Mr. Todd Stern
Assistant to the President
The White House
Washington, DC 20500

'97 NOV 17 PM 1:15

Dear Mr. Stern:

President Clinton has stated that we cannot wait for a treaty to act regarding climate change. Since we Americans produce about a fourth of the world's greenhouse emissions, we **must** lead the world in reduction of such emissions. We need not wait for a treaty or a lead from another nation. We can begin reducing emissions now without any significant economic loss. President Clinton has said we will do this, so let's do it and cut the rhetoric. We can do as much if not more than the European Union and Japan are planning to do. Please go to Kyoto in December and adopt the agreement with legally-binding commitments to reduce greenhouse gas pollution to below 1990 levels by 2005.

Thank you for your efforts in working with the President. I support the President in his positions. Only occasionally, like now, do I want him to go further.

Sincerely,

A handwritten signature in cursive script, appearing to read "Bonnie Sumner".

Mr. Todd Stern
Assistant to the President
The White House
Washington, D.C., 20500

Dear Mr. Stern:

When you go to Kyoto for diplomatic negotiations for an international treaty against global warming in December, I hope you will realize that the weak U.S. position when we are the world's greatest emission culprit will threaten the treaty. If Clinton means what he states, "He must embrace solutions that allow us to continue to grow the economy, while we honor our global responsibilities and our responsibilities to our own children", he will have to commit himself with strong action on global warming.

Sincerely,
Sister Catherine Verbeten

Dear Mr. Stern,

'97 NOV 17 PM 1:13

Our current policy
on greenhouse gas reduction
is not strong enough. This
week's "Economist" makes
a strong case for
reductions below our (US)
current proposals now.

Industry arguments
about India and China
not having to make
changes under the Kyoto
treaty are specious.

Any thinking person can
discern that U.S. con-
sumption can and thus

greenhouse emissions
production) will remain
much greater ^{than theirs} for
decades to come.

We have an obligation
to future generations
to do more than the Asian tigers.

Sincerely,

JCB

ASSISTANT TO THE PRESIDENT

THE WHITE HOUSE

WASHINGTON, D.C. 20500

DEAR MR. STERN,

I AM WRITING TO URGE YOU TO GO TO KYOTO THIS
DECEMBER WITH A STRONGER US POLICY TO REDUCE
GREENHOUSE GASES. I URGE YOU TO SUPPORT REDUCTIONS
BELOW 1990 LEVELS, BEGINNING BY THE YEAR 2005, ^{SIMILAR TO} ~~THE~~
THE EUROPEAN UNION'S PLAN TO REDUCE CO₂ EMISSIONS
TO 15% BELOW 1990 LEVELS BY 2010.

WITH ONLY 4% OF THE WORLD'S HUMAN POPULATION, BUT
PRODUCING ALMOST ONE QUARTER OF THE WORLD'S GREENHOUSE
GASES, THE U.S. HAS A SPECIAL RESPONSIBILITY TO REDUCE
THE AMOUNT OF CO₂ BEING PRODUCED. WE SHOULD BE
LEADING THE WAY WITH A DETERMINED, FORWARD-THINKING,
COMMITMENT TO SUCH REDUCTION, NOT DRAGGING OUR HEELS
AND OFFERING ONLY ~~WAX~~ PROPOSALS FOLLOWING IT AND OUR
EUROPEAN ALLIES. U.S. POLICY MUST MATCH THE PRESIDENT'S RHETORIC!

THANK YOU, SINCERELY,

Gifford Teeple

Dear Mr. Stern:

I am writing to you concerning the upcoming international conference on the reduction of greenhouse gas pollution, and the U.S. position on this issue. I am appalled that this country is not willing to agree with the countries of the European Union (or even with Japan, which calls for more reduction, at an earlier stage, than the President's plan)

I urge the President to support the stronger restrictions agreed to by the European Union.

Sincerely yours

Marjorie Karlson
Marjorie Karlson

Mr. Todd Stern
Assistant to the President
The White House
Washington DC 20500

Dear Mr. Stern:

President Clinton has promised to pursue a comprehensive framework for reduction of greenhouse gases to help prevent global warming. As the Kyoto conference approaches, both the Japanese and the Europeans are proposing stronger restrictions on greenhouse gases than the United States has. Since we produce nearly 25% of the world's emissions of greenhouse gases, the United States has primary responsibility for leadership in solving this problem. The risks of not taking action (global warming, elevation of sea level, weather changes, and ecological damage) are too great to ignore. Greenhouse gases need to be reduced to below 1990 levels by 2010, as others are proposing.

