculture, from what I've heard," says Ron McCartney, an Elgin, Iowa, farmer. "Somewhere we need to have a bridge to environmentalists. Is Paul Johnson the man? I don't know."

Ken Cook, president of the Environmental Working Group, who will evaluate Johnson on conservation compliance enforcement, says, "I think he's good for farmers. He's going to make it less polarized. There may be times when we strongly disagree with him."

PHOTO: JIM HEEMSTRA/PICTURE GROUP, INC.

**IN THE LATE 1980s, PAUL JOHNSON earned the title of "Godfather of Groundwater" when he pushed passage of Iowa's tough water laws through the state's General Assembly. In his new role as SCS chief, Johnson may be uniquely qualified to bridge the gap between agriculture and environmentalists.**

**Optimists believe Johnson** will serve farmers' interests uniquely by convincing environmentalists and their allies in Congress to trust SCS rather than EPA to oversee future environmental programs affecting farmers. Says Johnson, "SCS has a proud history of working in these areas."

Johnson brings to his new job Peace Corps service, graduate studies in forestry, ecology and soils just short of a Ph.D. and periodic jobs at Luther College. Add to that two decades of producing milk, grains, soybeans, Christmas trees and a few sheep on a hilly, stream-laced farm atop environmentally sensitive karst near Decorah, Iowa.

During six years in the Iowa General Assembly, Johnson spearheaded Iowa laws taxing fertilizers at the rate of about a nickel an acre and raising registration fees on pesticides. His goal was to finance research, education and demonstrations as alternatives to regulating farmers.

"He brought to the forefront some issues that weren't very popular at the time," says Evan Stadlman, executive director of the Iowa Corn Growers Association. "He helped put Iowa in a better situation than other states in dealing with water quality."

Johnson spearheaded establishment of the Leopold Center for Sustainable Agriculture at Iowa State University, as Johnson describes it, to bridge the "gap between conventional and sustainable agriculture." The center was named after Aldo Leopold, a conservation leader of the 1930s and 1940s who believed farmers had an obligation to the land and society beyond economics. This past summer Johnson worked at the Henry A. Wallace Institute for Alternative Agriculture near Washington.

Such unusual accomplishments convinced Agriculture Secretary Mike Espy to pick Johnson over Marion Berry, an Arkansas farmer who instead is President Clinton's agricultural assistant in the White House.

In the mid-1980s, Johnson's Iowa record caught the attention of Charles Benbrook, former head of the National Research Council's (NRC) Board on Agriculture. Johnson became the first farmer ever to serve on the board. The NRC recently issued a report—that includes work from Johnson, as well as Deputy Agriculture Secretary Richard Rominger and former EPA and USDA official Jim Moseley—that could be a blueprint for soil and water conservation policies under Johnson.

WATER QUALITY

The report goes beyond long-standing concerns about soil erosion to a broader agenda of improving soil quality and understanding soil's influence on water quality. "I think there will be a realization that we manage soil for a number of purposes," says Johnson. This expanded perspective is one of "many forces that are making us think of more holistic farm planning."

**Johnson's agenda in Iowa** ruffled feathers. The state's fertilizer and pesticide dealers felt they received too little credit for their genuine concern about pollution. After all, the industry endorsed higher fertilizer taxes for research and nitrogen testing in 1985, before Johnson's bills were enacted.

After the industry opposed Johnson's 1988 reelection, fertilizer and pesticide dealers finally sat down with Johnson. "People left the meeting surprised," says Dan Frieberg, executive vice president of the Agribusiness Association of Iowa. "They left with a much better understanding and appreciation of Johnson's agenda. On many issues now, we're not far apart at all."

In late 1991, academic, SCS, state, Extension and industry representatives called a news conference to announce proudly that Iowa farmers had fine-tuned nitrogen applications to 120 lb. per acre, compared with 159 lb. in neighboring Illinois, while maintaining comparable corn yields.

Johnson is careful to explain how much he and mainstream farmers have in common. As for low-input sustainable agriculture, he says, "It's a lot of baggage that I'd just as soon not have." ◀

# SOIL CONSERVATION SERVICE

## JOB PROPOSAL

## FOR COMMUNITY RESOURCE CONSERVATION

## SUMMER 1993

### PROPOSAL

Establish jobs and training initiatives for unemployed youth that rebuilds community infrastructure and enhances areas where people live and play, to ensure that these communities are economically, socially and environmentally acceptable.

### PURPOSE

To create jobs and educational experiences that are natural resource based and environmentally sensitive for unemployed youth and young adults. The result will be more sustained and viable communities. These jobs will involve activities such as rehabilitation and maintenance of deteriorating community infrastructure, road bank stabilization, erosion control, decreasing run-off, improving water quality, and creating urban buffers.

### BACKGROUND

The Soil Conservation Service was created in the 1930's to control erosion and carry on many of the ongoing conservation efforts of Civilian Conservation Corps projects.

This youth job initiative is an "off spring" of the 1930's which produced watershed restoration and other conservation work in the U.S. Forest Service, Soil Conservation Service, Tennessee Valley Authority, the Works Progress Administration and Civilian Conservation Corps. The revival of such an initiative from its initial introduction in the 1930's has been made possible by the return of the Conservation Corps with support of local, state, or federal means. Labor intensive natural resource and environmentally sensitive restoration projects could be implemented. An investment in the youth initiative through the Conservation Corps would meet a critical need of addressing natural resource problems and providing an inexpensive labor base for natural hazards emergency work involving protection and recovery from fires, floods, earthquakes, and hurricanes.

SCS has the responsibility through local Soil and Water Conservation Districts and local officials for providing technical assistance for the planning and application of conservation practices on non-federal lands. By using the present outreach structure, through Soil and Water Conservation Districts, (S&WCD), Resource Conservation and Development (RC&D) Councils, Watershed Districts, Tribes, School Districts, and other Units of Governments, SCS can deliver a natural resource program aimed at creating jobs for youth.

SCS programs include natural resource planning and the application of conservation systems to solve identified resource problems. Such systems may include establishing needed vegetation for erosion control to water management and control measures for water quality improvement.

Natural resources in many communities are poorly managed. Steep areas are frequently scarred with erosion, and streams and wetland areas are frequently damaged by flooding and marred with sedimentation. Development of housing areas, shopping centers, roads, and other facilities often introduces serious erosion and sedimentation problems, especially during the construction development period. Fish and wildlife habitat and recreation opportunities have been degraded in many of these areas.

The effects of these kinds of problems are costly, not only economically, but socially and environmentally. These costs are actually worsened by lack of regularly scheduled maintenance. As natural areas are allowed to deteriorate, they become increasingly costly to maintain and restore. As the aesthetics of these areas decline, they engender a decline in community pride as well as a decline in surrounding land values and tax base. Instead of providing for healthy recreation, they spawn illicit activities that create fear in the neighboring population. These problems tend to escalate as the condition gets worse, and the perception increases that the situation is beyond hope.

CURRENT SITUATION

There are about 200 urban areas with over 100,000 people in residence. Most of these have serious problems with unemployment and many have problems with at least one degraded natural area. Enrolling about 12,500 young men and women in a summer jobs program at $6 per hour would cost about $50 million in wages per year. Providing work facilities, equipment, planning, design, contracts for minor construction projects, supervision, and on-the-job training would probably cost about $8 million, for a total of about $58 million.

OBJECTIVE

The educational and training services provided by SCS would increase the awareness of youth and adults participating in the Conservation Corps (CC) about the importance and value of their work. Their understanding of the inter-relationships of soil, water, plants, and animals would be enhanced. These services would instill and enhance an environmental conservation ethic in communities. Six objectives have been established to guide the CC. These are:

1. Promote multi-objective floodplain management to reduce damages in flood prone communities.

2. Revive labor intensive environmental restoration technologies and programs and develop new restoration and watershed management methods which restore the natural functions of streams and associated wetlands.

3. Advance riparian restoration methods designed to assist in recreating the dynamic equilibrium of streams and rivers.

4. Promote community stream and river "greenways" which provide critically needed open space and, in some cases, inner-city pocket parks in densely populated areas.

5. Expand the focus of national and state clean water programs from reduction of point and non-point pollution discharges to controlling the sources of pollution by using integrated watershed management strategies.

6. Administer stream improvement programs in a manner which addresses the needs of the most socially and economically disenfranchised communities, and integrates the needs and involvement of the country's diverse cultures.

PROPOSED ACTION

SCS would administer a grant program through local community-based organizations, conservation districts, watershed councils, or incorporated non-profit corporations. The grant funds will be used to employ youth and other disadvantaged community youth for jobs.

To contribute to national programs that create jobs and enhance the natural environment, especially in urban areas, SCS proposes work with community governments to initiate and manage a community conservation program.

These programs would be developed in cooperation with natural resource management agencies in community governments. These agencies would be required to share in the costs of the initial restoration phase of the program.

The community governments would be expected to share in providing incentives to high school dropouts and young adults to encourage them to enroll in the program and participate in both work and education activities.

When cooperative agreements are entered into with governments, SCS could provide scientific, technical, and educational services and some financial assistance to support natural resource conservation projects in the communities that organize programs.

SCS services could include:

- providing technical advice regarding the adequacy of landscape plans, erosion control structure plans, storm runoff storage and conveyance plans, etc.
- providing designs and construction plans for conservation measures,
- developing contracts and contractual arrangements,
- providing onsite supervision of construction,
- providing protective equipment,
- providing materials and supplies,
- providing tools,
- providing training.

DIVISION OF RESPONSIBILITIES

This job program will follow policies and procedures developed for the federal summer job creation program.

Eligible projects will be determined by local officials based on federal guidelines, with support from SCS.

Priority for project funding will be based on:

- Project location in low income or economically depressed areas
- Potential for improving natural resources
- Potential for creating future employment
- Potential for training
- Potential for employing the services of ethnic minorities, including Native Americans
- Local support for the project
- Long term benefits
- Number of summer jobs created

PROPOSED BUDGET

I. The Soil Conservation Service would administer a grant program through local community based organizations, conservation districts, watershed councils, or incorporated non-profit organizations. The grant funds will be used to employ youth for jobs and job training.

| Cost | Staff | Jobs created |
|---|---|---|
| $50 million | 8 FTE | 12,500 |

II. Develop a CETA type program approach with grants to RC&D Councils and S&WCD for administrative costs, and the purchase of supplies and materials.

| Cost | Staff | Support services for |
|---|---|---|
| $ 8 million | 150 FTE | 12,500 jobs |

AGENCIES CONCERNED

| | SCS | Sponsor | Schools | Social Service Agency |
|---|---|---|---|---|
| Identify participants | | A | L* | L* |
| Selection and hiring | | L | A | A |
| Education | A | A | L | |
| Identify projects | A | L | | |
| Planning projects | L | A | | |
| On the job training | L | A | A | |
| Supervision of youth on site | L | A | | |
| Administration | A | L | | |
| Funds | G | R | | |

L = lead role
A = assisting role
G = granting funds
R = receiving funds

*Leadership is split, because those youth who are not in school should be targeted by social service agencies.

United States Department of Agriculture

**Soil Conservation Service**

# The Earth Team Volunteer Program

THE job of conserving America's renewable resources cannot be accomplished by government alone. The collective talents and energies of private individuals and groups are needed.

In recognition of the interest and skills many Americans have in conservation and the environment, Congress passed legislation–Section 1526 of PL 97-98, Food and Agriculture Act–in 1981 permitting agencies of USDA to use volunteers to accomplish their missions. The Soil Conservation Service utilized this authority to establish the Earth Team Volunteer Program.

Today, individual Earth Team volunteers work in concert with SCS and Conservation Districts across the country. They also work on special projects through cooperative agreements with other partners such as the Environmental Protection Agency, General Federation of Women's Clubs, Ruritan National, Izaak Walton League, National Council of Catholic Women, Soil and Water Society of America, and State Conservation Agencies.

The primary purpose of the Earth Team is to provide opportunities for people interested in conservation activities who want to work alongside professionals in their own communities. The use of volunteer resources also effectively expands services to our customers.

Earth Team volunteers bring special talents and enthusiasm that help SCS in its mission of natural resource conservation.

The 10,000 members of the Earth Team contributed 500,000 hours of service to SCS in 1,800 offices in 1992. In dollars, that effort represents a $5 million donation. Specifically, in our National Headquarters, 90 volunteers donated over 10,000 hours.

Earth Team volunteers have been a tremendous help with the effort to help farmers retain USDA program eligibility under the 1985 and 1990 Farm Bills. They fill in and provide support to the SCS workforce whenever and wherever needed. They do everything from assisting with design and layout of best management practices, to computer inputting and programming, providing public information and conservation education.

Here are some examples of our diverse Earth Team volunteer activities and how they are helping SCS and their conservation partners realize their vision:

Earth Team Volunteer Robert Carlon, a student at Virginia Tech University, spent his summer vacation working to help the Dinwiddie, VA SCS office tackle a heavy Farm Bill workload. By assisting with surveying, design and construction of grass waterways, critical area seeding, making highly erodible land determinations, and entering data in the computer, Robert enabled the SCS office to service more clients. Robert plans to return again next summer as a volunteer.

Dr. Dunstan Hayden is a professor of mathematics at Northern Virginia Community College. As an Earth Team volunteer, he is developing educational tools that can be utilized in environmental education learning areas.

April Wilhelm, who has an undergraduate degree in agronomy, a Master's degree in soils and is a certified elementary school teacher, is volunteering her time with SCS in Washington, DC to develop conservation education materials.

Charles Koch, a former state soil scientist, who retired from SCS over 20 years ago, is using his talents as an Earth Team volunteer to develop a computer database of all of the soils in Virginia's published soil survey reports.

Brian Engelbrecht was in a coma for three months when a blood vessel burst at the base of his brain. Following three brain surgeries and years of therapy, Brian, now 25 gets around in a wheelchair and devotes four days a week working for the Earth Team. Now able to stand with the aid of crutches, Brian performs a multitude of clerical duties, data entry and special projects in the SCS office in Columbia, MO. He was selected "Outstanding Volunteer of the Year in Missouri," chosen from a field of 1,100. Brian said, "I'm doing something rather than sitting home all day. I feel like I'm earning the disability income I receive from the government. In my own way, I'm giving something back."

High School students from West Platte High School in Weston, MO. volunteer to help plant trees in the SCS Plant Materials Center to restock the trees removed the previous year for use in windbreaks. Their teacher views the students' involvement as an extension of their classroom learning. "It's a real benefit to the students anytime you can add hands-on experience to what they've been reading about in books. They can see the benefits. The Earth Team program gives some of the students who aren't as strong academically

the chance to feel a sense of success through their volunteer work."

In Perry County, Alabama, local high school students volunteer to design best management practices. The agribusiness instructor teaches his students about ways to protect soil and water resources in the classroom. These students, as Earth Team volunteers, are provided an opportunity after school to assist landowners in design, layout and construction of conservation and water quality practices. A direct result of this exposure to conservation is that the students have developed a strong interest in agriculture. Several who would not have otherwise done so, have attended college to obtain a degree in some field of agriculture with the ultimate goal of working for the Soil Conservation Service.

Alice Teal became an Earth Team volunteer in 1986 in Greenwood, Mississippi. Since that time she has contributed about 4,000 hours. Alice is a victim of myostitis ossifican. Her entire body is immobile except for her hands and her wrists. When the SCS staff has to be away from the office, they transfer their calls to Alice's home. By a special device on her telephone, she answers the phone, dials and takes messages as part of her volunteer service. Many compliments concerning her pleasing telephone personality and her desire to provide assistance have been received.

Residents of the Presque Isle Nursing Home in Maine served as Earth Team volunteers to assist the Aroostook SCS office assemble, fold, label and stamp about 2,000 newsletters issued quarterly by the Aroostook Resource Conservation and Development office. This unique group helped the Soil Conservation Service while satisfying their own need to do something useful and active. In less than a year they cheerfully volunteered more than 800 hours.

Court referred volunteers are persons referred to volunteer jobs by judges who feel it is more therapeutic for them to do volunteer services than to sit behind bars. A lawyer sentenced to community service, was instrumental in setting up several computer databases. A biology major at a local college performed his community service by transferring soils data to National Resource Inventory worksheets. Many court referred volunteers continue to volunteer for SCS after they have completed their sentences.

In Limestone County, Alabama, inmates from the local prison serve as Earth Team volunteers to assist SCS in laying out best management practices.

Many volunteer stories have happy endings. Paul Reich came to the Soil Survey Division, National Headquarters, as a student at the University of Maryland, Baltimore Campus. He liked the work so well that he continued volunteering after he had received his academic credit for interning. After graduation, SCS hired him on a temporary basis to maintain a global computer database on soil temperature and carbon and the use of a geographic information system in the watershed area of Java.

Ginny Cohn came to SCS after graduating from Stanford University with a masters degree in Land Resource Planning. She had researched a report at the SCS field office in Gilroy, CA, learning about the agency at that time. Upon coming to Washington, DC, she learned about the Earth Team and decided that volunteering would be an excellent way to gain experience while job hunting. She began her volunteer work with SCS working on farmland protection issues. Her superior work led to temporary employment. Ginny is on her way to her long-term goal to help communities in preventing and dealing with natural disaster.

Georges Aguehounde, a native of the Ivory Coast, had just graduated from Southeastern University with a Master's degree in Finance and Banking when he was left totally paralyzed by a hit and run driver. After spending one year in the hospital, he regained some movement in both arms. His rehabilitation specialist referred him to Job Match, an organization for people with disabilities. It was suggested that he become a part-time volunteer. Job Match referred Georges to SCS and he began coming into National Headquarters two or three days a week. He reviewed literature for the Senior Staff Analyst, saving many hours of reading which could be spent on more pressing priorities. With the staff's understanding and patience, Georges' skills increased and he gained strength and dexterity. He began to write faster and more legibly and to use the word processor, using a stylus. He learned to handle the telephone by himself, which was previously impossible. Today, Georges has a part-time job as a bookkeeper for a local business. He still keeps in touch with SCS.

