

Content

Review series are designed in partnership with guest editors to highlight the most important topics and progress in the field.” A successful Review article provides a freestanding, topical, and balanced overview of the scientific topic, as well as an appreciation of its context. A Review is also an appropriate place to speculate or comment (positively or negatively) on related trends, but should not include unpublished data. Articles must be accessible and of interest to specialists and nonspecialists. Authors can expect significant editing to ensure that the article will appeal to the JCI's broad readership. All manuscripts undergo peer review prior to acceptance for publication. See published JCI Review series.

Deadline

Generally, a Review is due 4–6 months before the scheduled publication date. A specific deadline will be given at the time the Review is agreed upon.

Submission

Authors should submit 2 electronic files — MS Word and PDF — of the text and any figures and tables directly to the Editors at reviews@the-jci.org.

Publication

Along with the proof of the article, authors are given a tentative publication date. Note: Authors may not submit the manuscript to a preprint repository (e.g., bioRxiv, medRxiv) prior to publication by the Journal. The content is under embargo until the publication date.

Manuscript preparation

Length: Maximum 5,000 words, excluding the Abstract, Manuscript information, References, and Figure legends.

Display items: Maximum: 4 figures and 5 Tables.

Organization: Present the manuscript in the following consecutive sections: Title page, Abstract, Main text, Manuscript information, References, Figure legends, Tables.

Style: In general, authors should follow *AMA Manual of Style* for scientific/medical usage, as well as *Stedman's Medical Dictionary* and the *Chicago Manual of Style*.

Demographic terminology. Adhere to [NIH guidelines](#) or other applicable authoritative standards on reporting race and ethnicity; and use clear, unbiased, and up-to-date descriptors for any demographic identities.

Gene terminology. Style gene names and symbols according to official [NCBI Gene](#) nomenclature and present the terms according to [JCI Gene nomenclature and style](#).

Abbreviations. [JCI Standard abbreviations](#) may be used without definition. Nonstandard abbreviations should be spelled out at first use, with the abbreviated form following in parentheses. Thereafter, they may be used without definition. Abbreviations used only in figures should be defined in the accompanying legend. may be used without definition.

Main text

Authors/affiliations: On the title page, provide complete names of all authors in the appropriate order. In the author list, use consecutive, superscripted numerals to assign authors to their affiliations. Affiliations should include complete location: city, state/province (if applicable), and country.

Abstract: Maximum 200 words. Articles should include a short Abstract without references.

Subheadings: Maximum 8 words. Subheadings may be used throughout the main text.

Manuscript information

AI disclosure: Use of generative AI technology for written or visual content must be explicitly described, including the writing and organization of the manuscript, reference curation, and figure drafts. The disclosure should specify the task performed, the name and version of the AI tool, and the date or range of dates of use. Authors are responsible for verifying the accuracy of AI-generated content. Examples:

The initial draft of Figure 1 was created in BioRender with AI-assisted layout suggestions (October 1, 2026).

The authors used Microsoft Copilot in Edge to translate text from French to English in the section titled “Other implicated genes” (October 1, 2026).

The authors used Claude Sonnet 4.6 (Anthropic) to improve readability and flow (October 1, 2026).

Conflict of interest: Include a statement detailing any financial arrangements that could present a conflict of interest ([view Journal policy](#)). If no conflict exists, state “The authors have declared that no conflict of interest exists.”

Funding: List any sources of funding support for the current work, including, as appropriate, the grant name and number, funder, and recipient.

Acknowledgments: Authors may include appropriate acknowledgments to others for help and advice.

Address for correspondence: Complete name as well as mailing and email addresses of the responsible party/corresponding author.

References and reference citations

References: Maximum 200. For details and examples, see [How to prepare references](#).

Citations: References are cited in the text by sequential numerals in parentheses preceded by a space, e.g., “as described previously (1, 2)”;

“several research groups (4–10) have found.” Do not use superscript, boldface, italics, etc. Ongoing clinical trials may be cited in the text, with the trial registration number appearing in parentheses.

Figures and tables

Callouts: Figures and tables are called out in numerical order. “Figure,” “Table,” “Supplemental Figure,” “Supplemental Table,” etc., are spelled out. Callouts appear in parentheses (no boldface or italics) preceded by a space, unless grammatically part of the sentence: “the levels increased (Figure 5A)”;

“data shown in Table 2.” Figure parts are called out as, e.g., “Figure 1A,” “Figure 2, A and B,” “Figure 3, B–D.”

Figures: Maximum 4. Inclusion of original artwork is highly encouraged, particularly figures that illustrate specific points or provide a clear graphic overview of a difficult concept. Reproduction of previously published primary data is discouraged, and unpublished primary data and novel meta-analyses may not be included. At the time of submission, figures should be satisfactorily clear for peer review. Ensure that each figure fits on a single page, and use consecutive capital letters to indicate figure parts (A, B, C, etc.). Upon acceptance of the manuscript, editors work with the authors to develop final figures, and a Journal illustrator redraws all figures prior to publication.

Figure legends: Maximum 300 words. Each legend should begin with a brief, stand-alone title. Provide sufficient detail in the legend to make the figure intelligible without reference to the main text; define any symbols.