The public has shown great interest and support in taking action to address global warming. Energy efficient technologies are available now that can reduce greenhouse emissions. President Clinton needs to take a leadership role, not only in Kyoto, but also here at home, in overcoming the lobbying of large energy companies. If he fails to do so, the consequences may be irreversible. I certainly would have expected George Bush or Bob Dole to take the position that any risk to large corporations would be unacceptable. As a Democrat, a physician, and a parent, I expect more from this President. I hope that you can convince him to live up to those expectations.

Sincerely,

A handwritten signature in blue ink, appearing to read "Michael Harris", is written over a horizontal line.

Michael Harris, M.D.

Nov-12, '97

'97 NOV 17 PM 1:07

Dear Mr. Stern:

Hope the Clinton administration will support a strong position on global warming similar to that of the European Union at the Kyoto Conference.

The overwhelming number of climate scientists leave little doubt that global warming is under way, possibly with catastrophic effects.

Hope the administration will have the fortitude to resist the expensive campaign of the fossil fuel and auto industries crying economic disaster.

These industries may be hurt, but the economy as a whole may well prosper with a shift to ~~fuel~~^{energy} efficiency and renewable energy which, according to a study by the Union of Concerned Scientists, will save more in the cost of energy than the shift will cost.

Show leadership befitting the world leader.

Yours Truly,

Richard Barsanti

Todd Stern

Climate Change issues coordinator
The White House

Dear Mr. Stern:

I offer my standing as a well-known oil-industry analyst and grassroots environmental activist to the White House, in connection with global warming policy.

Entrenched interests looking at the narrow bottom line are brazenly advocating the outrageous continuation of greenhouse-gas buildup, loss of species, and the total depletion of domestic oil supplies. According to the oil industry's Hubbert Curve, we will run out of oil in the U.S. by about 2020, based on early 1980s consumption. Unfortunately, the world-wide oil industry is set on keeping oil prices below the price of alternative fuels, so as to maximize demand and profit as long as there are any supplies. Currently there is such a multi-billion-dollar total subsidy to oil prices, that gasoline prices should be much higher. But the subsidies will continue if the nation allows them to. Agriculture may become the heaviest user of petroleum, which is alarming because of both the effect on the climate and the fact that supplies are finite.

I am in a position to impart to the American people the faulty reasoning of the oil lobby. The oil industry, as you may know, is not united against limiting greenhouse gas emissions. Some of the folks in the business who do resist change are actually at a loss to imagine any other line of work, such as renewable energy systems.

I co-founded the *Lundberg Letter* on oil-industry supply and price trends, in 1973. We predicted the nature of the second oil shock in 1979, earning us the media handle "the bible of the oil industry." In 1988 I started the Fossil Fuels Policy Action Institute, initially called a "global warming center" by the Washington press corps. In 1991 we formed the Alliance for a Paving Moratorium, and today we publish the popular *Auto-Free Times* magazine quarterly. The media still know me, and I attach a recent A.P. story on my career changes.

You could refer any reporters to me needing energy-industry background, particularly on the matter of how oil industry decisions are made. I know full well how hard it is to raise oil prices through taxes, which is why we work on halting new road construction internationally. (We support a policy of repairing existing roads and promoting alternative transportation, while reducing personal energy consumption.) I have written to Katie McGinty on my offer.

Sincerely,

Jan C. Lundberg

Freewheelin' Son Turns His Back on His Father's Car Crusade

From Associated Press

ARCATA—There was a day when Jan Lundberg was a master of the fossil fuel universe, living large in Los Angeles with his Mercedes, his yacht and his hired help.

He compiled gas station surveys, including the respected Lundberg Letter, which his late father, Dan Lundberg, founded in 1955, earning a comfortable living while helping oil companies increase market share. But something was wrong.

"L.A.," he says, "was killing me."

Now he's a 44-year-old vegetarian with a ponytail, clogs and a pant leg perpetually stuffed in his sock to keep his bike chain from eating it.

And the automobile is no longer his deity. It's his demon.

Lundberg defected to Arcata, a small college town and environmentalist haven in the northern part of the state. Here, he and a staff of scruffy volunteers publish the Auto-Free Times, a journal of "revolutionary ecology and economics" and "road-fighting news."

It's all part of his work to rid the Earth of cars and the pavement they roll on. And he has a battle cry that would pain most commuters in car-loving

California and beyond.

"Our message is not, 'Hand over your car keys,' and not, 'We want to rip up this road,' but, 'Let us join together to stop new road construction,'" says Lundberg, who heads the feisty Alliance for a Paving Moratorium, a coalition of more than 130 anti-highway groups worldwide.