Students from Galludet University, a school for hearing impaired, such as Lauren Blair, come to SCS to share their expertise in computer graphics while adapting to an office environment.

There has never been a better time for Earth Team volunteers. The energy, excitement, dedication and skills they bring to the job are vital to addressing our nation's environmental concerns. The Soil Conservation Service takes every opportunity to include Earth Team volunteers as part of their professional team. Special thanks and recognition is the most important reward we can give these volunteers—but the most important benefactor of their work is the environment. ■

Call 1-800 THE SOIL for additional information.

**Soil Conservation Service**

# The Earth Team Volunteer Program

THE job of conserving America's renewable resources cannot be accomplished by government alone. The collective talents and energies of private individuals and groups are needed.

In recognition of the interest and skills many Americans have in conservation and the environment, Congress passed legislation–Section 1526 of PL 97-98, Food and Agriculture Act–in 1981 permitting agencies of USDA to use volunteers to accomplish their missions. The Soil Conservation Service utilized this authority to establish the Earth Team Volunteer Program.

Today, individual Earth Team volunteers work in concert with SCS and Conservation Districts across the country. They also work on special projects through cooperative agreements with other partners such as the Environmental Protection Agency, General Federation of Women's Clubs, Ruritan National, Izaak Walton League, National Council of Catholic Women, Soil and Water Society of America, and State Conservation Agencies.

The primary purpose of the Earth Team is to provide opportunities for people interested in conservation activities who want to work alongside professionals in their own communities. The use of volunteer resources also effectively expands services to our customers.

Earth Team volunteers bring special talents and enthusiasm that help SCS in its mission of natural resource conservation.

The 10,000 members of the Earth Team contributed 500,000 hours of service to SCS in 1,800 offices in 1992. In dollars, that effort represents a $5 million donation. Specifically, in our National Headquarters, 90 volunteers donated over 10,000 hours.

Earth Team volunteers have been a tremendous help with the effort to help farmers retain USDA program eligibility under the 1985 and 1990 Farm Bills. They fill in and provide support to the SCS workforce whenever and wherever needed. They do everything from assisting with design and layout of best management practices, to computer inputting and programming, providing public information and conservation education.

Here are some examples of our diverse Earth Team volunteer activities and how they are helping SCS and their conservation partners realize their vision:

Earth Team Volunteer Robert Carlon, a student at Virginia Tech University, spent his summer vacation working to help the Dinwiddie, VA SCS office tackle a heavy Farm Bill workload. By assisting with surveying, design and construction of grass waterways, critical area seeding, making highly erodible land determinations, and entering data in the computer, Robert enabled the SCS office to service more clients. Robert plans to return again next summer as a volunteer.

Dr. Dunstan Hayden is a professor of mathematics at Northern Virginia Community College. As an Earth Team volunteer, he is developing educational tools that can be utilized in environmental education learning areas.

April Wilhelm, who has an undergraduate degree in agronomy, a Master's degree in soils and is a certified elementary school teacher, is volunteering her time with SCS in Washington, DC to develop conservation education materials.

Charles Koch, a former state soil scientist, who retired from SCS over 20 years ago, is using his talents as an Earth Team volunteer to develop a computer database of all of the soils in Virginia's published soil survey reports.

Brian Engelbrecht was in a coma for three months when a blood vessel burst at the base of his brain. Following three brain surgeries and years of therapy, Brian, now 25 gets around in a wheelchair and devotes four days a week working for the Earth Team. Now able to stand with the aid of crutches, Brian performs a multitude of clerical duties, data entry and special projects in the SCS office in Columbia, MO. He was selected "Outstanding Volunteer of the Year in Missouri," chosen from a field of 1,100. Brian said, "I'm doing something rather than sitting home all day. I feel like I'm earning the disability income I receive from the government. In my own way, I'm giving something back."

High School students from West Platte High School in Weston, MO. volunteer to help plant trees in the SCS Plant Materials Center to restock the trees removed the previous year for use in windbreaks. Their teacher views the students' involvement as an extension of their classroom learning. "It's a real benefit to the students anytime you can add hands-on experience to what they've been reading about in books. They can see the benefits. The Earth Team program gives some of the students who aren't as strong academically

the chance to feel a sense of success through their volunteer work."

In Perry County, Alabama, local high school students volunteer to design best management practices. The agribusiness instructor teaches his students about ways to protect soil and water resources in the classroom. These students, as Earth Team volunteers, are provided an opportunity after school to assist landowners in design, layout and construction of conservation and water quality practices. A direct result of this exposure to conservation is that the students have developed a strong interest in agriculture. Several who would not have otherwise done so, have attended college to obtain a degree in some field of agriculture with the ultimate goal of working for the Soil Conservation Service.

Alice Teal became an Earth Team volunteer in 1986 in Greenwood, Mississippi. Since that time she has contributed about 4,000 hours. Alice is a victim of myostitis ossifican. Her entire body is immobile except for her hands and her wrists. When the SCS staff has to be away from the office, they transfer their calls to Alice's home. By a special device on her telephone, she answers the phone, dials and takes messages as part of her volunteer service. Many compliments concerning her pleasing telephone personality and her desire to provide assistance have been received.

Residents of the Presque Isle Nursing Home in Maine served as Earth Team volunteers to assist the Aroostook SCS office assemble, fold, label and stamp about 2,000 newsletters issued quarterly by the Aroostook Resource Conservation and Development office. This unique group helped the Soil Conservation Service while satisfying their own need to do something useful and active. In less than a year they cheerfully volunteered more than 800 hours.

Court referred volunteers are persons referred to volunteer jobs by judges who feel it is more therapeutic for them to do volunteer services than to sit behind bars. A lawyer sentenced to community service, was instrumental in setting up several computer databases. A biology major at a local college performed his community service by transferring soils data to National Resource Inventory worksheets. Many court referred volunteers continue to volunteer for SCS after they have completed their sentences.

In Limestone County, Alabama, inmates from the local prison serve as Earth Team volunteers to assist SCS in laying out best management practices.

Many volunteer stories have happy endings. Paul Reich came to the Soil Survey Division, National Headquarters, as a student at the University of Maryland, Baltimore Campus. He liked the work so well that he continued volunteering after he had received his academic credit for interning. After graduation, SCS hired him on a temporary basis to maintain a global computer database on soil temperature and carbon and the use of a geographic information system in the watershed area of Java.

Ginny Cohn came to SCS after graduating from Stanford University with a masters degree in Land Resource Planning. She had researched a report at the SCS field office in Gilroy, CA, learning about the agency at that time. Upon coming to Washington, DC, she learned about the Earth Team and decided that volunteering would be an excellent way to gain experience while job hunting. She began her volunteer work with SCS working on farmland protection issues. Her superior work led to temporary employment. Ginny is on her way to her long-term goal to help communities in preventing and dealing with natural disaster.

Georges Aguehounde, a native of the Ivory Coast, had just graduated from Southeastern University with a Master's degree in Finance and Banking when he was left totally paralyzed by a hit and run driver. After spending one year in the hospital, he regained some movement in both arms. His rehabilitation specialist referred him to Job Match, an organization for people with disabilities. It was suggested that he become a part-time volunteer. Job Match referred Georges to SCS and he began coming into National Headquarters two or three days a week. He reviewed literature for the Senior Staff Analyst, saving many hours of reading which could be spent on more pressing priorities. With the staff's understanding and patience, Georges' skills increased and he gained strength and dexterity. He began to write faster and more legibly and to use the word processor, using a stylus. He learned to handle the telephone by himself, which was previously impossible. Today, Georges has a part-time job as a bookkeeper for a local business. He still keeps in touch with SCS.

Students from Galludet University, a school for hearing impaired, such as Lauren Blair, come to SCS to share their expertise in computer graphics while adapting to an office environment.

There has never been a better time for Earth Team volunteers. The energy, excitement, dedication and skills they bring to the job are vital to addressing our nation's environmental concerns. The Soil Conservation Service takes every opportunity to include Earth Team volunteers as part of their professional team. Special thanks and recognition is the most important reward we can give these volunteers—but the most important benefactor of their work is the environment. ■

Subj: SCS Earth Team Volunteer Program

The Earth Team Volunteer Program was established under the Department's statutory authorities as passed by Congress under the 1981 Farm Bill. Departmental Regulations 4230-1 of 1983 outline program operation (copies attached).

As far as I know, the SCS is the only USDA agency that has taken advantage of these authorities to establish a volunteer program. SCS has all the administrative/organizational activities and functions developed and could effectively expanded these as an umbrella for a USDA volunteer program or share them with other agencies.

SCS has a precedent for other agencies using the Earth Team umbrella for a volunteer program. The Environmental Protection Agency (EPA) does not have statutory authority for a volunteer program, except for student volunteers. As a result, SCS and EPA signed a Memo of Understanding which allows EPA the authority to use SCS Earth Team volunteers. A copy of the MOU is attached.

Under the definition that SCS uses, stipends may be paid to volunteers as long as it is from a non SCS source. Also under our authorities, SCS can reimburse volunteers for travel and incidental expenses.

I believe that the Earth Team could be an umbrella volunteer program for USDA under its present authorities and regulations. It could also be used throughout the federal government with minor statutory changes.

EXHIBIT - B

U.S. DEPARTMENT OF AGRICULTURE
WASHINGTON, D.C. 20250

| DEPARTMENTAL REGULATION | NUMBER: 4230-1 |
|---|---|
| SUBJECT: Volunteer Programs | DATE: July 15, 1983 |
| | OPI: Office of Personnel |

1 BACKGROUND AND PURPOSE

Section 1526 of the Food and Agriculture Act of 1981, 7 U.S.C. 2272, permits the Secretary of Agriculture to establish a program to use volunteers in carrying out programs of the Department. The purpose of this regulation is to establish guidelines for acceptance of volunteer service under this authority.

2 DEFINITION

Volunteer: Individual serving without compensation, performing duties to carry out the programs of USDA agencies, and in accordance with the requirements set forth in this directive.

3 POLICY

Agencies are authorized to recruit, train, and accept without regard to Civil Service classification laws, rules, or regulations, the services of individuals to serve without compensation. Volunteers may assist in any agency program, and may perform any activities except those which are inherently governmental in nature. See, e.g., OMB Circular A-76, March 29, 1979.

4 PROGRAM RESPONSIBILITY

Agencies should designate a coordinator who will be responsible for issuing agency guidelines, monitoring the program, and serving as agency contact. At the agency headquarters level, the coordinator should be a member of the personnel staff.

5 SPECIAL REQUIREMENTS

a Volunteers are not Federal employees for any purpose except for the purposes of Chapter 81, of Title 5, United States Code (relating to compensation and injury), and Sections 2671 through 2680 of Title 28, United States Code (relating to tort claims).

b Volunteer service must not be used to displace any USDA employee.

c Volunteers must be at least 16 years of age. Supervisors must adhere to appropriate Federal, State, and local laws and standards regarding employment of minors.

DISTRIBUTION: 42

d Requirements of Executive Order 10450, as amended, relating to security and 7 CFR 0.735-11 proscribing certain conduct must be met.

e Voluntary service must be documented as required by FPM Supplement 296-33, Subchapter 33. SF-50's are not to be sent to the National Finance Center.

6 RECOGNITION OF VOLUNTEER SERVICE

Upon completion of voluntary service, volunteers should be recognized by Letter or Certificate of Appreciation signed by the Agency Head.

7 PROGRAM EVALUATION

The Office of Personnel will conduct periodic reviews and evaluation of agency volunteer programs to assure that program requirements are being met and to determine program effectiveness. Agency headquarters offices are responsible for evaluating program activity throughout the Agency.

8 EQUAL OPPORTUNITY

Volunteer opportunities must be available to all interested persons, without regard to race, creed, age, color, sex, handicap, or any nonmerit factor.

SCS MOU A-3A75-2-60

# MEMORANDUM OF UNDERSTANDING BETWEEN THE

# U.S. DEPARTMENT OF AGRICULTURE SOIL CONSERVATION SERVICE

# AND THE

# U.S. ENVIRONMENTAL PROTECTION AGENCY

This Memorandum of Understanding (MOU) is made and entered into by and between the U.S. Department of Agriculture, Soil Conservation Service (SCS) and the U.S. Environmental Protection Agency (EPA).

## I. PURPOSE

The purpose of this MOU is to encourage and support volunteer activities to accomplish common objectives, interests, and statutory requirements of SCS and EPA.

## II. BACKGROUND

SCS and EPA have similar missions to conserve, protect, restore, and improve the Nation's natural resources. Both agencies share the common objective of improving the public awareness of the need to conserve and protect those resources. Both would mutually benefit from a joint endeavor.

SCS and EPA jointly endorse the goal of conservation and protection of the Nation's natural resources. To accomplish this goal, EPA will encourage its employees and others to become SCS Earth Team volunteers on activities relating to environmental education and conservation and protection. SCS will, under its statutory authority, manage the joint Earth Team volunteer program.

## III. RESPONSIBILITIES

A. SCS agrees to--

1. Provide oversight of the volunteer program to assure that activities reflect program objectives.

2. Provide supervision, direction, administration, and training as needed.

3. Encourage EPA employees and others to become Earth Team volunteers to accomplish mutual goals.

4. Direct SCS liaisons at EPA regional offices to coordinate volunteer activities with the SCS State volunteer coordinators as needed.

B. EPA agrees to--

1. Promote SCS's Earth Team volunteer program in a manner to enhance its credibility, importance, and goals.

2. Encourage EPA employees and others to participate in the Earth Team program.

3. Share technical training and/or information with volunteers to support mutual missions.

4. Reimburse SCS for expenses incurred by Earth Team volunteers in carrying out their EPA assignments in accordance with SCS guidelines.

C. It is mutually agreed that--

1. Agreements for volunteer coordination and support will be negotiated with each regional office.

2. Each volunteer will be properly signed up as either an individual or member of a group using SCS-PER-001 or 003 in order to be covered by Workers' Compensation and the Tort Claims Act.

3. Adequate office space, equipment, and supplies necessary for the volunteer activities that will be provided.

4. A joint recognition aware program for volunteers and volunteer supervisors for significant accomplishments will be developed.

5. Final decisions concerning the Earth Team program, its administration, and management rest with SCS.

## IV. PERIOD AND TERMS OF THIS MOU

A. Unless terminated under the terms of Section IV, D below, this MOU will remain in full force indefinitely.

B. This memorandum defines in general terms the basis on which the parties will cooperate and, does not constitute a financial obligation to serve as a basis for expenditures. No transfer of funds will be involved under this memorandum.

C. Any transfer of funds or other resources for the purposes of this MOU will be individually authorized by separate agreements against this memorandum, with each activity having a separate plan of work, responsibilities of each party, and a budget developed cooperatively.

D. SCS and EPA will annually review this MOU and amend, extend, or modify it by mutual consent of the authorizing officials. Either party may terminate this MOU by providing a 60-day written notice to the other party.

## V. PROVISIONS

A. Service under the Earth Team volunteer program must be without compensation from SCS and may not be used to displace any employee of the Department. Individuals providing voluntary service under this program are not Federal employees, except for the purpose of Chapter 81 of Title 5, United States Code (relating to Workers' Compensation), Sections 2671 through 2680 of Title 28, United States Code (relating to Tort Claims).

B. No member of, or delegate to Congress shall be admitted to any share or part of this agreement or to any benefits that may arise therefrom.

C. All activities under this agreement will be in compliance with the Drug Free Workplace Act of 1988 (Public Law 100-690, Title V, Subtitle D).

D. The program or activities conducted under this agreement or MOU will be in compliance with the nondiscrimination provisions contained in Titles VI and VII of the Civil Rights Act of 1964, as amended; the Civil Rights Restoration Act of 1987, (Public Law 100-259); and other nondiscrimination statutes: Section 504 of the Rehabilitation Act of 1973, Title IX of the Education Amendment of 1972, and the Age Discrimination Act of 1975. They will also be in accordance with regulations of the Secretary of Agriculture (7 CFR-15, Subparts A and B), which provide that no person in the United States shall on the grounds of race, color, national origin, age, sex, religion, marital status, or handicap be excluded from participation in, be denied

the benefits of, or be otherwise subjected to discrimination under any program or activity receiving Federal financial assistance from the Department of Agriculture or any agency thereof.

## VI. AUTHORITY

This MOU is entered into under the authority of Section 1526 of the Food and Agriculture Act of 1981 (Public Law 97-98); Departmental Regulation 4230-1, July 15, 1983.

# PROPOSAL FOR A NATIONAL VOLUNTEER SERVICE ORGANIZATION TO BE CALLED THE "EARTH TEAM"

## PRESENTED TO SECRETARY MIKE ESPY U.S. DEPARTMENT OF AGRICULTURE

## MARCH 15, 1993

Currently, the U.S. Department of Agriculture's Soil Conservation Service has a national volunteer organization known as the "Earth Team" in place in more than 3,000 SCS field offices nationwide.

Since President Clinton has indicated his desire to establish a national volunteer organization where citizens could help clean up the environment and perform other public service activities in return for college tuition assistance, the President may want to consider using the "Earth Team" as his vehicle to initiate his volunteer public service program.

