

CHOBANI – NEW BERLIN, NY

CHOBANI

- 163,000 square foot plant-attached multi-temperature distribution facility
- Attached to manufacturing plant via conveyor bridge built over a busy county road in upstate New York
- Tippmann Group's staff from Interstate Warehousing assisted in training for the operations of the facility

Chobani is one of the fastest growing food companies in the world today. They knew they needed to build a new warehouse, but since they were on such a fast paced growth curve, it was difficult to define just how large the facility would need to be. Because of Chobani's continued growth, the size and scope of the project effectively doubled throughout the design and construction process, culminating in a 163,000 square foot plant-attached distribution facility.

The availability of land to build on was limited at the time, so it was determined that the best place to build was directly across a county road from their manufacturing plant. Tippmann Group came up with a plant-attached design and built a conveyor bridge over the busy county road in upstate New York.

Tippmann Group's warehouse owner/operator expertise came into play on this project as well, working with Chobani to explain the specific layout of the warehouse to maximize its efficiency. Interstate Warehousing, a Tippmann Group company, also assisted in the training, by bringing the Chobani team to the Interstate Warehousing facility in Franklin, Indiana to show them how a facility was run, while explaining the processes and procedures that are required to run a new building.

Shortly after that, Chobani came back to Tippmann looking to add a 3-story palletizing building to their plant. These projects opened the door for Tippmann Group to build Chobani's 1,000,000 square foot processing facility in Idaho at the same time.