Lundberg walks the walk. He sold his car in 1989, opting instead to walk, ride a bike or, on longer trips, use public transportation.

"Jan has a wonderful wide-eyed and radical view," says Ernest Callenbach, a Berkeley-based lecturer and author. In 1975, Callenbach published "Ecotopia," one of the first books to advocate a life in which autos play a minor role.

Since that time, the number of cars worldwide has increased 80% while the population has increased 30%, environmentalists say.

That has led to more cars than people in the United States—a major reason Lundberg predicts the U.S.A. will be out of oil in 25 years.

"Where are those antiwar protesters from the '60s?" Lundberg asks. "Many of them are in their homes, consuming."

Though he was an activist at UCLA in the early

Please see LUNDBERG, D3

Continued from D2

1970s, Lundberg is the first to admit he set aside his radical ways, in large part to please his father, and join the family business.

"I was probably the highest-paid 21-year-old in town," Lundberg says.

By the time of his father's death in 1986, Jan was the Lundberg Letter's editor. Dan Lundberg was a petroleum celebrity—a former CBS reporter, he had become a fixture in the media during the energy crises of the 1970s.

"It started to get pretty interesting when we predicted the second oil shock of 1979," Lundberg said. "That really put us on the map."

Through it all, Lundberg says his father was also an environmentalist who raised his family on an organic ranch and took his five children on extended sailing trips to ports around the world.

His father's death was a turning point. It allowed Jan Lundberg an opportunity to take hold of his own destiny as he drove from gas station to gas station, tabulating half-cent changes in gas prices.

"I decided: 'I hate this. I'm not going to pay people to do something I hate,'" Lundberg recalls.

His sister, Trilby, still runs what is now known as the Lundberg Survey. Jan—who hasn't spoken to his sister in years—split from the family after his father died.

"She's in a different world. She lives in the past," Lundberg said.

Trilby Lundberg did not return calls seeking comment.

Jan Lundberg says his father probably wouldn't think much of his work as an activist, or of his dreams—a moratorium on roads and parking lots, turning pavement into parks and adding bike lanes to major freeways.

His activism even led to his arrest this year during a mass bike ride on state Highway 101 to save ancient redwoods in the nearby

Headwaters Forest. A judge in Eureka dropped most of the charges against him.

During his short jail stint, Lundberg happened to meet 31-year-old Steve Palmer, a former wholesale auto-parts salesman who recently left Los Angeles.

He, too, has permanently parked his car.

"But I have misgivings about selling it because I don't want it back on the road," said Palmer, who lives in a tent in nearby McKinleyville and has become one of Lundberg's volunteers.

Lundberg's daughter, Vernell, unlike most 16-year-olds, has no interest in getting a driver's license. She's broken the law by climbing Headwaters Forest redwoods; she's embarking on a cross-country tour of environmental rallies to sing "ecoinusic" she and her father compose.

Soon, Jan hopes to pursue his music full-time and hand over the Alliance to his volunteers.

Asked how they make a living, Lundberg, Palmer and many others in Arcata say they help each other out.

They get their bikes fixed for free at the Anarchy Bike shop. Many have more than one job and share or trade whatever skills and goods they have. A local newspaper columnist, for example, plays the banjo on the street to subsidize his income.

"Even though we don't always live up to our own values, sometimes we return," Lundberg said, as he and others stood in the Arcata town square eating bread and cups of pea soup dished out by the local chapter of Food Not Bombs, a hunger relief organization.

As he walked back to his office, Lundberg yelled to two passersby.

"Down with cars, right?"

The two smiled and flashed him a couple of thumbs down.

Dear Mr. Stern,

Vice-President Gore & President Clinton have frequently spoken about the dangers of the "greenhouse effect" to our environment & economy.

Please make the U.S. a leader at the conference in Kyoto, Japan. We must commit to

reducing greenhouse gases asap
and as much as possible.

The current proposal - 1990 levels
between 2008 + 2015 - is totally
inadequate.

Frankly, I'm very disappointed
in the large gap between
what Mr. Gore says and what
this administration does re: the
environment. I look forward
to seeing some real changes in
our policy as the election
approaches!

The Kyoto conference is a
great place to start.

Thanks,

Dear Mr. Stern:

The president's current position and statements on reduction of greenhouse gas emissions are outrageous and represents his constant caving in to big money interests.

Make sure the U.S. goes to Kyoto with the kind of strengthened position that is needed to really address the issue. The president's stature as a world leader must not be destroyed by playing politics with American selfish corporate interests.