Last year, SCS Earth Team volunteers donated over 400,000 hours of volunteer services assisting SCS in its mission of protecting our nation's soil and water. These services included helping SCS employees in field offices, assisting district conservationists with soil surveys in the field, and other tasks as required. The "Earth Team" concept could be expanded so that **any** citizen wishing to perform public service work could enter any U.S. government office, not just an SCS office, and be given an application to join the "Earth Team."

The "Earth Team" would not have to be tied to USDA or SCS per se; rather, if the President desires, the "Earth Team" logo and concept could be used as the name and symbol of his national volunteer service organization.

"Earth Team" is a catchy, environmentally-friendly phrase in tune with the youth of today and their activist spirit. It's only two words--but it's a powerful name that could act as the catalyst to attract more volunteers to President Clinton's nationwide organization.

For your consideration, I am enclosing a VHS tape featuring two videos. The first video is "Take Pride in America," another recent national public service campaign designed to promote volunteerism. The tape was produced by USDA. The second video explains the "Earth Team" concept. This video could be shown to President Clinton along with this proposal to better inform him of the national "Earth Team" idea. Also included are two brochures describing the "Earth Team" as it currently exists within SCS.

Thank you for your interest in this proposal. I look forward to hearing from you soon.

# The Civilian Conservation Corps: Demonstrating the value of soil conservation

*A public works program of the depression-ridden 1930s became a godsend to Hugh Bennett in his attempt to show how land might be farmed within its capabilities*

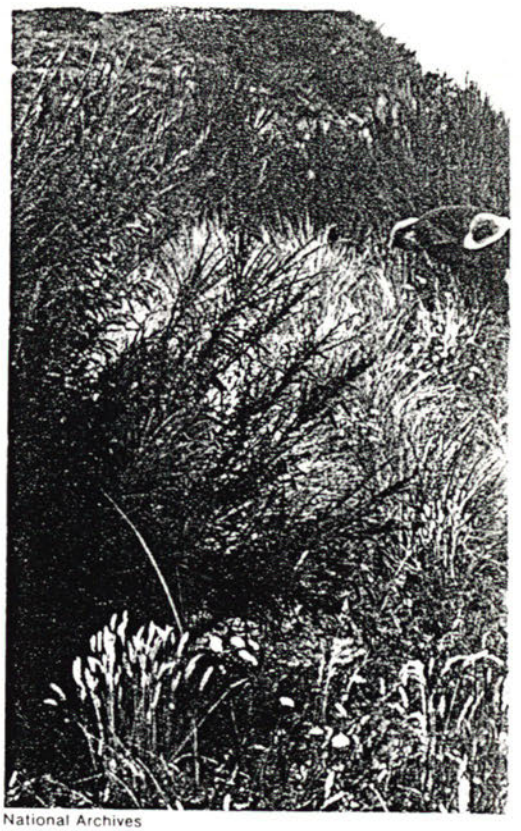

By Douglas Helms

National Archives

MOST conservationists are familiar with the contributions the Civilian Conservation Corps (CCC) made to forestry and recreational projects for the established conservation agencies of the 1930s, the Forest Service and National Park Service. But other agencies or their predecessors, such as the Fish and Wildlife Service, Bureau of Reclamation, Bureau of Land Management, and Soil Conservation Service (SCS), also made use of CCC labor. For example, CCC work enabled SCS to demonstrate the value of conservation activities. The federal role in soil and water conservation, therefore, did not end after the Great Depression and the termination of emergency employment programs.

Today, the CCC is the beneficiary of a positive public reputation that has obscured the history of problems that any large organization of individuals almost necessarily has. But that is not our story for now; it is the CCC's contribution to the cause of conservation.

## Putting young men to work

In 1932, one-fourth of America's men between the ages of 15 and 24 could not find work. Another 29 percent worked only part-time (*8*). Incoming president Franklin D. Roosevelt proposed on March 21, 1933, that Congress create "a civilian conservation corps to be used in simple work, not interfering with normal employment, and confining itself to forestry, the prevention of soil erosion, flood control and similar projects."

Congressional deliberations resulted in several alterations to Roosevelt's proposal, one of which held great significance for the future course of soil conservation. Major Robert Y. Stuart, chief of the Forest Service, asked that state and private land be made eligible as work areas. Otherwise, men from the East would have to be transported west of the Rocky Mountains, where 95 percent of the public domain lay (*8*). Stuart's argument was persuasive in part. The Act for the Relief of Unemployment allowed soil erosion control work on state and federal land, but restricted work on private land to activities already authorized under U.S. laws, such as controlling fire, disease, and pests in forests and "such work as is necessary in the public interest to control floods." The future of CCC work in soil conservation on private land henceforth depended on interpreting provisions of the act.

On the day Roosevelt signed the bill, Secretary of Agriculture Henry A. Wallace wired each governor to send a representative to Washington to discuss cooperation on forestry work. He also mentioned the flood control work and surmized that it "probably [included] control of soil erosion."

But soil conservation work was to be severely circumscribed. In April a U.S. Department of Agriculture (USDA) representative met with Roosevelt, who wanted CCC work on erosion and flood control directed to solving flooding problems over broad areas rather than benefiting an individual parcel of land. CCC Director Robert Fechner reiterated the president's reservations about work on private land to the governors in May.

Concern about the public's objections to expenditures of federal funds on private lands caused some of Roosevelt's reservations. He continued to warn Fechner about the criticism that too much work on private land would bring (*3, 4*). Also, Roosevelt, like many of his contemporaries, too often thought soil conservation required land use changes from cropland to woodland and was unfamiliar with the many conservation practices that could be installed on cropland with CCC labor. But he also had to heed the calls for a full share of CCC camps in those states where the acreage of public land was small. Thus, Roosevelt asked Fechner and Wallace to grant requests from midwestern states for

*Douglas Helms is historian, Soil Conservation Service, U.S. Department of Agriculture, Washington, D.C. 20013.*

ing the President's instructions because the "Act [CCC] is apparently a forestry Act."

## SCS assumes a greater role

If Roosevelt knew, and he probably did not, that soil erosion had been interpreted so broadly, he certainly did not reprimand anyone. The President appreciated an innovative mind, initiative, and a facility for bending the rules. Bennett received a compliment rather than a scolding. Years afterward, he told and retold the story of being summoned to the White House. Roosevelt explained how he, without detailed knowledge of the program, knew Bennett and his colleagues were doing a good job because established agricultural organizations wanted to absorb the new and as yet temporary agency. According to Roosevelt's political instincts, the desire for conquest was a measure of the quality of the prey.[1]

But Roosevelt did act to unify the programs by moving SES to USDA in March 1935. Bennett and his group's impressive showing were no small part in the President's decision to support and sign the Soil Conservation Act in April 1935. Later that month the newly renamed Soil Conservation Service took over more than 150 CCC camps previously under the general supervision of the Forest Service.

As the Depression continued, SCS assumed a greater role in supervising youth work through CCC. For example, in fiscal year 1937 an average of 70,000 enrollees occupied about 440 camps. Ninety percent of the camps worked not on the watershed-based demonstration projects but in a work area whose radius encompassed about 25,000 acres. As local communities began organizing soil conservation districts and signing cooperative agreements with USDA in 1937, SCS began supplying a CCC camp to further each district's conservation program (*11*). During the life of CCC, SCS supervised the work of more than 800 of the 4,500 camps. Black enrollees worked in more than 100 of those camps.

The expanded camp program brought CCC crews to new farming areas with a variety of conservation problems. Nonetheless, a majority of camps were located in the prairie states and eastward, especially the areas of row crop farming in hilly areas under humid conditions. The Reconnaissance Erosion Survey of 1934 provided additional guidance on where demonstrations were most needed. The map of CCC camps under the expanded program often coincided with maps of the areas of severe erosion.

In addition to the type work performed at Coon Valley in a dairying and general farming area, CCC crews also worked with orchardists in the Northeast. There, CCC labor was used as an inducement to get farmers to lay out orchards on the contour, build terraces and provide outlets for established orchards and, most importantly, plant cover crops (*9*).

## An agent of change

Generally, the CCC camps and demonstration projects served as agents for agricultural change. An SCS engineer reported from Columbus, Nebraska, that "the terracing prompted by the camp is the first that has been done in this county." Southern farmers had terraced land for a long time, but feared grassed outlets and waterways as sources of weeds. Thus, camp SCS-2, a black CCC camp at Collierville, Tennessee, received compliments for convincing tenants to accept Bermudagrass outlets and pastures. The project was judged to be the best example of such work in the state. Not one farmer in the Duck Creek Demonstration Project at Lindale, Texas, used Bermudagrass for soil conservation when the project began, but there were 2,138 acres of Bermudagrass a few years later (*14*). During an era when fertilizer was used sparingly, if at all, on pastures, the labor and supplies available through the CCC made possible a demonstration of the importance of pasture improvement.

As Hugh Benentt's plan to work with nature involved more vegetation, especially on highly erodible areas, there was a great need for planting materials. CCC crews worked at the nurseries established in conjunction with demonstration projects. Sometimes a CCC camp worked exclusively at a larger nursery. In 1936, after taking over the Bureau of Plant Industry's erosion nurseries, SCS had 48 major nurseries, which produced 130 million trees and seedlings for the CCC work areas and demonstration projects. CCC crews took to the pastures, range, and woods in the same year and collected 664,973 pounds of native grass seed and 1,647,064 pounds of conifer and hardwood seed for nursery stock (*10*).

Collecting grass seed was also part of the conservation program in semiarid areas, where regeneration of rangeland for grazing often involved CCC work in seeding and fencing for grazing distribution and contour furrowing, developing springs,

National Archives

National Archives

and building water spreaders and stock water dams for water conservation. Enrollees at Camp SCS-4 near Huron, South Dakota, for instance, spent most of their time in 1938 and 1939 building stockwater ponds. During the life of the SCS-supervised camps, enrollees built 134,167 miles of contour furrows to improve range and reduce erosion.

In areas of small, irrigated farms, work on leaky canals, overuse of water, and control of erosion on steep, irrigated slopes had to be incorporated into the program to attract cooperation. One strength of CCC and SCS leaders was their ability to recog-

[1]Bennett, Hugh H. "To the Rescue of Soil Conservation." Address to the National Association of Soil Conservation Districts, San Diego, California, February 2, 1955.

nize the need for new work and add it to the conservation program and concept.

Further west the mediterranean climate made the Pacific Coast a prime area for vineyards and orchards. As it did for orchards of the Northeast, SCS promoted contour planting and cover crops. Winter cover crops were particularly important on the Pacific Coast, where much of the rain falls during those months. On the Corralitos Creek Demonstration Project at Watsonville, California, enrollees worked on 29 miles of terraces and grade ditches and constructed 33 major outlet structures.

## A public land focus too

CCC work on farms and ranches provided the model for future SCS work with landowners. But CCC and SCS established some of their larger, coordinated projects on federal and state lands. The Rio Grande watershed above Elephant Butte Reservoir in New Mexico included both public and private lands. The reservoir, a Bureau of Reclamation project, had a capacity of 2.6 million acre-feet of water when completed in 1917. In the fall of 1935, SCS began deploying CCC camps to work on conservation measures to slow siltation of the reservoir. By 1937 silt had reduced the reservoir capacity 20 percent.

Enrollees from seven camps worked above the dam, while those from three camps below the dam concentrated on flood control for the towns. Within a year the 10 camps built 14 large impoundment dams and 49 smaller ones for stockwater and flood control, 6 miles of fence, and 900 miles of contour furrows. They dug 123,000 feet of ditches to divert water from gully heads. To further control gullies, they built 30,000 check dams, seeded or sodded 19.6 million square yards on banks, and planted 407,000 trees (*1*).

Some projects combined flood control for towns with water retention for agricultural uses. Camp SCS-4-N built a 2,400-foot, wire-bound rock diversion structure across Angel Canyon to protect El Rito, New Mexico, from flooding. The water was diverted along a 20,000-foot dike, where waterspreaders carried it to cultivated land and improved pasture.

Camp SCS-25 at Safford, Arizona, developed water spreaders for water infiltration on state lands in the Gila River Valley. Camp SCS-7 at Leeds, Utah, developed levees and dikes and built flood-control devices to protect irrigation systems.

Native American CCC enrollees worked under the auspices of the U.S. Department of the Interior's Indian Service, which carried out the functions of feeding, clothing, and transporting enrollees that the U.S. Army performed for other camps. SCS developed land management plans for several reservations, including the largest SCS work area, the Navajo Project. Along with other laborers, the Indian CCC workers installed numerous measures from the reservation's conservation plan (*5, 6*).

Enrollees at camp SCS-7, Warrenton, Oregon, participated in a project that became internationally known to experts on coastal sand dunes. A jetty built at the mouth of the Columbia River in the late 19th century resulted in scouring of the channel bottom. The sand drifted down the coast to be driven inland by strong winds onto the overgrazed sand dunes. This combination of events caused a wide sand flat, often covered by water at high tide. CCC enrollees logged and split fire-killed timber, donated by the county, to build a picket fence along the beach. They then planted European beachgrass on the dune that formed over the picket fence. The work restored the coastal area as a popular recreational site (*2, 7*).

Cooperative agreements with state highway departments allowed CCC enrollees to work on roadside erosion problems. Before the close of the CCC camps, 841 miles of roadside demonstration projects were completed (*12*).

To be sure, not all of the ideas for conservation originated with SCS. Local communities and states brought their problems to the attention of SCS and CCC officials. When the CCC program began, the Kansas Forestry, Fish, and Game Commission announced that it wanted to construct a series of lakes in state parks with CCC labor. The commission met objections that large structures were out of the purview of the CCC by agreeing to pay for materials and design work. The Forest Service supervised the work until SCS became part of USDA. The construction of each dam required the fulltime work of a CCC camp. The camps built at least seven lakes larger than 100 acres.

## CCC valuable to SCS

In retrospect, the material accomplishments of CCC activities, while important, seem less important than the educational experience for conservation. The work of the CCC crews was valuable to Bennett in proving the validity of his ideas about the benefits of concentrated conservation treatment of an entire watershed. The large-scale approach also permitted experimentation. Few of the conservationists' techniques were new, but the process of fitting them together was. The work led to the refinement and improvement of conservation measures still used today.

This experience, among both SCS staff and the enrollees, provided a trained, technical core of workers for SCS for years to come. Former enrollees joined the staff, and during the early years, CCC funds provided for nearly half of the agency's workforce.

In addition to contributing to the passage of the Soil Conservation Act of 1935, the CCC also was instrumental in helping the soil conservation district movement off to a healthy start. When the states began enacting soil conservation district laws in 1937, it came as no surprise to the SCS field force that the first districts were organized near CCC camp work areas.

CCC's real contribution, however, lay in proving the feasibility of conservation. The positive public attitude associated with CCC work, including soil conservation, helped to create an atmosphere in which soil conservation was regarded, at least in part, as a public responsibility.

**Soil Conservation Service**

# The Earth Team Volunteer Program

THE job of conserving America's renewable resources cannot be accomplished by government alone. The collective talents and energies of private individuals and groups are needed.

In recognition of the interest and skills many Americans have in conservation and the environment, Congress passed legislation–Section 1526 of PL 97-98, Food and Agriculture Act–in 1981 permitting agencies of USDA to use volunteers to accomplish their missions. The Soil Conservation Service utilized this authority to establish the Earth Team Volunteer Program.

Today, individual Earth Team volunteers work in concert with SCS and Conservation Districts across the country. They also work on special projects through cooperative agreements with other partners such as the Environmental Protection Agency, General Federation of Women's Clubs, Ruritan National, Izaak Walton League, National Council of Catholic Women, Soil and Water Society of America, and State Conservation Agencies.

The primary purpose of the Earth Team is to provide opportunities for people interested in conservation activities who want to work alongside professionals in their own communities. The use of volunteer resources also effectively expands services to our customers.

Earth Team volunteers bring special talents and enthusiasm that help SCS in its mission of natural resource conservation.

The 10,000 members of the Earth Team contributed 500,000 hours of service to SCS in 1,800 offices in 1992. In dollars, that effort represents a $5 million donation. Specifically, in our National Headquarters, 90 volunteers donated over 10,000 hours.

Earth Team volunteers have been a tremendous help with the effort to help farmers retain USDA program eligibility under the 1985 and 1990 Farm Bills. They fill in and provide support to the SCS workforce whenever and wherever needed. They do everything from assisting with design and layout of best management practices, to computer inputting and programming, providing public information and conservation education.

Here are some examples of our diverse Earth Team volunteer activities and how they are helping SCS and their conservation partners realize their vision:

Earth Team Volunteer Robert Carlon, a student at Virginia Tech University, spent his summer vacation working to help the Dinwiddie, VA SCS office tackle a heavy Farm Bill workload. By assisting with surveying, design and construction of grass waterways, critical area seeding, making highly erodible land determinations, and entering data in the computer, Robert enabled the SCS office to service more clients. Robert plans to return again next summer as a volunteer.

Dr. Dunstan Hayden is a professor of mathematics at Northern Virginia Community College. As an Earth Team volunteer, he is developing educational tools that can be utilized in environmental education learning areas.

April Wilhelm, who has an undergraduate degree in agronomy, a Master's degree in soils and is a certified elementary school teacher, is volunteering her time with SCS in Washington, DC to develop conservation education materials.

Charles Koch, a former state soil scientist, who retired from SCS over 20 years ago, is using his talents as an Earth Team volunteer to develop a computer database of all of the soils in Virginia's published soil survey reports.

Brian Engelbrecht was in a coma for three months when a blood vessel burst at the base of his brain. Following three brain surgeries and years of therapy, Brian, now 25 gets around in a wheelchair and devotes four days a week working for the Earth Team. Now able to stand with the aid of crutches, Brian performs a multitude of clerical duties, data entry and special projects in the SCS office in Columbia, MO. He was selected "Outstanding Volunteer of the Year in Missouri," chosen from a field of 1,100. Brian said, "I'm doing something rather than sitting home all day. I feel like I'm earning the disability income I receive from the government. In my own way, I'm giving something back."