Tables: Maximum 5. Tables should be self-contained and self-explanatory, without subsections or subparts, and should fit on a single page. See [How to prepare tables for submission](#).

Checklist for manuscript submission

☐ Complete manuscript submitted as:

- ☐ PDF file
- ☐ MS Word or RTF file
- ☐ Maximum 5,000 words, excluding the Abstract, References, and Figure legends.
- ☐ Organized in the following consecutive, separate sections: Title page, Abstract, Main text (may be broken into subsections), Manuscript information, References, Figure legends, Tables.

☐ Style and usage

- ☐ Manuscript does not include unpublished data or novel meta-analyses.
- ☐ Demographic terminology adheres to NIH guidelines or other applicable authoritative standards on reporting race and ethnicity; clear, unbiased, and up-to-date descriptors are used for any demographic identities.
- ☐ JCI Standard Abbreviations and acronyms are used without definition. All other abbreviations and acronyms are spelled out at first appearance in the Abstract and main text (with the abbreviated form appearing in parentheses) and used without definition thereafter.
- ☐ All gene names and symbols conform to official [NCBI Gene nomenclature](#) and are presented according to [JCI Gene nomenclature and style](#).
- ☐ Terms such as *in vivo*, *in vitro*, etc., are not italicized.

☐ Main text

☐ Title page

- ☐ Title: maximum 15 words
- ☐ Complete names of all authors are listed in the appropriate order.
- ☐ Affiliations include city, state/province (if applicable), and country.
- ☐ Footnote numbers for author affiliations are superscripted and assigned consecutively.

☐ Abstract

- ☐ Maximum 200 words
- ☐ Does not contain references.

☐ Subheadings

- ☐ Maximum 8 words each; may be used throughout the main text.

☐ Manuscript information (in the following order)

☐ AI disclosure

- ☐ Disclose the use of artificial intelligence (AI) in research design as well as data extraction, analysis, and/or synthesis, including writing of the manuscript and preparation of figures, graphics, and other content.
- ☐ Specify the task performed, the name and version of the AI tool, and the date or range of dates of use.
- ☐ A statement indicating that the authors evaluated and take full responsibility for the output is also included, for example, "The authors assume full responsibility for ensuring the integrity and accuracy of AI output presented in this article."
- ☐ If AI was not used, state the following: "The authors declare that no AI tools were used in the original research for or writing of this article."
- ☐ See examples here

☐ Conflict of interest

- ☐ A statement consistent with the [Journal's conflict-of-interest policy](#); if no author has a conflict, state the following: "The authors have declared [or The author has declared] that no conflict of interest exists."

- ☐ If patents are involved, the patent or patent application number(s) are provided and the initials of the associated authors specified.

☐ Funding

- ☐ Sources of support as a list
- ☐ Includes all necessary identifying information; e.g., (a) name of the funders; (b) grant names and numbers; and (c) initials of recipient authors, as appropriate
- ☐ [NIH Public Access Policy compliance statement](#), if applicable.

☐ Acknowledgments

- ☐ Appropriate acknowledgments of, e.g., other scientists for help, advice, or gifts of drugs or animal models; formatted as a narrative paragraph.

☐ Address for correspondence

- ☐ The complete name as well as mailing and email addresses of the responsible party/corresponding author.

☐ References and Reference citations

- ☐ Maximum 200 references
- ☐ Formatted in accordance with JCI style (view [How to prepare references](#)).
- ☐ Numbered consecutively throughout the text.
- ☐ Citations in the text appear in parentheses (no footnotes or superscripts).
- ☐ Journal abbreviations in References are styled according to the [NLM Catalog](#).
- ☐ Titles of journals that do not appear in the NLM Catalog are written out in their entirety.

☐ Figures and Figure legends

- ☐ Maximum 4
- ☐ Legends: maximum 300 words each
- ☐ Figures are called out in order within the text. The word "Figure" is spelled out.
- ☐ Individual figures fit on a single page.
- ☐ Figure parts are labeled A, B, C, etc., and do not include lettered or numbered subparts.
- ☐ Each legend begins with a brief, stand-alone title.
- ☐ Use of terms within figure legends matches that in the figures themselves.
- ☐ Abbreviations introduced in figures are defined in the accompanying legend.
- ☐ Legends for figures reproduced or adapted from previously published material cite the appropriate reference for the source material and indicate the image's original figure or panel designation.

☐ Tables

- ☐ Prepared according to [How to prepare tables for submission](#).
- ☐ Prepared in Word table format (not pasted in from another application).
- ☐ Tables are called out in order within the text. The word "Table" is spelled out.
- ☐ Self-contained and self-explanatory.
- ☐ Preceded by brief titles.
- ☐ Each table fits on a single page (maximum 50 rows) and is presented on its own page.
- ☐ Callouts to footnotes (designated with superscript capital letters) are assigned alphabetically row by row.
- ☐ No subparts or subsections (for example, do not designate Table 1A and Table 1B).
- ☐ Column headings in tables apply to all values throughout the column; a new row of column headings may not be introduced within a table.