Sincerely
C.H. Steinberger

November 10, 1997

'97 NOV 14 PM5:01

The White House
Assistant to the President
Washington, DC 20500

Dear Mr. Stern,

I am writing to you in regards to climate change. I urge you to go to Kyoto with a stronger US policy to reduce greenhouse gases. I urge you to support reductions below 1990 levels, beginning by the year 2005. The US produces almost 1/4 of the world's greenhouse emissions, so we have a greater responsibility to do more.

It would be nice if US policy matched the President's rhetoric. "We can not wait until a (climate change) treaty is negotiated and ratified to act. We must begin now. The US will pursue a comprehensive framework." President Clinton, October 1997.

Emissions of CO₂ caused by the burning of fossil fuels, and deforestation, have led to an overall warming of our planet. Over 25 billion tons of CO₂ is released in our atmosphere annually. The US makes up only 4% of the human population, but we produce 20% of the world's greenhouse gases.

Scientists predict that unless greenhouse gases are reduced significantly, the Earth's average temperature will rise by 2 to 6 degrees Fahrenheit by the end of the next century.

Global warming will cause a rise in sea levels, melting glaciers and polar ice caps, erratic weather patterns including floods and droughts, agricultural damage and health and ecological damage including the spread of diseases and the destruction of highly sensitive ecosystems.

Over 2000 of the world's leading scientists agree that global warming is a serious threat that requires immediate action. 72% of the public support efforts to address global warming.

Coal, oil and auto lobbyists have launched a multi-million dollar campaign opposing any restrictions to greenhouse gas emissions and citing extreme economic damage (profits, actually) if restrictions are imposed. What happened to the electric car ?

According to the DOE, the US can convert to energy-efficient technologies without significant economic loss.

On December 1-10, 1997, an international conference will be held in Kyoto, Japan to adopt an agreement with legally-binding commitments to reduce greenhouse gas pollution. The European Union is calling for reducing CO2 emissions to 15% below 1990 levels by 2010. This plan is supported by over 150 nations. Japan is calling for a 5% reduction below 1990 levels by 2012. Clinton's recently released plan cuts greenhouse gases only to 1990 levels between 2008 and 2015.

If profit weren't the main concern here, would this conference even be happening ? I doubt it. It's amazing how human life is put behind greed.

Sincerely,

Alison Moski

294 Toilsome Hill Road

Racine, WI 53402

November 10, 1997

Dear Mr. Stern:

I am concerned not only by forecasts of "global warming" in the future, but by evidences of the damage being done right now—for instance, in the form of devastating Red River floods, consequent on warmer winters, rapid snow meltoff, with floodplains unable to handle floodwaters. I read also that our cars are faster, less miles per gallon and no regulations to change the picture.

I urge you to support a stronger U.S. policy to reduce greenhouse gases when you go to Kyoto to adopt an agreement with legally-binding commitments. I urge you to support U.S. reductions in greenhouse gases beginning 2005. The U.S. produces almost $\frac{1}{4}$ of the world's greenhouse emissions!

Sincerely,

H. Helen Peddle

Mr. Todd Stern
Assistant to the President
the White House
Washington, DC 20500

Dear Mr. Stern:

I am writing to urge you to support a stronger U.S. policy to reduce greenhouse gases. As the U.S. at present is probably the biggest producer of greenhouse emissions we must take responsibility for trying to solve the problem. Suppose half the Chinese people were driving cars within 10 years. We, the U.S., must set an example of restraint. Europeans pay much more for gasoline and seem to manage.

Please go to Kyoto and support reductions below 1990 levels. Pres. Clinton always has sounded in favor of a clean(er) environment. Now he must prove that he means it.

Sincerely (and hopefully)

Ellen McDonald

Mr. Todd Stern
Ass't. to the President
The White House
Washington, D.C. 20500

Dear Mr. Stern

I am hoping that President Clinton has instructed you to carry to Kyoto an urgent pursuit toward reduction of greenhouse gases so we can get on with the badly needed reforms to avoid climate disasters awaiting us soon. Although coal oil and auto lobbyists are waving big money around, remain steadfast in pushing towards more reduction and earlier target dates. Seventy-two percent of the public support efforts to address global warming. Industry knows how to correct the problems they face, they just don't want to spend the money to do it. Stockholders can afford to settle for a little less profit; they will benefit from the climate risk reduction, as well. More and more we begin to realize this is not about profit, but instead about sustainability Let's move ahead while we still can.

The world recognizes we perform well in times of war, but global warming is a war we cannot win....and cannot afford to lose.

I wish you eloquence and success.