High School students from West Platte High School in Weston, MO. volunteer to help plant trees in the SCS Plant Materials Center to restock the trees removed the previous year for use in windbreaks. Their teacher views the students' involvement as an extension of their classroom learning. "It's a real benefit to the students anytime you can add hands-on experience to what they've been reading about in books. They can see the benefits. The Earth Team program gives some of the students who aren't as strong academically

the chance to feel a sense of success through their volunteer work."

In Perry County, Alabama, local high school students volunteer to design best management practices. The agribusiness instructor teaches his students about ways to protect soil and water resources in the classroom. These students, as Earth Team volunteers, are provided an opportunity after school to assist landowners in design, layout and construction of conservation and water quality practices. A direct result of this exposure to conservation is that the students have developed a strong interest in agriculture. Several who would not have otherwise done so, have attended college to obtain a degree in some field of agriculture with the ultimate goal of working for the Soil Conservation Service.

Alice Teal became an Earth Team volunteer in 1986 in Greenwood, Mississippi. Since that time she has contributed about 4,000 hours. Alice is a victim of myostitis ossifican. Her entire body is immobile except for her hands and her wrists. When the SCS staff has to be away from the office, they transfer their calls to Alice's home. By a special device on her telephone, she answers the phone, dials and takes messages as part of her volunteer service. Many compliments concerning her pleasing telephone personality and her desire to provide assistance have been received.

Residents of the Presque Isle Nursing Home in Maine served as Earth Team volunteers to assist the Aroostook SCS office assemble, fold, label and stamp about 2,000 newsletters issued quarterly by the Aroostook Resource Conservation and Development office. This unique group helped the Soil Conservation Service while satisfying their own need to do something useful and active. In less than a year they cheerfully volunteered more than 800 hours.

Court referred volunteers are persons referred to volunteer jobs by judges who feel it is more therapeutic for them to do volunteer services than to sit behind bars. A lawyer sentenced to community service, was instrumental in setting up several computer databases. A biology major at a local college performed his community service by transferring soils data to National Resource Inventory worksheets. Many court referred volunteers continue to volunteer for SCS after they have completed their sentences.

In Limestone County, Alabama, inmates from the local prison serve as Earth Team volunteers to assist SCS in laying out best management practices.

Many volunteer stories have happy endings. Paul Reich came to the Soil Survey Division, National Headquarters, as a student at the University of Maryland, Baltimore Campus. He liked the work so well that he continued volunteering after he had received his academic credit for interning. After graduation, SCS hired him on a temporary basis to maintain a global computer database on soil temperature and carbon and the use of a geographic information system in the watershed area of Java.

Ginny Cohn came to SCS after graduating from Stanford University with a masters degree in Land Resource Planning. She had researched a report at the SCS field office in Gilroy, CA, learning about the agency at that time. Upon coming to Washington, DC, she learned about the Earth Team and decided that volunteering would be an excellent way to gain experience while job hunting. She began her volunteer work with SCS working on farmland protection issues. Her superior work led to temporary employment. Ginny is on her way to her long-term goal to help communities in preventing and dealing with natural disaster.

Georges Aguehounde, a native of the Ivory Coast, had just graduated from Southeastern University with a Master's degree in Finance and Banking when he was left totally paralyzed by a hit and run driver. After spending one year in the hospital, he regained some movement in both arms. His rehabilitation specialist referred him to Job Match, an organization for people with disabilities. It was suggested that he become a part-time volunteer. Job Match referred Georges to SCS and he began coming into National Headquarters two or three days a week. He reviewed literature for the Senior Staff Analyst, saving many hours of reading which could be spent on more pressing priorities. With the staff's understanding and patience, Georges' skills increased and he gained strength and dexterity. He began to write faster and more legibly and to use the word processor, using a stylus. He learned to handle the telephone by himself, which was previously impossible. Today, Georges has a part-time job as a bookkeeper for a local business. He still keeps in touch with SCS.

Students from Galludet University, a school for hearing impaired, such as Lauren Blair, come to SCS to share their expertise in computer graphics while adapting to an office environment.

There has never been a better time for Earth Team volunteers. The energy, excitement, dedication and skills they bring to the job are vital to addressing our nation's environmental concerns. The Soil Conservation Service takes every opportunity to include Earth Team volunteers as part of their professional team. Special thanks and recognition is the most important reward we can give these volunteers—but the most important benefactor of their work is the environment. ■

Subj: SCS Earth Team Volunteer Program

The Earth Team Volunteer Program was established under the Department's statutory authorities as passed by Congress under the 1981 Farm Bill. Departmental Regulations 4230-1 of 1983 outline program operation (copies attached).

As far as I know, the SCS is the only USDA agency that has taken advantage of these authorities to establish a volunteer program. SCS has all the administrative/organizational activities and functions developed and could effectively expanded these as an umbrella for a USDA volunteer program or share them with other agencies.

SCS has a precedent for other agencies using the Earth Team umbrella for a volunteer program. The Environmental Protection Agency (EPA) does not have statutory authority for a volunteer program, except for student volunteers. As a result, SCS and EPA signed a Memo of Understanding which allows EPA the authority to use SCS Earth Team volunteers. A copy of the MOU is attached.

Under the definition that SCS uses, stipends may be paid to volunteers as long as it is from a non SCS source. Also under our authorities, SCS can reimburse volunteers for travel and incidental expenses.

I believe that the Earth Team could be an umbrella volunteer program for USDA under its present authorities and regulations. It could also be used throughout the federal government with minor statutory changes.

U.S. DEPARTMENT OF AGRICULTURE
WASHINGTON, D.C. 20250

EXHIBIT B

| DEPARTMENTAL REGULATION | NUMBER: 4230-1 |
|---|---|
| SUBJECT: Volunteer Programs | DATE: July 15, 1983 |
| | OPI: Office of Personnel |

1 BACKGROUND AND PURPOSE

Section 1526 of the Food and Agriculture Act of 1981, 7 U.S.C. 2272, permits the Secretary of Agriculture to establish a program to use volunteers in carrying out programs of the Department. The purpose of this regulation is to establish guidelines for acceptance of volunteer service under this authority.

2 DEFINITION

Volunteer: Individual serving without compensation, performing duties to carry out the programs of USDA agencies, and in accordance with the requirements set forth in this directive.

3 POLICY

Agencies are authorized to recruit, train, and accept without regard to Civil Service classification laws, rules, or regulations, the services of individuals to serve without compensation. Volunteers may assist in any agency program, and may perform any activities except those which are inherently governmental in nature. See, e.g., OMB Circular A-76, March 29, 1979.

4 PROGRAM RESPONSIBILITY

Agencies should designate a coordinator who will be responsible for issuing agency guidelines, monitoring the program, and serving as agency contact. At the agency headquarters level, the coordinator should be a member of the personnel staff.

5 SPECIAL REQUIREMENTS

a Volunteers are not Federal employees for any purpose except for the purposes of Chapter 81, of Title 5, United States Code (relating to compensation and injury), and Sections 2671 through 2680 of Title 28, United States Code (relating to tort claims).

b Volunteer service must not be used to displace any USDA employee.

c Volunteers must be at least 16 years of age. Supervisors must adhere to appropriate Federal, State, and local laws and standards regarding employment of minors.

DISTRIBUTION: 42

d Requirements of Executive Order 10450, as amended, relating to security and 7 CFR 0.735-11 proscribing certain conduct must be met.

e Voluntary service must be documented as required by FPM Supplement 296-33, Subchapter 33. SF-50's are not to be sent to the National Finance Center.

6 RECOGNITION OF VOLUNTEER SERVICE

Upon completion of voluntary service, volunteers should be recognized by Letter or Certificate of Appreciation signed by the Agency Head.

7 PROGRAM EVALUATION

The Office of Personnel will conduct periodic reviews and evaluation of agency volunteer programs to assure that program requirements are being met and to determine program effectiveness. Agency headquarters offices are responsible for evaluating program activity throughout the Agency.

8 EQUAL OPPORTUNITY

Volunteer opportunities must be available to all interested persons, without regard to race, creed, age, color, sex, handicap, or any nonmerit factor.

SCS MOU A-3A75-2-60

# MEMORANDUM OF UNDERSTANDING BETWEEN THE

# U.S. DEPARTMENT OF AGRICULTURE SOIL CONSERVATION SERVICE

# AND THE

# U.S. ENVIRONMENTAL PROTECTION AGENCY

This Memorandum of Understanding (MOU) is made and entered into by and between the U.S. Department of Agriculture, Soil Conservation Service (SCS) and the U.S. Environmental Protection Agency (EPA).

## I. PURPOSE

The purpose of this MOU is to encourage and support volunteer activities to accomplish common objectives, interests, and statutory requirements of SCS and EPA.

## II. BACKGROUND

SCS and EPA have similar missions to conserve, protect, restore, and improve the Nation's natural resources. Both agencies share the common objective of improving the public awareness of the need to conserve and protect those resources. Both would mutually benefit from a joint endeavor.

SCS and EPA jointly endorse the goal of conservation and protection of the Nation's natural resources. To accomplish this goal, EPA will encourage its employees and others to become SCS Earth Team volunteers on activities relating to environmental education and conservation and protection. SCS will, under its statutory authority, manage the joint Earth Team volunteer program.

## III. RESPONSIBILITIES

A. SCS agrees to--

1. Provide oversight of the volunteer program to assure that activities reflect program objectives.

2. Provide supervision, direction, administration, and training as needed.

3. Encourage EPA employees and others to become Earth Team volunteers to accomplish mutual goals.

4. Direct SCS liaisons at EPA regional offices to coordinate volunteer activities with the SCS State volunteer coordinators as needed.

B. EPA agrees to--

1. Promote SCS's Earth Team volunteer program in a manner to enhance its credibility, importance, and goals.

2. Encourage EPA employees and others to participate in the Earth Team program.

3. Share technical training and/or information with volunteers to support mutual missions.

4. Reimburse SCS for expenses incurred by Earth Team volunteers in carrying out their EPA assignments in accordance with SCS guidelines.

C. It is mutually agreed that--

1. Agreements for volunteer coordination and support will be negotiated with each regional office.

2. Each volunteer will be properly signed up as either an individual or member of a group using SCS-PER-001 or 003 in order to be covered by Workers' Compensation and the Tort Claims Act.

3. Adequate office space, equipment, and supplies necessary for the volunteer activities that will be provided.

4. A joint recognition aware program for volunteers and volunteer supervisors for significant accomplishments will be developed.

5. Final decisions concerning the Earth Team program, its administration, and management rest with SCS.

## IV. PERIOD AND TERMS OF THIS MOU

A. Unless terminated under the terms of Section IV, D below, this MOU will remain in full force indefinitely.

B. This memorandum defines in general terms the basis on which the parties will cooperate and, does not constitute a financial obligation to serve as a basis for expenditures. No transfer of funds will be involved under this memorandum.

C. Any transfer of funds or other resources for the purposes of this MOU will be individually authorized by separate agreements against this memorandum, with each activity having a separate plan of work, responsibilities of each party, and a budget developed cooperatively.

D. SCS and EPA will annually review this MOU and amend, extend, or modify it by mutual consent of the authorizing officials. Either party may terminate this MOU by providing a 60-day written notice to the other party.

V. **PROVISIONS**

A. Service under the Earth Team volunteer program must be without compensation from SCS and may not be used to displace any employee of the Department. Individuals providing voluntary service under this program are not Federal employees, except for the purpose of Chapter 81 of Title 5, United States Code (relating to Workers' Compensation), Sections 2671 through 2680 of Title 28, United States Code (relating to Tort Claims).

B. No member of, or delegate to Congress shall be admitted to any share or part of this agreement or to any benefits that may arise therefrom.

C. All activities under this agreement will be in compliance with the Drug Free Workplace Act of 1988 (Public Law 100-690, Title V, Subtitle D).

D. The program or activities conducted under this agreement or MOU will be in compliance with the nondiscrimination provisions contained in Titles VI and VII of the Civil Rights Act of 1964, as amended; the Civil Rights Restoration Act of 1987, (Public Law 100-259); and other nondiscrimination statutes: Section 504 of the Rehabilitation Act of 1973, Title IX of the Education Amendment of 1972, and the Age Discrimination Act of 1975. They will also be in accordance with regulations of the Secretary of Agriculture (7 CFR-15, Subparts A and B), which provide that no person in the United States shall on the grounds of race, color, national origin, age, sex, religion, marital status, or handicap be excluded from participation in, be denied

the benefits of, or be otherwise subjected to discrimination under any program or activity receiving Federal financial assistance from the Department of Agriculture or any agency thereof.

## VI. AUTHORITY

This MOU is entered into under the authority of Section 1526 of the Food and Agriculture Act of 1981 (Public Law 97-98); Departmental Regulation 4230-1, July 15, 1983.

# PROPOSAL FOR A NATIONAL VOLUNTEER SERVICE ORGANIZATION TO BE CALLED THE "EARTH TEAM"

## PRESENTED TO SECRETARY MIKE ESPY U.S. DEPARTMENT OF AGRICULTURE

## MARCH 15, 1993

Currently, the U.S. Department of Agriculture's Soil Conservation Service has a national volunteer organization known as the "Earth Team" in place in more than 3,000 SCS field offices nationwide.

Since President Clinton has indicated his desire to establish a national volunteer organization where citizens could help clean up the environment and perform other public service activities in return for college tuition assistance, the President may want to consider using the "Earth Team" as his vehicle to initiate his volunteer public service program.

Last year, SCS Earth Team volunteers donated over 400,000 hours of volunteer services assisting SCS in its mission of protecting our nation's soil and water. These services included helping SCS employees in field offices, assisting district conservationists with soil surveys in the field, and other tasks as required. The "Earth Team" concept could be expanded so that **any** citizen wishing to perform public service work could enter any U.S. government office, not just an SCS office, and be given an application to join the "Earth Team."

The "Earth Team" would not have to be tied to USDA or SCS per se; rather, if the President desires, the "Earth Team" logo and concept could be used as the name and symbol of his national volunteer service organization.

"Earth Team" is a catchy, environmentally-friendly phrase in tune with the youth of today and their activist spirit. It's only two words--but it's a powerful name that could act as the catalyst to attract more volunteers to President Clinton's nationwide organization.

For your consideration, I am enclosing a VHS tape featuring two videos. The first video is "Take Pride in America," another recent national public service campaign designed to promote volunteerism. The tape was produced by USDA. The second video explains the "Earth Team" concept. This video could be shown to President Clinton along with this proposal to better inform him of the national "Earth Team" idea. Also included are two brochures describing the "Earth Team" as it currently exists within SCS.

Thank you for your interest in this proposal. I look forward to hearing from you soon.

# The Civilian Conservation Corps: Demonstrating the value of soil conservation

*A public works program of the depression-ridden 1930s became a godsend to Hugh Bennett in his attempt to show how land might be farmed within its capabilities*

By Douglas Helms

National Archives

MOST conservationists are familiar with the contributions the Civilian Conservation Corps (CCC) made to forestry and recreational projects for the established conservation agencies of the 1930s, the Forest Service and National Park Service. But other agencies or their predecessors, such as the Fish and Wildlife Service, Bureau of Reclamation, Bureau of Land Management, and Soil Conservation Service (SCS), also made use of CCC labor. For example, CCC work enabled SCS to demonstrate the value of conservation activities. The federal role in soil and water conservation, therefore, did not end after the Great Depression and the termination of emergency employment programs.

Today, the CCC is the beneficiary of a positive public reputation that has obscured the history of problems that any large organization of individuals almost necessarily has. But that is not our story for now; it is the CCC's contribution to the cause of conservation.

## Putting young men to work

In 1932, one-fourth of America's men between the ages of 15 and 24 could not find work. Another 29 percent worked only part-time (*8*). Incoming president Franklin D. Roosevelt proposed on March 21, 1933, that Congress create "a civilian conservation corps to be used in simple work, not interfering with normal employment, and confining itself to forestry, the prevention of soil erosion, flood control and similar projects."

Congressional deliberations resulted in several alterations to Roosevelt's proposal, one of which held great significance for the future course of soil conservation. Major Robert Y. Stuart, chief of the Forest Service, asked that state and private land be made eligible as work areas. Otherwise, men from the East would have to be transported west of the Rocky Mountains, where 95 percent of the public domain lay (*8*). Stuart's argument was persuasive in part. The Act for the Relief of Unemployment allowed soil erosion control work on state and federal land, but restricted work on private land to activities already authorized under U.S. laws, such as controlling fire, disease, and pests in forests and "such work as is necessary in the public interest to control floods." The future of CCC work in soil conservation on private land henceforth depended on interpreting provisions of the act.

On the day Roosevelt signed the bill, Secretary of Agriculture Henry A. Wallace wired each governor to send a representative to Washington to discuss cooperation on forestry work. He also mentioned the flood control work and surmized that it "probably [included] control of soil erosion."

But soil conservation work was to be severely circumscribed. In April a U.S. Department of Agriculture (USDA) representative met with Roosevelt, who wanted CCC work on erosion and flood control directed to solving flooding problems over broad areas rather than benefiting an individual parcel of land. CCC Director Robert Fechner reiterated the president's reservations about work on private land to the governors in May.

Concern about the public's objections to expenditures of federal funds on private lands caused some of Roosevelt's reservations. He continued to warn Fechner about the criticism that too much work on private land would bring (*3, 4*). Also, Roosevelt, like many of his contemporaries, too often thought soil conservation required land use changes from cropland to woodland and was unfamiliar with the many conservation practices that could be installed on cropland with CCC labor. But he also had to heed the calls for a full share of CCC camps in those states where the acreage of public land was small. Thus, Roosevelt asked Fechner and Wallace to grant requests from midwestern states for

*Douglas Helms is historian, Soil Conservation Service, U.S. Department of Agriculture, Washington, D.C. 20013.*

ing the President's instructions because the "Act [CCC] is apparently a forestry Act."

## SCS assumes a greater role

If Roosevelt knew, and he probably did not, that soil erosion had been interpreted so broadly, he certainly did not reprimand anyone. The President appreciated an innovative mind, initiative, and a facility for bending the rules. Bennett received a compliment rather than a scolding. Years afterward, he told and retold the story of being summoned to the White House. Roosevelt explained how he, without detailed knowledge of the program, knew Bennett and his colleagues were doing a good job because established agricultural organizations wanted to absorb the new and as yet temporary agency. According to Roosevelt's political instincts, the desire for conquest was a measure of the quality of the prey.[1]

But Roosevelt did act to unify the programs by moving SES to USDA in March 1935. Bennett and his group's impressive showing were no small part in the President's decision to support and sign the Soil Conservation Act in April 1935. Later that month the newly renamed Soil Conservation Service took over more than 150 CCC camps previously under the general supervision of the Forest Service.

As the Depression continued, SCS assumed a greater role in supervising youth work through CCC. For example, in fiscal year 1937 an average of 70,000 enrollees occupied about 440 camps. Ninety percent of the camps worked not on the watershed-based demonstration projects but in a work area whose radius encompassed about 25,000 acres. As local communities began organizing soil conservation districts and signing cooperative agreements with USDA in 1937, SCS began supplying a CCC camp to further each district's conservation program (*11*). During the life of CCC, SCS supervised the work of more than 800 of the 4,500 camps. Black enrollees worked in more than 100 of those camps.

The expanded camp program brought CCC crews to new farming areas with a variety of conservation problems. Nonetheless, a majority of camps were located in the prairie states and eastward, especially the areas of row crop farming in hilly areas under humid conditions. The Reconnaissance Erosion Survey of 1934 provided additional guidance on where demonstrations were most needed. The map of CCC camps under the expanded program often coincided with maps of the areas of severe erosion.

In addition to the type work performed at Coon Valley in a dairying and general farming area, CCC crews also worked with orchardists in the Northeast. There, CCC labor was used as an inducement to get farmers to lay out orchards on the contour, build terraces and provide outlets for established orchards and, most importantly, plant cover crops (*9*).

## An agent of change

Generally, the CCC camps and demonstration projects served as agents for agricultural change. An SCS engineer reported from Columbus, Nebraska, that "the terracing prompted by the camp is the first that has been done in this county." Southern farmers had terraced land for a long time, but feared grassed outlets and waterways as sources of weeds. Thus, camp SCS-2, a black CCC camp at Collierville, Tennessee, received compliments for convincing tenants to accept Bermudagrass outlets and pastures. The project was judged to be the best example of such work in the state. Not one farmer in the Duck Creek Demonstration Project at Lindale, Texas, used Bermudagrass for soil conservation when the project began, but there were 2,138 acres of Bermudagrass a few years later (*14*). During an era when fertilizer was used sparingly, if at all, on pastures, the labor and supplies available through the CCC made possible a demonstration of the importance of pasture improvement.

As Hugh Benentt's plan to work with nature involved more vegetation, especially on highly erodible areas, there was a great need for planting materials. CCC crews worked at the nurseries established in conjunction with demonstration projects. Sometimes a CCC camp worked exclusively at a larger nursery. In 1936, after taking over the Bureau of Plant Industry's erosion nurseries, SCS had 48 major nurseries, which produced 130 million trees and seedlings for the CCC work areas and demonstration projects. CCC crews took to the pastures, range, and woods in the same year and collected 664,973 pounds of native grass seed and 1,647,064 pounds of conifer and hardwood seed for nursery stock (*10*).

Collecting grass seed was also part of the conservation program in semiarid areas, where regeneration of rangeland for grazing often involved CCC work in seeding and fencing for grazing distribution and contour furrowing, developing springs,

and building water spreaders and stock water dams for water conservation. Enrollees at Camp SCS-4 near Huron, South Dakota, for instance, spent most of their time in 1938 and 1939 building stockwater ponds. During the life of the SCS-supervised camps, enrollees built 134,167 miles of contour furrows to improve range and reduce erosion.

In areas of small, irrigated farms, work on leaky canals, overuse of water, and control of erosion on steep, irrigated slopes had to be incorporated into the program to attract cooperation. One strength of CCC and SCS leaders was their ability to recog-

[1]Bennett, Hugh H. "To the Rescue of Soil Conservation." Address to the National Association of Soil Conservation Districts, San Diego, California, February 2, 1955.

nize the need for new work and add it to the conservation program and concept.

Further west the mediterranean climate made the Pacific Coast a prime area for vineyards and orchards. As it did for orchards of the Northeast, SCS promoted contour planting and cover crops. Winter cover crops were particularly important on the Pacific Coast, where much of the rain falls during those months. On the Corralitos Creek Demonstration Project at Watsonville, California, enrollees worked on 29 miles of terraces and grade ditches and constructed 33 major outlet structures.

## A public land focus too

CCC work on farms and ranches provided the model for future SCS work with landowners. But CCC and SCS established some of their larger, coordinated projects on federal and state lands. The Rio Grande watershed above Elephant Butte Reservoir in New Mexico included both public and private lands. The reservoir, a Bureau of Reclamation project, had a capacity of 2.6 million acre-feet of water when completed in 1917. In the fall of 1935, SCS began deploying CCC camps to work on conservation measures to slow siltation of the reservoir. By 1937 silt had reduced the reservoir capacity 20 percent.

Enrollees from seven camps worked above the dam, while those from three camps below the dam concentrated on flood control for the towns. Within a year the 10 camps built 14 large impoundment dams and 49 smaller ones for stockwater and flood control, 6 miles of fence, and 900 miles of contour furrows. They dug 123,000 feet of ditches to divert water from gully heads. To further control gullies, they built 30,000 check dams, seeded or sodded 19.6 million square yards on banks, and planted 407,000 trees (*1*).

Some projects combined flood control for towns with water retention for agricultural uses. Camp SCS-4-N built a 2,400-foot, wire-bound rock diversion structure across Angel Canyon to protect El Rito, New Mexico, from flooding. The water was diverted along a 20,000-foot dike, where waterspreaders carried it to cultivated land and improved pasture.

Camp SCS-25 at Safford, Arizona, developed water spreaders for water infiltration on state lands in the Gila River Valley. Camp SCS-7 at Leeds, Utah, developed levees and dikes and built flood-control devices to protect irrigation systems.

Native American CCC enrollees worked under the auspices of the U.S. Department of the Interior's Indian Service, which carried out the functions of feeding, clothing, and transporting enrollees that the U.S. Army performed for other camps. SCS developed land management plans for several reservations, including the largest SCS work area, the Navajo Project. Along with other laborers, the Indian CCC workers installed numerous measures from the reservation's conservation plan (*5, 6*).

Enrollees at camp SCS-7, Warrenton, Oregon, participated in a project that became internationally known to experts on coastal sand dunes. A jetty built at the mouth of the Columbia River in the late 19th century resulted in scouring of the channel bottom. The sand drifted down the coast to be driven inland by strong winds onto the overgrazed sand dunes. This combination of events caused a wide sand flat, often covered by water at high tide. CCC enrollees logged and split fire-killed timber, donated by the county, to build a picket fence along the beach. They then planted European beachgrass on the dune that formed over the picket fence. The work restored the coastal area as a popular recreational site (*2, 7*).

Cooperative agreements with state highway departments allowed CCC enrollees to work on roadside erosion problems. Before the close of the CCC camps, 841 miles of roadside demonstration projects were completed (*12*).

To be sure, not all of the ideas for conservation originated with SCS. Local communities and states brought their problems to the attention of SCS and CCC officials. When the CCC program began, the Kansas Forestry, Fish, and Game Commission announced that it wanted to construct a series of lakes in state parks with CCC labor. The commission met objections that large structures were out of the purview of the CCC by agreeing to pay for materials and design work. The Forest Service supervised the work until SCS became part of USDA. The construction of each dam required the fulltime work of a CCC camp. The camps built at least seven lakes larger than 100 acres.

## CCC valuable to SCS

In retrospect, the material accomplishments of CCC activities, while important, seem less important than the educational experience for conservation. The work of the CCC crews was valuable to Bennett in proving the validity of his ideas about the benefits of concentrated conservation treatment of an entire watershed. The large-scale approach also permitted experimentation. Few of the conservationists' techniques were new, but the process of fitting them together was. The work led to the refinement and improvement of conservation measures still used today.

This experience, among both SCS staff and the enrollees, provided a trained, technical core of workers for SCS for years to come. Former enrollees joined the staff, and during the early years, CCC funds provided for nearly half of the agency's workforce.

In addition to contributing to the passage of the Soil Conservation Act of 1935, the CCC also was instrumental in helping the soil conservation district movement off to a healthy start. When the states began enacting soil conservation district laws in 1937, it came as no surprise to the SCS field force that the first districts were organized near CCC camp work areas.

CCC's real contribution, however, lay in proving the feasibility of conservation. The positive public attitude associated with CCC work, including soil conservation, helped to create an atmosphere in which soil conservation was regarded, at least in part, as a public responsibility.

# The Earth Team Volunteer Program

THE job of conserving America's renewable resources cannot be accomplished by government alone. The collective talents and energies of private individuals and groups are needed.

In recognition of the interest and skills many Americans have in conservation and the environment, Congress passed legislation–Section 1526 of PL 97-98, Food and Agriculture Act–in 1981 permitting agencies of USDA to use volunteers to accomplish their missions. The Soil Conservation Service utilized this authority to establish the Earth Team Volunteer Program.

Today, individual Earth Team volunteers work in concert with SCS and Conservation Districts across the country. They also work on special projects through cooperative agreements with other partners such as the Environmental Protection Agency, General Federation of Women's Clubs, Ruritan National, Izaak Walton League, National Council of Catholic Women, Soil and Water Society of America, and State Conservation Agencies.

The primary purpose of the Earth Team is to provide opportunities for people interested in conservation activities who want to work alongside professionals in their own communities. The use of volunteer resources also effectively expands services to our customers.

Earth Team volunteers bring special talents and enthusiasm that help SCS in its mission of natural resource conservation.

The 10,000 members of the Earth Team contributed 500,000 hours of service to SCS in 1,800 offices in 1992. In dollars, that effort represents a $5 million donation. Specifically, in our National Headquarters, 90 volunteers donated over 10,000 hours.

Earth Team volunteers have been a tremendous help with the effort to help farmers retain USDA program eligibility under the 1985 and 1990 Farm Bills. They fill in and provide support to the SCS workforce whenever and wherever needed. They do everything from assisting with design and layout of best management practices, to computer inputting and programming, providing public information and conservation education.

Here are some examples of our diverse Earth Team volunteer activities and how they are helping SCS and their conservation partners realize their vision:

Earth Team Volunteer Robert Carlon, a student at Virginia Tech University, spent his summer vacation working to help the Dinwiddie, VA SCS office tackle a heavy Farm Bill workload. By assisting with surveying, design and construction of grass waterways, critical area seeding, making highly erodible land determinations, and entering data in the computer, Robert enabled the SCS office to service more clients. Robert plans to return again next summer as a volunteer.

Dr. Dunstan Hayden is a professor of mathematics at Northern Virginia Community College. As an Earth Team volunteer, he is developing educational tools that can be utilized in environmental education learning areas.

April Wilhelm, who has an undergraduate degree in agronomy, a Master's degree in soils and is a certified elementary school teacher, is volunteering her time with SCS in Washington, DC to develop conservation education materials.

Charles Koch, a former state soil scientist, who retired from SCS over 20 years ago, is using his talents as an Earth Team volunteer to develop a computer database of all of the soils in Virginia's published soil survey reports.

Brian Engelbrecht was in a coma for three months when a blood vessel burst at the base of his brain. Following three brain surgeries and years of therapy, Brian, now 25 gets around in a wheelchair and devotes four days a week working for the Earth Team. Now able to stand with the aid of crutches, Brian performs a multitude of clerical duties, data entry and special projects in the SCS office in Columbia, MO. He was selected "Outstanding Volunteer of the Year in Missouri," chosen from a field of 1,100. Brian said, "I'm doing something rather than sitting home all day. I feel like I'm earning the disability income I receive from the government. In my own way, I'm giving something back."

High School students from West Platte High School in Weston, MO. volunteer to help plant trees in the SCS Plant Materials Center to restock the trees removed the previous year for use in windbreaks. Their teacher views the students' involvement as an extension of their classroom learning. "It's a real benefit to the students anytime you can add hands-on experience to what they've been reading about in books. They can see the benefits. The Earth Team program gives some of the students who aren't as strong academically

the chance to feel a sense of success through their volunteer work."

In Perry County, Alabama, local high school students volunteer to design best management practices. The agribusiness instructor teaches his students about ways to protect soil and water resources in the classroom. These students, as Earth Team volunteers, are provided an opportunity after school to assist landowners in design, layout and construction of conservation and water quality practices. A direct result of this exposure to conservation is that the students have developed a strong interest in agriculture. Several who would not have otherwise done so, have attended college to obtain a degree in some field of agriculture with the ultimate goal of working for the Soil Conservation Service.

Alice Teal became an Earth Team volunteer in 1986 in Greenwood, Mississippi. Since that time she has contributed about 4,000 hours. Alice is a victim of myostitis ossifican. Her entire body is immobile except for her hands and her wrists. When the SCS staff has to be away from the office, they transfer their calls to Alice's home. By a special device on her telephone, she answers the phone, dials and takes messages as part of her volunteer service. Many compliments concerning her pleasing telephone personality and her desire to provide assistance have been received.

Residents of the Presque Isle Nursing Home in Maine served as Earth Team volunteers to assist the Aroostook SCS office assemble, fold, label and stamp about 2,000 newsletters issued quarterly by the Aroostook Resource Conservation and Development office. This unique group helped the Soil Conservation Service while satisfying their own need to do something useful and active. In less than a year they cheerfully volunteered more than 800 hours.

Court referred volunteers are persons referred to volunteer jobs by judges who feel it is more therapeutic for them to do volunteer services than to sit behind bars. A lawyer sentenced to community service, was instrumental in setting up several computer databases. A biology major at a local college performed his community service by transferring soils data to National Resource Inventory worksheets. Many court referred volunteers continue to volunteer for SCS after they have completed their sentences.

In Limestone County, Alabama, inmates from the local prison serve as Earth Team volunteers to assist SCS in laying out best management practices.

Many volunteer stories have happy endings. Paul Reich came to the Soil Survey Division, National Headquarters, as a student at the University of Maryland, Baltimore Campus. He liked the work so well that he continued volunteering after he had received his academic credit for interning. After graduation, SCS hired him on a temporary basis to maintain a global computer database on soil temperature and carbon and the use of a geographic information system in the watershed area of Java.

Ginny Cohn came to SCS after graduating from Stanford University with a masters degree in Land Resource Planning. She had researched a report at the SCS field office in Gilroy, CA, learning about the agency at that time. Upon coming to Washington, DC, she learned about the Earth Team and decided that volunteering would be an excellent way to gain experience while job hunting. She began her volunteer work with SCS working on farmland protection issues. Her superior work led to temporary employment. Ginny is on her way to her long-term goal to help communities in preventing and dealing with natural disaster.

Georges Aguehounde, a native of the Ivory Coast, had just graduated from Southeastern University with a Master's degree in Finance and Banking when he was left totally paralyzed by a hit and run driver. After spending one year in the hospital, he regained some movement in both arms. His rehabilitation specialist referred him to Job Match, an organization for people with disabilities. It was suggested that he become a part-time volunteer. Job Match referred Georges to SCS and he began coming into National Headquarters two or three days a week. He reviewed literature for the Senior Staff Analyst, saving many hours of reading which could be spent on more pressing priorities. With the staff's understanding and patience, Georges' skills increased and he gained strength and dexterity. He began to write faster and more legibly and to use the word processor, using a stylus. He learned to handle the telephone by himself, which was previously impossible. Today, Georges has a part-time job as a bookkeeper for a local business. He still keeps in touch with SCS.

Students from Galludet University, a school for hearing impaired, such as Lauren Blair, come to SCS to share their expertise in computer graphics while adapting to an office environment.

There has never been a better time for Earth Team volunteers. The energy, excitement, dedication and skills they bring to the job are vital to addressing our nation's environmental concerns. The Soil Conservation Service takes every opportunity to include Earth Team volunteers as part of their professional team. Special thanks and recognition is the most important reward we can give these volunteers—but the most important benefactor of their work is the environment. ■

Subj: SCS Earth Team Volunteer Program

The Earth Team Volunteer Program was established under the Department's statutory authorities as passed by Congress under the 1981 Farm Bill. Departmental Regulations 4230-1 of 1983 outline program operation (copies attached).

As far as I know, the SCS is the only USDA agency that has taken advantage of these authorities to establish a volunteer program. SCS has all the administrative/organizational activities and functions developed and could effectively expanded these as an umbrella for a USDA volunteer program or share them with other agencies.

SCS has a precedent for other agencies using the Earth Team umbrella for a volunteer program. The Environmental Protection Agency (EPA) does not have statutory authority for a volunteer program, except for student volunteers. As a result, SCS and EPA signed a Memo of Understanding which allows EPA the authority to use SCS Earth Team volunteers. A copy of the MOU is attached.