Respectfully yours,

Hal & Mary Flanders

8 November 1997

Dear Mr. Stern,

President Clinton talks a concern on the climate change which is threatening all of us, but his announced position for the Kyoto agreement does not support what he says.

Surely the U.S. can do better in reducing green house gases. Since the U.S. produces almost one-fourth of the world's green-houses gasses, even with only 4% of the world's population, we must take the lead in supporting strong measures to reduce those emissions.

I can understand why coal,oil and automotive interests fear extreme economic damage if restrictions are imposed. But how can they make profits in a world where the oceans have risen to wipe out seaside businesses and habitations? If our Department of energy says we can convert to energy-efficient technologies without significant economic, and other nations say they can, why can't our coal-oil-automotive industries do likewise?!

Dear Mr. Stern,

It is clear that we cannot sustain our ecology with CO₂ emissions at 1990 levels. We must reduce emissions below that level and as the President has said, "We must begin now!" We lead the world in energy use and we must lead in conservation and new technologies. No legacy could be greater or more important for President Clinton to leave than real progress toward a sustainable economy and a healthy environment. The majority of scientists and voters agree. Dear Mr. Stern:

I understand that on December 1-10 an international conference will be held in Kyoto, Japan, to adopt an agreement with legally-binding commitments to reduce gas pollution, and that President Clinton has actually released a plan to cut greenhouse gases only to 1990 levels between 2008 and 2015, in shocking contrast to the calling of the European Union for reducing CO emissions to 15 percent below 1990 levels by 2010 this plan supported by over 150 nations.

Like all concerned Americans, I wonder why the United States is less concerned about environmental damage than is the rest of the world. I urge you to go to Kyoto with a stronger U.S. policy to reduce greenhouse gases. I do urge you to support reductions below 1990 levels, beginning by the year 2005. Since the U.S. produces almost a fourth of the world's greenhouse emissions, we have a greater responsibility to do more.

Reduce Greenhouse Gas

Dear Mr. Stern:

We are rapidly frying this one and only planet of ours to a CRISP. And the biggest we is us US Americans. We drive too much, we burn too much electricity, specially people like my neighbors who are afraid of raccoons and light up their place all night like a casino.

Already Mt. Kilimandjaro and Mt. Kenya have sharply reduced snowcaps so that severe draughts will result in the near future. I was just there and saw it myself.

Please lead the way. Somebody has got to start toning down. Right now nobody wants to be the first to retrench. Show us how to do it and **DO IT!**

STOP Global WARMING NOW.

The people will **love** you for it Mr. President

I keep your picture on my desk.
— your friend Huguet

Subscriber-at-Large

U.S. Position: On December 1-10, 1997, an international conference will be held in Kyoto, Japan to adopt an agreement with legally-binding commitments to reduce greenhouse gas pollution. The European Union is calling for reducing CO₂ emissions to 15 percent below 1990 levels by 2010. This plan is supported by over 150 nations. Japan is calling for a 5 percent reduction below 1990 levels by 2012. Clinton's recently released plan cuts greenhouse gases only to 1990 levels between 2008 and 2015.

This month is critical to hold President Clinton accountable and to urge him to change his position by signing the Ottawa landmines ban and proposing stronger restrictions on greenhouse gas emissions in Kyoto.

ACTION: Contact the Clinton Administration officials listed in the box. These people are the President's primary advisors on each issue. On landmines, urge Bob Bell to change the U.S. position by going to Ottawa and signing the treaty to ban landmines. Express your outrage that the U.S. still refuses to sign a ban that is supported by over 100 nations, including Russia. On climate change, urge Todd Stern to go to Kyoto with a stronger U.S. policy to reduce greenhouse gases. Urge him to support reductions below 1990 levels, beginning by the year 2005. Remind him that since the U.S. produces almost a fourth of the world's greenhouse emissions, we have a greater responsibility to do more. **Tell both advisors to have U.S. policy match the President's rhetoric.**

A Critical Month For Peace and the Environment Hold Clinton to his Rhetoric on Landmines and Climate Change

BACKGROUND: In December, two international conferences will be held that are vital for peace and the environment. Both conferences have generated world-wide public attention. Unfortunately, President Clinton's position on these issues is weak, at best. Why are these issues so critical now and why must President Clinton take a stronger position on them?

LANDMINES

The Rhetoric: "The U.S. will seek a worldwide agreement as soon as possible to end the use of all antipersonnel landmines." – President Clinton, May 1996.

The facts:

- Landmines serve one purpose – to kill or maim indiscriminately.
- There are an estimated 110 million landmines currently in the ground in 68 countries, injuring or killing one person every 22 minutes.
- The majority of its victims are civilians; 30-40% are innocent children.
- A landmine costs \$3 to purchase but \$500 - \$1,000 to remove.
- Although the Pentagon opposes a ban on antipersonnel landmines, 15 high-ranking military officers, including General Norman Schwarzkopf, support a ban, as do a majority of U.S. Senators.
- Public opposition to landmines elevated to new heights as the late Princess Diana campaigned for a ban. Last month, the Nobel Peace Prize was awarded to the International Campaign to Ban Landmines.
- Alternatives to landmines can protect national security and U.S. troops.

U.S. Position: On December 2-4, 1997 an international conference will be held in Ottawa, Canada where over 100 governments will sign a treaty banning the production, use, and stockpiling of antipersonnel landmines. President Clinton has sided with the Pentagon in opposing the treaty because it calls for a complete ban. Instead he supports several exceptions including the use of antipersonnel landmines in certain areas, allowing nations to withdraw from the treaty during armed conflict, and a nine year delay before the treaty goes into effect.

CLIMATE CHANGE

The Rhetoric: "We can not wait until a [climate change] treaty is negotiated and ratified to act. We must begin now...The U.S. will pursue a comprehensive framework." – President Clinton, October 1997.

The facts:

- Emissions of carbon dioxide (CO₂) caused by the burning of fossil fuels, and deforestation, have led to an overall warming of our planet.
- Over 25 billion tons of CO₂ is released in our atmosphere annually.
- The U.S. makes up only 4 percent of the human population, but we produce 20 percent of the world's greenhouse gases.
- Scientists predict that unless greenhouse gases are reduced substantially, the Earth's average temperature will rise by 2 to 6 degrees Fahrenheit by the end of the next century.
- Global warming will cause a rise in sea levels, melting glaciers and polar ice caps, erratic weather patterns including floods and droughts, agricultural damage and health and ecological damage including the spread of diseases and the destruction of sensitive ecosystems.
- Over 2000 of the world's leading scientists agree that global warming is a serious threat that requires immediate action.
- 72 percent of the public support efforts to address global warming.
- Coal, oil and auto lobbyists have launched a multi-million dollar campaign opposing any restrictions to greenhouse gas emissions and citing extreme economic damage if restrictions are imposed.
- According to the Department of Energy, the U.S. can convert to energy-efficient technologies without significant economic loss.

Assistant to the President
The White House
Washington D.C., 20500

Dear Mr. Stern,

I urge you to go to Kyoto with a much stronger message. We need to reduce greenhouse gases below 1990 levels and should do so by 2005. The U.S. makes up only 4% of the world's population, yet it produces almost a fourth of the world's greenhouse emissions.

While our country is experiencing relative economic prosperity is a perfect time to take on some of the global problems facing us all. It is a time for bold measures. The majority of Americans want global warming addressed. More than 2000 leading scientists agree immediate action is necessary. The rest of the world looks to the U.S. for leadership.

The fossil fuel and automotive industries are employing their perennial tactic claiming that any restrictions will hurt the economy. This excuse is used whenever industry does not want to change. Rather than accepting the scientific evidence necessitating change and putting energy into innovative and profitmaking technologies such as the Japanese and the Europeans are doing, these American businesses try to scare the American people. It is these tactics and backward thinking the President must counter. The U.S. can be a leader in "green technology". British Petroleum is a good example of a future oriented company, diversifying into alternative energy sources.

The President has used some strong rhetoric about climate change. I urge him to follow through with strong action. I believe the American people need a sense of purpose and important goals. Saving the environment for our children and grandchildren is a vital goal. Call industry's bluff and give us a mission!

Sincerely yours,

Bernadette Jones

Re: Global Warming

Dear Mr. Stern:

Please urge President Clinton to take a stronger position on the reduction of greenhouse gases. While our country produces almost a fourth of the world's greenhouse emissions, we are shamed by the administration's refusal to step up to the responsibility of leading in their reduction. The President's rhetoric is fine; his policy is not.

The U.S. policy should call for reduction of greenhouse gas emissions below 1990 levels by the year 2005. The President is making a grave error in putting economic concerns above the well-being of our planet. It is both morally *and* economically wrong to do so. Other countries, already recognizing the terrible danger our Earth home faces, are moving ahead of us in offsetting technology and profiting by doing so.

Do everything you can to convince the President that he should put forward a strong U.S. policy when the international conference on global warming convenes in Kyoto in December.