Under the definition that SCS uses, stipends may be paid to volunteers as long as it is from a non SCS source. Also under our authorities, SCS can reimburse volunteers for travel and incidental expenses.

I believe that the Earth Team could be an umbrella volunteer program for USDA under its present authorities and regulations. It could also be used throughout the federal government with minor statutory changes.

EXHIBIT B

U.S. DEPARTMENT OF AGRICULTURE
WASHINGTON, D.C. 20250

| DEPARTMENTAL REGULATION | NUMBER: 4230-1 |
|---|---|
| SUBJECT: Volunteer Programs | DATE: July 15, 1983 |
| | OPI: Office of Personnel |

1 BACKGROUND AND PURPOSE

Section 1526 of the Food and Agriculture Act of 1981, 7 U.S.C. 2272, permits the Secretary of Agriculture to establish a program to use volunteers in carrying out programs of the Department. The purpose of this regulation is to establish guidelines for acceptance of volunteer service under this authority.

2 DEFINITION

Volunteer: Individual serving without compensation, performing duties to carry out the programs of USDA agencies, and in accordance with the requirements set forth in this directive.

3 POLICY

Agencies are authorized to recruit, train, and accept without regard to Civil Service classification laws, rules, or regulations, the services of individuals to serve without compensation. Volunteers may assist in any agency program, and may perform any activities except those which are inherently governmental in nature. See, e.g., OMB Circular A-76, March 29, 1979.

4 PROGRAM RESPONSIBILITY

Agencies should designate a coordinator who will be responsible for issuing agency guidelines, monitoring the program, and serving as agency contact. At the agency headquarters level, the coordinator should be a member of the personnel staff.

5 SPECIAL REQUIREMENTS

a Volunteers are not Federal employees for any purpose except for the purposes of Chapter 81, of Title 5, United States Code (relating to compensation and injury), and Sections 2671 through 2680 of Title 28, United States Code (relating to tort claims).

b Volunteer service must not be used to displace any USDA employee.

c Volunteers must be at least 16 years of age. Supervisors must adhere to appropriate Federal, State, and local laws and standards regarding employment of minors.

DISTRIBUTION: 42

d Requirements of Executive Order 10450, as amended, relating to security and 7 CFR 0.735-11 proscribing certain conduct must be met.

e Voluntary service must be documented as required by FPM Supplement 296-33, Subchapter 33. SF-50's are not to be sent to the National Finance Center.

6 RECOGNITION OF VOLUNTEER SERVICE

Upon completion of voluntary service, volunteers should be recognized by Letter or Certificate of Appreciation signed by the Agency Head.

7 PROGRAM EVALUATION

The Office of Personnel will conduct periodic reviews and evaluation of agency volunteer programs to assure that program requirements are being met and to determine program effectiveness. Agency headquarters offices are responsible for evaluating program activity throughout the Agency.

8 EQUAL OPPORTUNITY

Volunteer opportunities must be available to all interested persons, without regard to race, creed, age, color, sex, handicap, or any nonmerit factor.

SCS MOU A-3A75-2-60

# MEMORANDUM OF UNDERSTANDING BETWEEN THE

# U.S. DEPARTMENT OF AGRICULTURE SOIL CONSERVATION SERVICE

# AND THE

# U.S. ENVIRONMENTAL PROTECTION AGENCY

This Memorandum of Understanding (MOU) is made and entered into by and between the U.S. Department of Agriculture, Soil Conservation Service (SCS) and the U.S. Environmental Protection Agency (EPA).

## I. PURPOSE

The purpose of this MOU is to encourage and support volunteer activities to accomplish common objectives, interests, and statutory requirements of SCS and EPA.

## II. BACKGROUND

SCS and EPA have similar missions to conserve, protect, restore, and improve the Nation's natural resources. Both agencies share the common objective of improving the public awareness of the need to conserve and protect those resources. Both would mutually benefit from a joint endeavor.

SCS and EPA jointly endorse the goal of conservation and protection of the Nation's natural resources. To accomplish this goal, EPA will encourage its employees and others to become SCS Earth Team volunteers on activities relating to environmental education and conservation and protection. SCS will, under its statutory authority, manage the joint Earth Team volunteer program.

## III. RESPONSIBILITIES

A. SCS agrees to--

1. Provide oversight of the volunteer program to assure that activities reflect program objectives.

2. Provide supervision, direction, administration, and training as needed.

3. Encourage EPA employees and others to become Earth Team volunteers to accomplish mutual goals.

4. Direct SCS liaisons at EPA regional offices to coordinate volunteer activities with the SCS State volunteer coordinators as needed.

B. EPA agrees to--

1. Promote SCS's Earth Team volunteer program in a manner to enhance its credibility, importance, and goals.

2. Encourage EPA employees and others to participate in the Earth Team program.

3. Share technical training and/or information with volunteers to support mutual missions.

4. Reimburse SCS for expenses incurred by Earth Team volunteers in carrying out their EPA assignments in accordance with SCS guidelines.

C. It is mutually agreed that--

1. Agreements for volunteer coordination and support will be negotiated with each regional office.

2. Each volunteer will be properly signed up as either an individual or member of a group using SCS-PER-001 or 003 in order to be covered by Workers' Compensation and the Tort Claims Act.

3. Adequate office space, equipment, and supplies necessary for the volunteer activities that will be provided.

4. A joint recognition aware program for volunteers and volunteer supervisors for significant accomplishments will be developed.

5. Final decisions concerning the Earth Team program, its administration, and management rest with SCS.

## IV. PERIOD AND TERMS OF THIS MOU

A. Unless terminated under the terms of Section IV, D below, this MOU will remain in full force indefinitely.

B. This memorandum defines in general terms the basis on which the parties will cooperate and, does not constitute a financial obligation to serve as a basis for expenditures. No transfer of funds will be involved under this memorandum.

C. Any transfer of funds or other resources for the purposes of this MOU will be individually authorized by separate agreements against this memorandum, with each activity having a separate plan of work, responsibilities of each party, and a budget developed cooperatively.

D. SCS and EPA will annually review this MOU and amend, extend, or modify it by mutual consent of the authorizing officials. Either party may terminate this MOU by providing a 60-day written notice to the other party.

## V. PROVISIONS

A. Service under the Earth Team volunteer program must be without compensation from SCS and may not be used to displace any employee of the Department. Individuals providing voluntary service under this program are not Federal employees, except for the purpose of Chapter 81 of Title 5, United States Code (relating to Workers' Compensation), Sections 2671 through 2680 of Title 28, United States Code (relating to Tort Claims).

B. No member of, or delegate to Congress shall be admitted to any share or part of this agreement or to any benefits that may arise therefrom.

C. All activities under this agreement will be in compliance with the Drug Free Workplace Act of 1988 (Public Law 100-690, Title V, Subtitle D).

D. The program or activities conducted under this agreement or MOU will be in compliance with the nondiscrimination provisions contained in Titles VI and VII of the Civil Rights Act of 1964, as amended; the Civil Rights Restoration Act of 1987, (Public Law 100-259); and other nondiscrimination statutes: Section 504 of the Rehabilitation Act of 1973, Title IX of the Education Amendment of 1972, and the Age Discrimination Act of 1975. They will also be in accordance with regulations of the Secretary of Agriculture (7 CFR-15, Subparts A and B), which provide that no person in the United States shall on the grounds of race, color, national origin, age, sex, religion, marital status, or handicap be excluded from participation in, be denied

the benefits of, or be otherwise subjected to discrimination under any program or activity receiving Federal financial assistance from the Department of Agriculture or any agency thereof.

## VI. AUTHORITY

This MOU is entered into under the authority of Section 1526 of the Food and Agriculture Act of 1981 (Public Law 97-98); Departmental Regulation 4230-1, July 15, 1983.

# PROPOSAL FOR A NATIONAL VOLUNTEER SERVICE ORGANIZATION TO BE CALLED THE "EARTH TEAM"

## PRESENTED TO SECRETARY MIKE ESPY U.S. DEPARTMENT OF AGRICULTURE

## MARCH 15, 1993

Currently, the U.S. Department of Agriculture's Soil Conservation Service has a national volunteer organization known as the "Earth Team" in place in more than 3,000 SCS field offices nationwide.

Since President Clinton has indicated his desire to establish a national volunteer organization where citizens could help clean up the environment and perform other public service activities in return for college tuition assistance, the President may want to consider using the "Earth Team" as his vehicle to initiate his volunteer public service program.

Last year, SCS Earth Team volunteers donated over 400,000 hours of volunteer services assisting SCS in its mission of protecting our nation's soil and water. These services included helping SCS employees in field offices, assisting district conservationists with soil surveys in the field, and other tasks as required. The "Earth Team" concept could be expanded so that **any** citizen wishing to perform public service work could enter any U.S. government office, not just an SCS office, and be given an application to join the "Earth Team."

The "Earth Team" would not have to be tied to USDA or SCS per se; rather, if the President desires, the "Earth Team" logo and concept could be used as the name and symbol of his national volunteer service organization.

"Earth Team" is a catchy, environmentally-friendly phrase in tune with the youth of today and their activist spirit. It's only two words--but it's a powerful name that could act as the catalyst to attract more volunteers to President Clinton's nationwide organization.

For your consideration, I am enclosing a VHS tape featuring two videos. The first video is "Take Pride in America," another recent national public service campaign designed to promote volunteerism. The tape was produced by USDA. The second video explains the "Earth Team" concept. This video could be shown to President Clinton along with this proposal to better inform him of the national "Earth Team" idea. Also included are two brochures describing the "Earth Team" as it currently exists within SCS.

Thank you for your interest in this proposal. I look forward to hearing from you soon.

# The Civilian Conservation Corps: Demonstrating the value of soil conservation

# The Civilian Conservation Corps: Demonstrating the value of soil conservation

*A public works program of the depression-ridden 1930s became a godsend to Hugh Bennett in his attempt to show how land might be farmed within its capabilities*

By Douglas Helms

National Archives

MOST conservationists are familiar with the contributions the Civilian Conservation Corps (CCC) made to forestry and recreational projects for the established conservation agencies of the 1930s, the Forest Service and National Park Service. But other agencies or their predecessors, such as the Fish and Wildlife Service, Bureau of Reclamation, Bureau of Land Management, and Soil Conservation Service (SCS), also made use of CCC labor. For example, CCC work enabled SCS to demonstrate the value of conservation activities. The federal role in soil and water conservation, therefore, did not end after the Great Depression and the termination of emergency employment programs.

Today, the CCC is the beneficiary of a positive public reputation that has obscured the history of problems that any large organization of individuals almost necessarily has. But that is not our story for now; it is the CCC's contribution to the cause of conservation.

## Putting young men to work

In 1932, one-fourth of America's men between the ages of 15 and 24 could not find work. Another 29 percent worked only part-time (*8*). Incoming president Franklin D. Roosevelt proposed on March 21, 1933, that Congress create "a civilian conservation corps to be used in simple work, not interfering with normal employment, and confining itself to forestry, the prevention of soil erosion, flood control and similar projects."

Congressional deliberations resulted in several alterations to Roosevelt's proposal, one of which held great significance for the future course of soil conservation. Major Robert Y. Stuart, chief of the Forest Service, asked that state and private land be made eligible as work areas. Otherwise, men from the East would have to be transported west of the Rocky Mountains, where 95 percent of the public domain lay (*8*). Stuart's argument was persuasive in part. The Act for the Relief of Unemployment allowed soil erosion control work on state and federal land, but restricted work on private land to activities already authorized under U.S. laws, such as controlling fire, disease, and pests in forests and "such work as is necessary in the public interest to control floods." The future of CCC work in soil conservation on private land henceforth depended on interpreting provisions of the act.

On the day Roosevelt signed the bill, Secretary of Agriculture Henry A. Wallace wired each governor to send a representative to Washington to discuss cooperation on forestry work. He also mentioned the flood control work and surmized that it "probably [included] control of soil erosion."

But soil conservation work was to be severely circumscribed. In April a U.S. Department of Agriculture (USDA) representative met with Roosevelt, who wanted CCC work on erosion and flood control directed to solving flooding problems over broad areas rather than benefiting an individual parcel of land. CCC Director Robert Fechner reiterated the president's reservations about work on private land to the governors in May.

Concern about the public's objections to expenditures of federal funds on private lands caused some of Roosevelt's reservations. He continued to warn Fechner about the criticism that too much work on private land would bring (*3, 4*). Also, Roosevelt, like many of his contemporaries, too often thought soil conservation required land use changes from cropland to woodland and was unfamiliar with the many conservation practices that could be installed on cropland with CCC labor. But he also had to heed the calls for a full share of CCC camps in those states where the acreage of public land was small. Thus, Roosevelt asked Fechner and Wallace to grant requests from midwestern states for

*Douglas Helms is historian, Soil Conservation Service, U.S. Department of Agriculture, Washington, D.C. 20013.*

ing the President's instructions because the "Act [CCC] is apparently a forestry Act."

## SCS assumes a greater role

If Roosevelt knew, and he probably did not, that soil erosion had been interpreted so broadly, he certainly did not reprimand anyone. The President appreciated an innovative mind, initiative, and a facility for bending the rules. Bennett received a compliment rather than a scolding. Years afterward, he told and retold the story of being summoned to the White House. Roosevelt explained how he, without detailed knowledge of the program, knew Bennett and his colleagues were doing a good job because established agricultural organizations wanted to absorb the new and as yet temporary agency. According to Roosevelt's political instincts, the desire for conquest was a measure of the quality of the prey.[1]

But Roosevelt did act to unify the programs by moving SES to USDA in March 1935. Bennett and his group's impressive showing were no small part in the President's decision to support and sign the Soil Conservation Act in April 1935. Later that month the newly renamed Soil Conservation Service took over more than 150 CCC camps previously under the general supervision of the Forest Service.

As the Depression continued, SCS assumed a greater role in supervising youth work through CCC. For example, in fiscal year 1937 an average of 70,000 enrollees occupied about 440 camps. Ninety percent of the camps worked not on the watershed-based demonstration projects but in a work area whose radius encompassed about 25,000 acres. As local communities began organizing soil conservation districts and signing cooperative agreements with USDA in 1937, SCS began supplying a CCC camp to further each district's conservation program (*11*). During the life of CCC, SCS supervised the work of more than 800 of the 4,500 camps. Black enrollees worked in more than 100 of those camps.

The expanded camp program brought CCC crews to new farming areas with a variety of conservation problems. Nonetheless, a majority of camps were located in the prairie states and eastward, especially the areas of row crop farming in hilly areas under humid conditions. The Reconnaissance Erosion Survey of 1934 provided additional guidance on where demonstrations were most needed. The map of CCC camps under the expanded program often coincided with maps of the areas of severe erosion.

In addition to the type work performed at Coon Valley in a dairying and general farming area, CCC crews also worked with orchardists in the Northeast. There, CCC labor was used as an inducement to get farmers to lay out orchards on the contour, build terraces and provide outlets for established orchards and, most importantly, plant cover crops (*9*).

## An agent of change

Generally, the CCC camps and demonstration projects served as agents for agricultural change. An SCS engineer reported from Columbus, Nebraska, that "the terracing prompted by the camp is the first that has been done in this county." Southern farmers had terraced land for a long time, but feared grassed outlets and waterways as sources of weeds. Thus, camp SCS-2, a black CCC camp at Collierville, Tennessee, received compliments for convincing tenants to accept Bermudagrass outlets and pastures. The project was judged to be the best example of such work in the state. Not one farmer in the Duck Creek Demonstration Project at Lindale, Texas, used Bermudagrass for soil conservation when the project began, but there were 2,138 acres of Bermudagrass a few years later (*14*). During an era when fertilizer was used sparingly, if at all, on pastures, the labor and supplies available through the CCC made possible a demonstration of the importance of pasture improvement.

As Hugh Benentt's plan to work with nature involved more vegetation, especially on highly erodible areas, there was a great need for planting materials. CCC crews worked at the nurseries established in conjunction with demonstration projects. Sometimes a CCC camp worked exclusively at a larger nursery. In 1936, after taking over the Bureau of Plant Industry's erosion nurseries, SCS had 48 major nurseries, which produced 130 million trees and seedlings for the CCC work areas and demonstration projects. CCC crews took to the pastures, range, and woods in the same year and collected 664,973 pounds of native grass seed and 1,647,064 pounds of conifer and hardwood seed for nursery stock (*10*).

Collecting grass seed was also part of the conservation program in semiarid areas, where regeneration of rangeland for grazing often involved CCC work in seeding and fencing for grazing distribution and contour furrowing, developing springs, and building water spreaders and stock water dams for water conservation. Enrollees at Camp SCS-4 near Huron, South Dakota, for instance, spent most of their time in 1938 and 1939 building stockwater ponds. During the life of the SCS-supervised camps, enrollees built 134,167 miles of contour furrows to improve range and reduce erosion.

In areas of small, irrigated farms, work on leaky canals, overuse of water, and control of erosion on steep, irrigated slopes had to be incorporated into the program to attract cooperation. One strength of CCC and SCS leaders was their ability to recog-

nize the need for new work and add it to the conservation program and concept.

Further west the mediterranean climate made the Pacific Coast a prime area for vineyards and orchards. As it did for orchards of the Northeast, SCS promoted contour planting and cover crops. Winter cover crops were particularly important on the Pacific Coast, where much of the rain falls during those months. On the Corralitos Creek Demonstration Project at Watsonville, California, enrollees worked on 29 miles of terraces and grade ditches and constructed 33 major outlet structures.