Sincerely, *Kmaloney*

'97 NOV 13 PM3:37

Dear Mr. Stern,

The upcoming Kyoto conference offers a unique opportunity to significantly reduce greenhouse gas pollution. Please urge President Clinton to hold to his words and work for a stronger reduction. The future can be a gift for other generations if we so will it. Or it can be a nightmare. May The U.S. lead the world to a safe future.

Mr. Todd Stern -

11/9/97

I would like to express my concerns regarding the upcoming international conference in Kyoto, Japan to reduce greenhouse gas pollution. Since the U.S. produces about 20% of these gases, we have a responsibility to be leaders in the campaign to reduce these emissions.

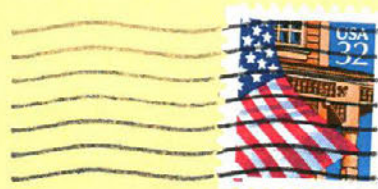

We are fortunate to be able to support research in this area and be a world leader in developing alternatives. This leadership will help to build our economy as well as contribute to a healthier world environment.

Please represent our nation at the conference by setting and supporting high standards in reducing CO₂ emissions below 1990 levels as soon as possible.

Thank You,

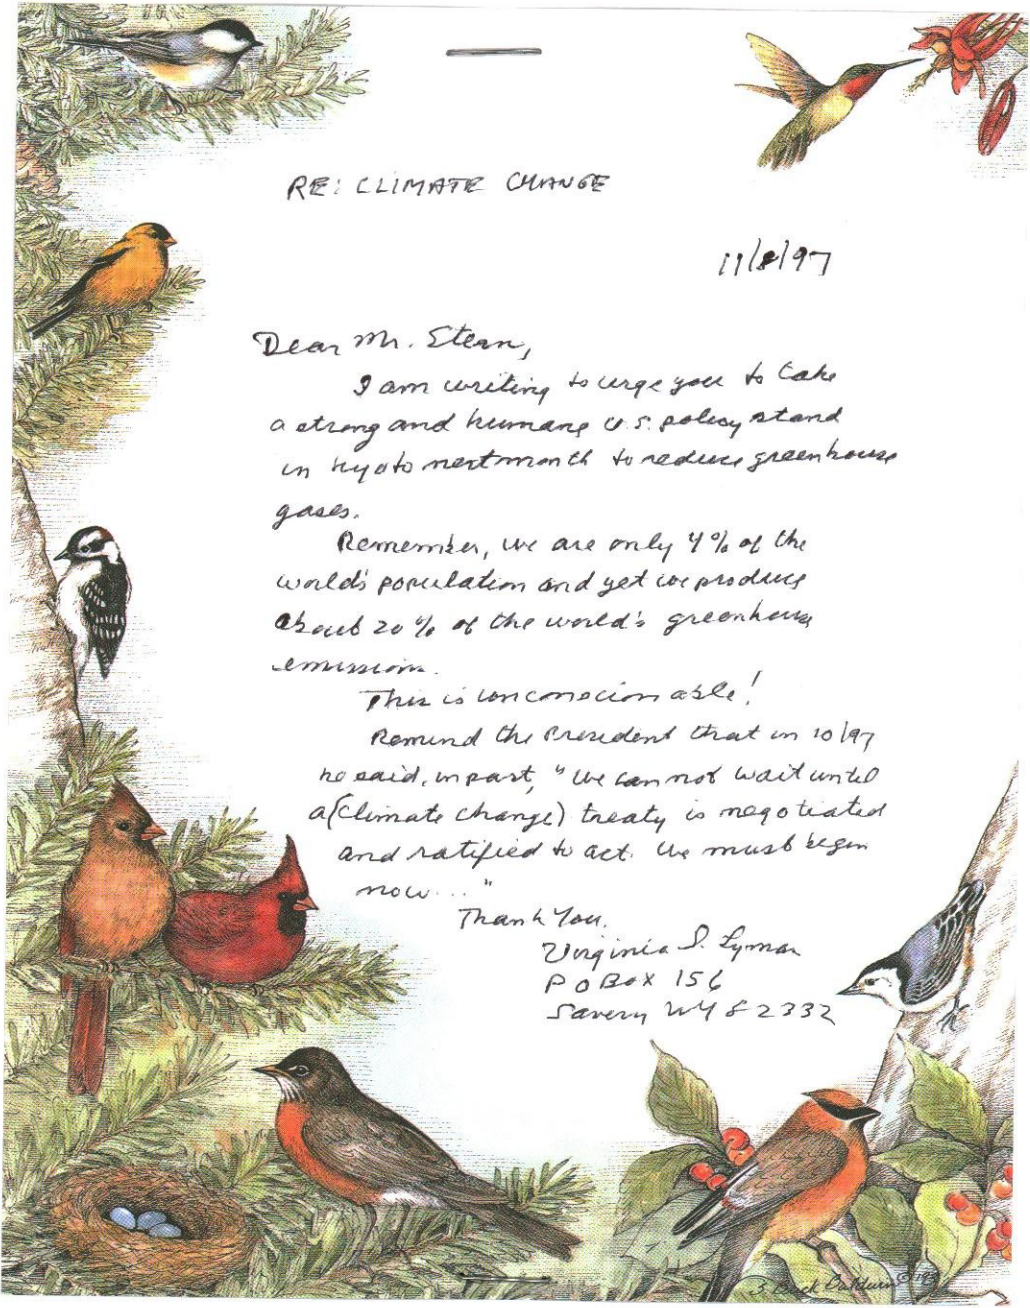

Anna Tye

Please help President Clinton to back up his
beliefs with actions!

RE: CLIMATE CHANGE

11/8/97

Dear Mr. Stein,

I am writing to urge you to take a strong and humane U.S. policy stand in Kyoto next month to reduce greenhouse gases.

Remember, we are only 4% of the world's population and yet we produce about 20% of the world's greenhouse emissions.

This is unconscionable!

Remind the President that in 1997 he said, in part, "We cannot wait until a (climate change) treaty is negotiated and ratified to act. We must begin now..."

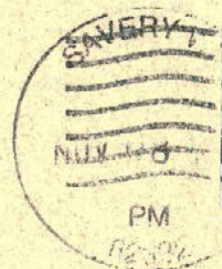

Thank You.

RE: U.S. Policy on greenhouse gasses

I hope that next month in Kyoto, our country takes a much stronger position regarding reduced carbon dioxide emissions.

I believe we should join the European Union by committing to reduce emissions to 15% below 1990 levels by 2010.

I feel confident that we *can* convert to energy efficient technologies without hardship.

Please support a cleaner environment in every way you can.

Thanks!

'97 NOV 12 PM3:56

Dear Mr. Stern,

I am embarrassed at the chasm between what President Clinton ^{has} said about leading the way away from global warming and what our official policy is

I am horrified at the potential world climate changes that are predicted if we don't reduce CO₂ emissions.