## A public land focus too

CCC work on farms and ranches provided the model for future SCS work with landowners. But CCC and SCS established some of their larger, coordinated projects on federal and state lands. The Rio Grande watershed above Elephant Butte Reservoir in New Mexico included both public and private lands. The reservoir, a Bureau of Reclamation project, had a capacity of 2.6 million acre-feet of water when completed in 1917. In the fall of 1935, SCS began deploying CCC camps to work on conservation measures to slow siltation of the reservoir. By 1937 silt had reduced the reservoir capacity 20 percent.

Enrollees from seven camps worked above the dam, while those from three camps below the dam concentrated on flood control for the towns. Within a year the 10 camps built 14 large impoundment dams and 49 smaller ones for stockwater and flood control, 6 miles of fence, and 900 miles of contour furrows. They dug 123,000 feet of ditches to divert water from gully heads. To further control gullies, they built 30,000 check dams, seeded or sodded 19.6 million square yards on banks, and planted 407,000 trees (*1*).

Some projects combined flood control for towns with water retention for agricultural uses. Camp SCS-4-N built a 2,400-foot, wire-bound rock diversion structure across Angel Canyon to protect El Rito, New Mexico, from flooding. The water was diverted along a 20,000-foot dike, where waterspreaders carried it to cultivated land and improved pasture.

Camp SCS-25 at Safford, Arizona, developed water spreaders for water infiltration on state lands in the Gila River Valley. Camp SCS-7 at Leeds, Utah, developed levees and dikes and built flood-control devices to protect irrigation systems.

Native American CCC enrollees worked under the auspices of the U.S. Department of the Interior's Indian Service, which carried out the functions of feeding, clothing, and transporting enrollees that the U.S. Army performed for other camps. SCS developed land management plans for several reservations, including the largest SCS work area, the Navajo Project. Along with other laborers, the Indian CCC workers installed numerous measures from the reservation's conservation plan (*5, 6*).

Enrollees at camp SCS-7, Warrenton, Oregon, participated in a project that became internationally known to experts on coastal sand dunes. A jetty built at the mouth of the Columbia River in the late 19th century resulted in scouring of the channel bottom. The sand drifted down the coast to be driven inland by strong winds onto the overgrazed sand dunes. This combination of events caused a wide sand flat, often covered by water at high tide. CCC enrollees logged and split fire-killed timber, donated by the county, to build a picket fence along the beach. They then planted European beachgrass on the dune that formed over the picket fence. The work restored the coastal area as a popular recreational site (*2, 7*).

Cooperative agreements with state highway departments allowed CCC enrollees to work on roadside erosion problems. Before the close of the CCC camps, 841 miles of roadside demonstration projects were completed (*12*).

To be sure, not all of the ideas for conservation originated with SCS. Local communities and states brought their problems to the attention of SCS and CCC officials. When the CCC program began, the Kansas Forestry, Fish, and Game Commission announced that it wanted to construct a series of lakes in state parks with CCC labor. The commission met objections that large structures were out of the purview of the CCC by agreeing to pay for materials and design work. The Forest Service supervised the work until SCS became part of USDA. The construction of each dam required the fulltime work of a CCC camp. The camps built at least seven lakes larger than 100 acres.

## CCC valuable to SCS

In retrospect, the material accomplishments of CCC activities, while important, seem less important than the educational experience for conservation. The work of the CCC crews was valuable to Bennett in proving the validity of his ideas about the benefits of concentrated conservation treatment of an entire watershed. The large-scale approach also permitted experimentation. Few of the conservationists' techniques were new, but the process of fitting them together was. The work led to the refinement and improvement of conservation measures still used today.

This experience, among both SCS staff and the enrollees, provided a trained, technical core of workers for SCS for years to come. Former enrollees joined the staff, and during the early years, CCC funds provided for nearly half of the agency's workforce.

In addition to contributing to the passage of the Soil Conservation Act of 1935, the CCC also was instrumental in helping the soil conservation district movement off to a healthy start. When the states began enacting soil conservation district laws in 1937, it came as no surprise to the SCS field force that the first districts were organized near CCC camp work areas.

CCC's real contribution, however, lay in proving the feasibility of conservation. The positive public attitude associated with CCC work, including soil conservation, helped to create an atmosphere in which soil conservation was regarded, at least in part, as a public responsibility.

* Use the best unit of measuring your work.

Please note: This is the first attempt to quantify the work NRCS accomplished through the AmeriCorps program. Your information will be entered into a data base that we can sort and cross reference by projects, geographic locations, activities, etc. After reviewing our results and your comments, we will revise our approach.

40 - Waste Utilization
41 - Tourism
42 - Human Resources
43 - Weed Control
44 - Financial Resources
45 - Business & Industry
46 - Land Use
47 - Regional Planning
48 - Grants Program Manager

(National RC&D Directory, January 1995)

## ABOUT THIS DIRECTORY

This document represents the names and addresses of key people involved in the Resource Conservation and Development (RC&D) program. It is compiled by the National RC&D Staff based on information provided by program managers, coordinators, and others. Since many councils have different committees which are combinations of the more common ones listed below, that chairperson is listed twice. For example, the chairperson for a recreation and tourism committee will be listed under 29 and 41 for convenience. Corrections and/or changes should be sent to the National RC&D Office and periodic updates of the directory will be issued.

## KEY TO LISTINGS

### REGIONS

ro - Regional Officer
na - National Agency & Consultants personnel
no - National Association of RC&D Councils Board of Directors
ne - New England Association of RC&D Areas
ma - Midatlantic RC&D Association
se - Southeastern Association of RC&D Councils
sw - Southwestern RC&D Association
nc - North Central Association of RC&D Areas
we - Western RC&D Association, Incorporated
co - Consultant

# SOIL CONSERVATION SERVICE INITIATIVES

United States Department of Agriculture

**Soil Conservation Service**

# The Earth Team Volunteer Program

THE job of conserving America's renewable resources cannot be accomplished by government alone. The collective talents and energies of private individuals and groups are needed.

In recognition of the interest and skills many Americans have in conservation and the environment, Congress passed legislation–Section 1526 of PL 97-98, Food and Agriculture Act–in 1981 permitting agencies of USDA to use volunteers to accomplish their missions. The Soil Conservation Service utilized this authority to establish the Earth Team Volunteer Program.

Today, individual Earth Team volunteers work in concert with SCS and Conservation Districts across the country. They also work on special projects through cooperative agreements with other partners such as the Environmental Protection Agency, General Federation of Women's Clubs, Ruritan National, Izaak Walton League, National Council of Catholic Women, Soil and Water Society of America, and State Conservation Agencies.

The primary purpose of the Earth Team is to provide opportunities for people interested in conservation activities who want to work alongside professionals in their own communities. The use of volunteer resources also effectively expands services to our customers.

Earth Team volunteers bring special talents and enthusiasm that help SCS in its mission of natural resource conservation.

The 10,000 members of the Earth Team contributed 500,000 hours of service to SCS in 1,800 offices in 1992. In dollars, that effort represents a $5 million donation. Specifically, in our National Headquarters, 90 volunteers donated over 10,000 hours.

Earth Team volunteers have been a tremendous help with the effort to help farmers retain USDA program eligibility under the 1985 and 1990 Farm Bills. They fill in and provide support to the SCS workforce whenever and wherever needed. They do everything from assisting with design and layout of best management practices, to computer inputting and programming, providing public information and conservation education.

Here are some examples of our diverse Earth Team volunteer activities and how they are helping SCS and their conservation partners realize their vision:

Earth Team Volunteer Robert Carlon, a student at Virginia Tech University, spent his summer vacation working to help the Dinwiddie, VA SCS office tackle a heavy Farm Bill workload. By assisting with surveying, design and construction of grass waterways, critical area seeding, making highly erodible land determinations, and entering data in the computer, Robert enabled the SCS office to service more clients. Robert plans to return again next summer as a volunteer.

Dr. Dunstan Hayden is a professor of mathematics at Northern Virginia Community College. As an Earth Team volunteer, he is developing educational tools that can be utilized in environmental education learning areas.

April Wilhelm, who has an undergraduate degree in agronomy, a Master's degree in soils and is a certified elementary school teacher, is volunteering her time with SCS in Washington, DC to develop conservation education materials.

Charles Koch, a former state soil scientist, who retired from SCS over 20 years ago, is using his talents as an Earth Team volunteer to develop a computer database of all of the soils in Virginia's published soil survey reports.

Brian Engelbrecht was in a coma for three months when a blood vessel burst at the base of his brain. Following three brain surgeries and years of therapy, Brian, now 25 gets around in a wheelchair and devotes four days a week working for the Earth Team. Now able to stand with the aid of crutches, Brian performs a multitude of clerical duties, data entry and special projects in the SCS office in Columbia, MO. He was selected "Outstanding Volunteer of the Year in Missouri," chosen from a field of 1,100. Brian said, "I'm doing something rather than sitting home all day. I feel like I'm earning the disability income I receive from the government. In my own way, I'm giving something back."

High School students from West Platte High School in Weston, MO. volunteer to help plant trees in the SCS Plant Materials Center to restock the trees removed the previous year for use in windbreaks. Their teacher views the students' involvement as an extension of their classroom learning. "It's a real benefit to the students anytime you can add hands-on experience to what they've been reading about in books. They can see the benefits. The Earth Team program gives some of the students who aren't as strong academically

the chance to feel a sense of success through their volunteer work."

In Perry County, Alabama, local high school students volunteer to design best management practices. The agribusiness instructor teaches his students about ways to protect soil and water resources in the classroom. These students, as Earth Team volunteers, are provided an opportunity after school to assist landowners in design, layout and construction of conservation and water quality practices. A direct result of this exposure to conservation is that the students have developed a strong interest in agriculture. Several who would not have otherwise done so, have attended college to obtain a degree in some field of agriculture with the ultimate goal of working for the Soil Conservation Service.

Alice Teal became an Earth Team volunteer in 1986 in Greenwood, Mississippi. Since that time she has contributed about 4,000 hours. Alice is a victim of myostitis ossifican. Her entire body is immobile except for her hands and her wrists. When the SCS staff has to be away from the office, they transfer their calls to Alice's home. By a special device on her telephone, she answers the phone, dials and takes messages as part of her volunteer service. Many compliments concerning her pleasing telephone personality and her desire to provide assistance have been received.

Residents of the Presque Isle Nursing Home in Maine served as Earth Team volunteers to assist the Aroostook SCS office assemble, fold, label and stamp about 2,000 newsletters issued quarterly by the Aroostook Resource Conservation and Development office. This unique group helped the Soil Conservation Service while satisfying their own need to do something useful and active. In less than a year they cheerfully volunteered more than 800 hours.

Court referred volunteers are persons referred to volunteer jobs by judges who feel it is more therapeutic for them to do volunteer services than to sit behind bars. A lawyer sentenced to community service, was instrumental in setting up several computer databases. A biology major at a local college performed his community service by transferring soils data to National Resource Inventory worksheets. Many court referred volunteers continue to volunteer for SCS after they have completed their sentences.

In Limestone County, Alabama, inmates from the local prison serve as Earth Team volunteers to assist SCS in laying out best management practices.

Many volunteer stories have happy endings. Paul Reich came to the Soil Survey Division, National Headquarters, as a student at the University of Maryland, Baltimore Campus. He liked the work so well that he continued volunteering after he had received his academic credit for interning. After graduation, SCS hired him on a temporary basis to maintain a global computer database on soil temperature and carbon and the use of a geographic information system in the watershed area of Java.

Ginny Cohn came to SCS after graduating from Stanford University with a masters degree in Land Resource Planning. She had researched a report at the SCS field office in Gilroy, CA, learning about the agency at that time. Upon coming to Washington, DC, she learned about the Earth Team and decided that volunteering would be an excellent way to gain experience while job hunting. She began her volunteer work with SCS working on farmland protection issues. Her superior work led to temporary employment. Ginny is on her way to her long-term goal to help communities in preventing and dealing with natural disaster.

Georges Aguehounde, a native of the Ivory Coast, had just graduated from Southeastern University with a Master's degree in Finance and Banking when he was left totally paralyzed by a hit and run driver. After spending one year in the hospital, he regained some movement in both arms. His rehabilitation specialist referred him to Job Match, an organization for people with disabilities. It was suggested that he become a part-time volunteer. Job Match referred Georges to SCS and he began coming into National Headquarters two or three days a week. He reviewed literature for the Senior Staff Analyst, saving many hours of reading which could be spent on more pressing priorities. With the staff's understanding and patience, Georges' skills increased and he gained strength and dexterity. He began to write faster and more legibly and to use the word processor, using a stylus. He learned to handle the telephone by himself, which was previously impossible. Today, Georges has a part-time job as a bookkeeper for a local business. He still keeps in touch with SCS.

Students from Galludet University, a school for hearing impaired, such as Lauren Blair, come to SCS to share their expertise in computer graphics while adapting to an office environment.

There has never been a better time for Earth Team volunteers. The energy, excitement, dedication and skills they bring to the job are vital to addressing our nation's environmental concerns. The Soil Conservation Service takes every opportunity to include Earth Team volunteers as part of their professional team. Special thanks and recognition is the most important reward we can give these volunteers—but the most important benefactor of their work is the environment. ■

Subj: SCS Earth Team Volunteer Program

The Earth Team Volunteer Program was established under the Department's statutory authorities as passed by Congress under the 1981 Farm Bill. Departmental Regulations 4230-1 of 1983 outline program operation (copies attached).

As far as I know, the SCS is the only USDA agency that has taken advantage of these authorities to establish a volunteer program. SCS has all the administrative/organizational activities and functions developed and could effectively expanded these as an umbrella for a USDA volunteer program or share them with other agencies.

SCS has a precedent for other agencies using the Earth Team umbrella for a volunteer program. The Environmental Protection Agency (EPA) does not have statutory authority for a volunteer program, except for student volunteers. As a result, SCS and EPA signed a Memo of Understanding which allows EPA the authority to use SCS Earth Team volunteers. A copy of the MOU is attached.

Under the definition that SCS uses, stipends may be paid to volunteers as long as it is from a non SCS source. Also under our authorities, SCS can reimburse volunteers for travel and incidental expenses.

I believe that the Earth Team could be an umbrella volunteer program for USDA under its present authorities and regulations. It could also be used throughout the federal government with minor statutory changes.

EXHIBIT - B

U.S. DEPARTMENT OF AGRICULTURE
WASHINGTON, D.C. 20250

| DEPARTMENTAL REGULATION | NUMBER: 4230-1 |
|---|---|
| SUBJECT: Volunteer Programs | DATE: July 15, 1983 |
| | OPI: Office of Personnel |

1 BACKGROUND AND PURPOSE

Section 1526 of the Food and Agriculture Act of 1981, 7 U.S.C. 2272, permits the Secretary of Agriculture to establish a program to use volunteers in carrying out programs of the Department. The purpose of this regulation is to establish guidelines for acceptance of volunteer service under this authority.

2 DEFINITION

Volunteer: Individual serving without compensation, performing duties to carry out the programs of USDA agencies, and in accordance with the requirements set forth in this directive.

3 POLICY

Agencies are authorized to recruit, train, and accept without regard to Civil Service classification laws, rules, or regulations, the services of individuals to serve without compensation. Volunteers may assist in any agency program, and may perform any activities except those which are inherently governmental in nature. See, e.g., OMB Circular A-76, March 29, 1979.

4 PROGRAM RESPONSIBILITY

Agencies should designate a coordinator who will be responsible for issuing agency guidelines, monitoring the program, and serving as agency contact. At the agency headquarters level, the coordinator should be a member of the personnel staff.

5 SPECIAL REQUIREMENTS

a Volunteers are not Federal employees for any purpose except for the purposes of Chapter 81, of Title 5, United States Code (relating to compensation and injury), and Sections 2671 through 2680 of Title 28, United States Code (relating to tort claims).

b Volunteer service must not be used to displace any USDA employee.

c Volunteers must be at least 16 years of age. Supervisors must adhere to appropriate Federal, State, and local laws and standards regarding employment of minors.

DISTRIBUTION: 42

d Requirements of Executive Order 10450, as amended, relating to security and 7 CFR 0.735-11 proscribing certain conduct must be met.

e Voluntary service must be documented as required by FPM Supplement 296-33, Subchapter 33. SF-50's are not to be sent to the National Finance Center.

6 RECOGNITION OF VOLUNTEER SERVICE

Upon completion of voluntary service, volunteers should be recognized by Letter or Certificate of Appreciation signed by the Agency Head.

7 PROGRAM EVALUATION

The Office of Personnel will conduct periodic reviews and evaluation of agency volunteer programs to assure that program requirements are being met and to determine program effectiveness. Agency headquarters offices are responsible for evaluating program activity throughout the Agency.

8 EQUAL OPPORTUNITY

Volunteer opportunities must be available to all interested persons, without regard to race, creed, age, color, sex, handicap, or any nonmerit factor.

SCS MOU A-3A75-2-60

# MEMORANDUM OF UNDERSTANDING BETWEEN THE

# U.S. DEPARTMENT OF AGRICULTURE SOIL CONSERVATION SERVICE

# AND THE

# U.S. ENVIRONMENTAL PROTECTION AGENCY

This Memorandum of Understanding (MOU) is made and entered into by and between the U.S. Department of Agriculture, Soil Conservation Service (SCS) and the U.S. Environmental Protection Agency (EPA).

## I. PURPOSE

The purpose of this MOU is to encourage and support volunteer activities to accomplish common objectives, interests, and statutory requirements of SCS and EPA.

## II. BACKGROUND

SCS and EPA have similar missions to conserve, protect, restore, and improve the Nation's natural resources. Both agencies share the common objective of improving the public awareness of the need to conserve and protect those resources. Both would mutually benefit from a joint endeavor.