Please go to Kyoto with a goal of reducing emissions below 1990 levels by 2005.

Sincerely,

Betty Lou Wells

TRACY SIANI

Dear Mr. Stern,

'97 NOV 12 PM 3:58

Please urge President Clinton to go to Kyoto with more than rhetoric on reducing activities that cause global warming.

Do not let our free enterprise system lead us to short term riches. We need leadership to force us to adopt more stringent measures to curb our glut of greenhouse gases. There can be profit in adapting and adopting more energy efficient means.

Sincerely,

Tracy Siani

11/10/97

Dear Mr. Todd Stern,

I am writing to urge you to go to Kyoto with a stronger U.S. policy to reduce greenhouse gases. I urge you to support reductions below 1990 levels, beginning by the year 2005.

I am sure that you realize that the US produces almost a fourth of the world's greenhouse emissions, we have a greater responsibility to do more. We should be a leader in the world in reducing greenhouse gases instead of a nation which is tolerating dangerous emissions.

President Clinton speaks a good line about cleaning up the environment, now he has to put those words down on paper with other nations.

Respectfully,

Judith Gelwicks

RE: CLIMATE CHANGE

Dear Mr. Stern:

I am asking you to please go to the Kyoto international conference next month with a stronger U.S. policy to reduce greenhouse gases. Our administration needs to support reductions below 1990 levels, beginning by the year 2005. Since the U.S. produces almost a fourth of the world's greenhouse emissions, we have a greater responsibility to do more. U. S. policy needs to match the President's rhetoric.

Sincerely,

Christopher Milligan

Nov. 14, '97

Dear Mr. Stern,

Please go to Kyoto with a stronger U.S. policy to reduce greenhouse gases. Please step up to the challenge of reduction below 1990 levels as soon as possible.

Today anyone that reads is aware of the consequences of Global warming - It is no longer a situation that can be ignored. Thank you,

Carla Nightingale

Dear Mr. Stern:

Greenhouse gases present a very real danger and must be reduced. Reduction to 1990 levels is not good enough. The U.S. should have a stronger policy. This country has a particular responsibility to take a leadership position on this issue since almost $\frac{1}{4}$ of the world's greenhouse emissions come from this country.

When you go to Kyoto I urge a reduction below 1990 levels beginning by the year 2005.

Sincerely,

John B. Powell, Jr.