SCS and EPA jointly endorse the goal of conservation and protection of the Nation's natural resources. To accomplish this goal, EPA will encourage its employees and others to become SCS Earth Team volunteers on activities relating to environmental education and conservation and protection. SCS will, under its statutory authority, manage the joint Earth Team volunteer program.

## III. RESPONSIBILITIES

A. SCS agrees to--

1. Provide oversight of the volunteer program to assure that activities reflect program objectives.

2. Provide supervision, direction, administration, and training as needed.

3. Encourage EPA employees and others to become Earth Team volunteers to accomplish mutual goals.

4. Direct SCS liaisons at EPA regional offices to coordinate volunteer activities with the SCS State volunteer coordinators as needed.

B. EPA agrees to--

1. Promote SCS's Earth Team volunteer program in a manner to enhance its credibility, importance, and goals.

2. Encourage EPA employees and others to participate in the Earth Team program.

3. Share technical training and/or information with volunteers to support mutual missions.

4. Reimburse SCS for expenses incurred by Earth Team volunteers in carrying out their EPA assignments in accordance with SCS guidelines.

C. It is mutually agreed that--

1. Agreements for volunteer coordination and support will be negotiated with each regional office.

2. Each volunteer will be properly signed up as either an individual or member of a group using SCS-PER-001 or 003 in order to be covered by Workers' Compensation and the Tort Claims Act.

3. Adequate office space, equipment, and supplies necessary for the volunteer activities that will be provided.

4. A joint recognition aware program for volunteers and volunteer supervisors for significant accomplishments will be developed.

5. Final decisions concerning the Earth Team program, its administration, and management rest with SCS.

## IV. PERIOD AND TERMS OF THIS MOU

A. Unless terminated under the terms of Section IV, D below, this MOU will remain in full force indefinitely.

B. This memorandum defines in general terms the basis on which the parties will cooperate and, does not constitute a financial obligation to serve as a basis for expenditures. No transfer of funds will be involved under this memorandum.

C. Any transfer of funds or other resources for the purposes of this MOU will be individually authorized by separate agreements against this memorandum, with each activity having a separate plan of work, responsibilities of each party, and a budget developed cooperatively.

D. SCS and EPA will annually review this MOU and amend, extend, or modify it by mutual consent of the authorizing officials. Either party may terminate this MOU by providing a 60-day written notice to the other party.

## V. PROVISIONS

A. Service under the Earth Team volunteer program must be without compensation from SCS and may not be used to displace any employee of the Department. Individuals providing voluntary service under this program are not Federal employees, except for the purpose of Chapter 81 of Title 5, United States Code (relating to Workers' Compensation), Sections 2671 through 2680 of Title 28, United States Code (relating to Tort Claims).

B. No member of, or delegate to Congress shall be admitted to any share or part of this agreement or to any benefits that may arise therefrom.

C. All activities under this agreement will be in compliance with the Drug Free Workplace Act of 1988 (Public Law 100-690, Title V, Subtitle D).

D. The program or activities conducted under this agreement or MOU will be in compliance with the nondiscrimination provisions contained in Titles VI and VII of the Civil Rights Act of 1964, as amended; the Civil Rights Restoration Act of 1987, (Public Law 100-259); and other nondiscrimination statutes: Section 504 of the Rehabilitation Act of 1973, Title IX of the Education Amendment of 1972, and the Age Discrimination Act of 1975. They will also be in accordance with regulations of the Secretary of Agriculture (7 CFR-15, Subparts A and B), which provide that no person in the United States shall on the grounds of race, color, national origin, age, sex, religion, marital status, or handicap be excluded from participation in, be denied

the benefits of, or be otherwise subjected to discrimination under any program or activity receiving Federal financial assistance from the Department of Agriculture or any agency thereof.

## VI. AUTHORITY

This MOU is entered into under the authority of Section 1526 of the Food and Agriculture Act of 1981 (Public Law 97-98); Departmental Regulation 4230-1, July 15, 1983.

# PROPOSAL FOR A NATIONAL VOLUNTEER SERVICE ORGANIZATION TO BE CALLED THE "EARTH TEAM"

## PRESENTED TO SECRETARY MIKE ESPY U.S. DEPARTMENT OF AGRICULTURE

## MARCH 15, 1993

Currently, the U.S. Department of Agriculture's Soil Conservation Service has a national volunteer organization known as the "Earth Team" in place in more than 3,000 SCS field offices nationwide.

Since President Clinton has indicated his desire to establish a national volunteer organization where citizens could help clean up the environment and perform other public service activities in return for college tuition assistance, the President may want to consider using the "Earth Team" as his vehicle to initiate his volunteer public service program.

Last year, SCS Earth Team volunteers donated over 400,000 hours of volunteer services assisting SCS in its mission of protecting our nation's soil and water. These services included helping SCS employees in field offices, assisting district conservationists with soil surveys in the field, and other tasks as required. The "Earth Team" concept could be expanded so that **any** citizen wishing to perform public service work could enter any U.S. government office, not just an SCS office, and be given an application to join the "Earth Team."

The "Earth Team" would not have to be tied to USDA or SCS per se; rather, if the President desires, the "Earth Team" logo and concept could be used as the name and symbol of his national volunteer service organization.

"Earth Team" is a catchy, environmentally-friendly phrase in tune with the youth of today and their activist spirit. It's only two words--but it's a powerful name that could act as the catalyst to attract more volunteers to President Clinton's nationwide organization.

For your consideration, I am enclosing a VHS tape featuring two videos. The first video is "Take Pride in America," another recent national public service campaign designed to promote volunteerism. The tape was produced by USDA. The second video explains the "Earth Team" concept. This video could be shown to President Clinton along with this proposal to better inform him of the national "Earth Team" idea. Also included are two brochures describing the "Earth Team" as it currently exists within SCS.

Thank you for your interest in this proposal. I look forward to hearing from you soon.

National Archives

MOST conservationists are familiar with the contributions the Civilian Conservation Corps (CCC) made to forestry and recreational projects for the established conservation agencies of the 1930s, the Forest Service and National Park Service. But other agencies or their predecessors, such as the Fish and Wildlife Service, Bureau of Reclamation, Bureau of Land Management, and Soil Conservation Service (SCS), also made use of CCC labor. For example, CCC work enabled SCS to demonstrate the value of conservation activities. The federal role in soil and water conservation, therefore, did not end after the Great Depression and the termination of emergency employment programs.

Today, the CCC is the beneficiary of a positive public reputation that has obscured the history of problems that any large organization of individuals almost necessarily has. But that is not our story for now; it is the CCC's contribution to the cause of conservation.

## Putting young men to work

In 1932, one-fourth of America's men between the ages of 15 and 24 could not find work. Another 29 percent worked only part-time (8). Incoming president Franklin D. Roosevelt proposed on March 21, 1933, that Congress create "a civilian conservation corps to be used in simple work, not interfering with normal employment, and confining itself to forestry, the prevention of soil erosion, flood control and similar projects."

Congressional deliberations resulted in several alterations to Roosevelt's proposal, one of which held great significance for the future course of soil conservation. Major Robert Y. Stuart, chief of the Forest Service, asked that state and private land be made eligible as work areas. Otherwise, men from the East would have to be transported west of the Rocky Mountains, where 95 percent of the public domain lay (8). Stuart's argument was persuasive in part. The Act for the Relief of Unemployment allowed soil erosion control work on state and federal land, but restricted work on private land to activities already authorized under U.S. laws, such as controlling fire, disease, and pests in forests and "such work as is necessary in the public interest to control floods." The future of CCC work in soil conservation on private land henceforth depended on interpreting provisions of the act.

On the day Roosevelt signed the bill, Secretary of Agriculture Henry A. Wallace wired each governor to send a representative to Washington to discuss cooperation on forestry work. He also mentioned the flood control work and surmized that it "probably [included] control of soil erosion."

But soil conservation work was to be severely circumscribed. In April a U.S. Department of Agriculture (USDA) representative met with Roosevelt, who wanted CCC work on erosion and flood control directed to solving flooding problems over broad areas rather than benefiting an individual parcel of land. CCC Director Robert Fechner reiterated the president's reservations about work on private land to the governors in May.

Concern about the public's objections to expenditures of federal funds on private lands caused some of Roosevelt's reservations. He continued to warn Fechner about the criticism that too much work on private land would bring (3, 4). Also, Roosevelt, like many of his contemporaries, too often thought soil conservation required land use changes from cropland to woodland and was unfamiliar with the many conservation practices that could be installed on cropland with CCC labor. But he also had to heed the calls for a full share of CCC camps in those states where the acreage of public land was small. Thus, Roosevelt asked Fechner and Wallace to grant requests from midwestern states for

*Douglas Helms is historian, Soil Conservation Service, U.S. Department of Agriculture, Washington, D.C. 20013.*

ing the President's instructions because the "Act [CCC] is apparently a forestry Act."

## SCS assumes a greater role

If Roosevelt knew, and he probably did not, that soil erosion had been interpreted so broadly, he certainly did not reprimand anyone. The President appreciated an innovative mind, initiative, and a facility for bending the rules. Bennett received a compliment rather than a scolding. Years afterward, he told and retold the story of being summoned to the White House. Roosevelt explained how he, without detailed knowledge of the program, knew Bennett and his colleagues were doing a good job because established agricultural organizations wanted to absorb the new and as yet temporary agency. According to Roosevelt's political instincts, the desire for conquest was a measure of the quality of the prey.[1]

But Roosevelt did act to unify the programs by moving SES to USDA in March 1935. Bennett and his group's impressive showing were no small part in the President's decision to support and sign the Soil Conservation Act in April 1935. Later that month the newly renamed Soil Conservation Service took over more than 150 CCC camps previously under the general supervision of the Forest Service.

As the Depression continued, SCS assumed a greater role in supervising youth work through CCC. For example, in fiscal year 1937 an average of 70,000 enrollees occupied about 440 camps. Ninety percent of the camps worked not on the watershed-based demonstration projects but in a work area whose radius encompassed about 25,000 acres. As local communities began organizing soil conservation districts and signing cooperative agreements with USDA in 1937, SCS began supplying a CCC camp to further each district's conservation program (*11*). During the life of CCC, SCS supervised the work of more than 800 of the 4,500 camps. Black enrollees worked in more than 100 of those camps.

The expanded camp program brought CCC crews to new farming areas with a variety of conservation problems. Nonetheless, a majority of camps were located in the prairie states and eastward, especially the areas of row crop farming in hilly areas under humid conditions. The Reconnaissance Erosion Survey of 1934 provided additional guidance on where demonstrations were most needed. The map of CCC camps under the expanded program often coincided with maps of the areas of severe erosion.

In addition to the type work performed at Coon Valley in a dairying and general farming area, CCC crews also worked with orchardists in the Northeast. There, CCC labor was used as an inducement to get farmers to lay out orchards on the contour, build terraces and provide outlets for established orchards and, most importantly, plant cover crops (*9*).

## An agent of change

Generally, the CCC camps and demonstration projects served as agents for agricultural change. An SCS engineer reported from Columbus, Nebraska, that "the terracing prompted by the camp is the first that has been done in this county." Southern farmers had terraced land for a long time, but feared grassed outlets and waterways as sources of weeds. Thus, camp SCS-2, a black CCC camp at Collierville, Tennessee, received compliments for convincing tenants to accept Bermudagrass outlets and pastures. The project was judged to be the best example of such work in the state. Not one farmer in the Duck Creek Demonstration Project at Lindale, Texas, used Bermudagrass for soil conservation when the project began, but there were 2,138 acres of Bermudagrass a few years later (*14*). During an era when fertilizer was used sparingly, if at all, on pastures, the labor and supplies available through the CCC made possible a demonstration of the importance of pasture improvement.

As Hugh Benentt's plan to work with nature involved more vegetation, especially on highly erodible areas, there was a great need for planting materials. CCC crews worked at the nurseries established in conjunction with demonstration projects. Sometimes a CCC camp worked exclusively at a larger nursery. In 1936, after taking over the Bureau of Plant Industry's erosion nurseries, SCS had 48 major nurseries, which produced 130 million trees and seedlings for the CCC work areas and demonstration projects. CCC crews took to the pastures, range, and woods in the same year and collected 664,973 pounds of native grass seed and 1,647,064 pounds of conifer and hardwood seed for nursery stock (*10*).

Collecting grass seed was also part of the conservation program in semiarid areas, where regeneration of rangeland for grazing often involved CCC work in seeding and fencing for grazing distribution and contour furrowing, developing springs,

and building water spreaders and stock water dams for water conservation. Enrollees at Camp SCS-4 near Huron, South Dakota, for instance, spent most of their time in 1938 and 1939 building stockwater ponds. During the life of the SCS-supervised camps, enrollees built 134,167 miles of contour furrows to improve range and reduce erosion.

In areas of small, irrigated farms, work on leaky canals, overuse of water, and control of erosion on steep, irrigated slopes had to be incorporated into the program to attract cooperation. One strength of CCC and SCS leaders was their ability to recog-

[1]Bennett, Hugh H. "To the Rescue of Soil Conservation." Address to the National Association of Soil Conservation Districts, San Diego, California, February 2, 1955.

nize the need for new work and add it to the conservation program and concept.

Further west the mediterranean climate made the Pacific Coast a prime area for vineyards and orchards. As it did for orchards of the Northeast, SCS promoted contour planting and cover crops. Winter cover crops were particularly important on the Pacific Coast, where much of the rain falls during those months. On the Corralitos Creek Demonstration Project at Watsonville, California, enrollees worked on 29 miles of terraces and grade ditches and constructed 33 major outlet structures.

## A public land focus too

CCC work on farms and ranches provided the model for future SCS work with landowners. But CCC and SCS established some of their larger, coordinated projects on federal and state lands. The Rio Grande watershed above Elephant Butte Reservoir in New Mexico included both public and private lands. The reservoir, a Bureau of Reclamation project, had a capacity of 2.6 million acre-feet of water when completed in 1917. In the fall of 1935, SCS began deploying CCC camps to work on conservation measures to slow siltation of the reservoir. By 1937 silt had reduced the reservoir capacity 20 percent.

Enrollees from seven camps worked above the dam, while those from three camps below the dam concentrated on flood control for the towns. Within a year the 10 camps built 14 large impoundment dams and 49 smaller ones for stockwater and flood control, 6 miles of fence, and 900 miles of contour furrows. They dug 123,000 feet of ditches to divert water from gully heads. To further control gullies, they built 30,000 check dams, seeded or sodded 19.6 million square yards on banks, and planted 407,000 trees (*1*).

Some projects combined flood control for towns with water retention for agricultural uses. Camp SCS-4-N built a 2,400-foot, wire-bound rock diversion structure across Angel Canyon to protect El Rito, New Mexico, from flooding. The water was diverted along a 20,000-foot dike, where waterspreaders carried it to cultivated land and improved pasture.

Camp SCS-25 at Safford, Arizona, developed water spreaders for water infiltration on state lands in the Gila River Valley. Camp SCS-7 at Leeds, Utah, developed levees and dikes and built flood-control devices to protect irrigation systems.

Native American CCC enrollees worked under the auspices of the U.S. Department of the Interior's Indian Service, which carried out the functions of feeding, clothing, and transporting enrollees that the U.S. Army performed for other camps. SCS developed land management plans for several reservations, including the largest SCS work area, the Navajo Project. Along with other laborers, the Indian CCC workers installed numerous measures from the reservation's conservation plan (*5, 6*).

Enrollees at camp SCS-7, Warrenton, Oregon, participated in a project that became internationally known to experts on coastal sand dunes. A jetty built at the mouth of the Columbia River in the late 19th century resulted in scouring of the channel bottom. The sand drifted down the coast to be driven inland by strong winds onto the overgrazed sand dunes. This combination of events caused a wide sand flat, often covered by water at high tide. CCC enrollees logged and split fire-killed timber, donated by the county, to build a picket fence along the beach. They then planted European beachgrass on the dune that formed over the picket fence. The work restored the coastal area as a popular recreational site (*2, 7*).

Cooperative agreements with state highway departments allowed CCC enrollees to work on roadside erosion problems. Before the close of the CCC camps, 841 miles of roadside demonstration projects were completed (*12*).

To be sure, not all of the ideas for conservation originated with SCS. Local communities and states brought their problems to the attention of SCS and CCC officials. When the CCC program began, the Kansas Forestry, Fish, and Game Commission announced that it wanted to construct a series of lakes in state parks with CCC labor. The commission met objections that large structures were out of the purview of the CCC by agreeing to pay for materials and design work. The Forest Service supervised the work until SCS became part of USDA. The construction of each dam required the fulltime work of a CCC camp. The camps built at least seven lakes larger than 100 acres.

## CCC valuable to SCS

In retrospect, the material accomplishments of CCC activities, while important, seem less important than the educational experience for conservation. The work of the CCC crews was valuable to Bennett in proving the validity of his ideas about the benefits of concentrated conservation treatment of an entire watershed. The large-scale approach also permitted experimentation. Few of the conservationists' techniques were new, but the process of fitting them together was. The work led to the refinement and improvement of conservation measures still used today.

This experience, among both SCS staff and the enrollees, provided a trained, technical core of workers for SCS for years to come. Former enrollees joined the staff, and during the early years, CCC funds provided for nearly half of the agency's workforce.

In addition to contributing to the passage of the Soil Conservation Act of 1935, the CCC also was instrumental in helping the soil conservation district movement off to a healthy start. When the states began enacting soil conservation district laws in 1937, it came as no surprise to the SCS field force that the first districts were organized near CCC camp work areas.

CCC's real contribution, however, lay in proving the feasibility of conservation. The positive public attitude associated with CCC work, including soil conservation, helped to create an atmosphere in which soil conservation was regarded, at least in part, as a public responsibility.
