Strategic Alliances & Partnerships

SAP's choice for faster, safer, lower cost releases.

10x
faster testing

**Accelerate
release cycles**

Turbocharge your SAP innovation with the test automation platform that helps you make weekly (even daily) releases a reality.

90%
risk reduction

**Improve
software quality**

Protect your business processes with AI-powered risk analysis that enables zero defect releases and eliminates the need for hypercare.

50%
lower costs

**Reduce costs
with automation**

Use the platform that is AI-driven and codeless, shrinking testing costs by as much as 50% or more through reduced test volume and automation of manual tasks.

Deliver **quality at speed** with Tricentis

It's all here.

Today's data integrity landscape

To win in the digital economy you must deliver

Innovative, high-quality
business solutions

Trustworthy
data

And that's never been
more challenging.....

And that means

you must deliver both **quality at speed** across all your...

...everywhere in your organization

Today's data integrity landscape: Key stats

Data confidence is low: Only 35% of enterprise executives have a high level of trust in the way their organization uses data and analytics

Data errors erode your brand: 92% are concerned about the negative impact of data and analytics on the organization's reputation

IT bears the responsibility: 62% said technology functions, not the C-level and functional areas, bear responsibility for data quality

The data integrity landscape for SAP systems

- **SAP data errors are common:** In a 2020 ASUG survey, 53% of respondents said they experience data errors in SAP applications or reports after every update
- **Data migration concerns delay SAP modernization:** A joint survey with Tricentis & Capgemini found that the transfer of data to the new environment was the No. 1 reason for delay in migrating to advanced SAP versions

But you can't sacrifice quality for speed

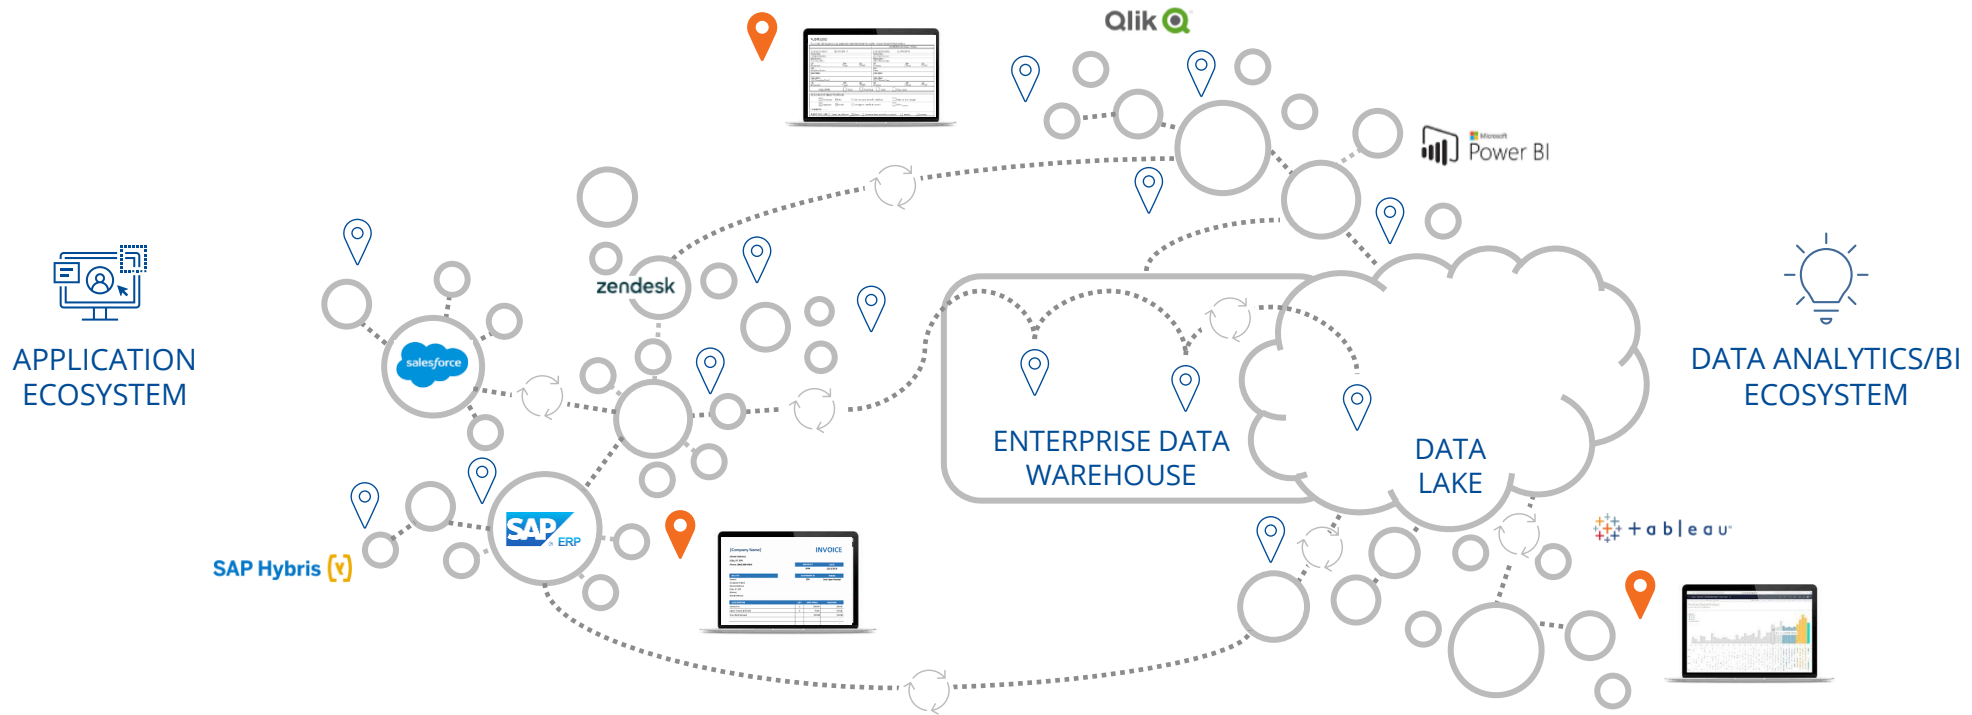

76% **Application leaders agree:**

Improving **speed and quality** is key to achieving top business goals

FORRESTER®
Sept. 2021

The cost of poor data quality

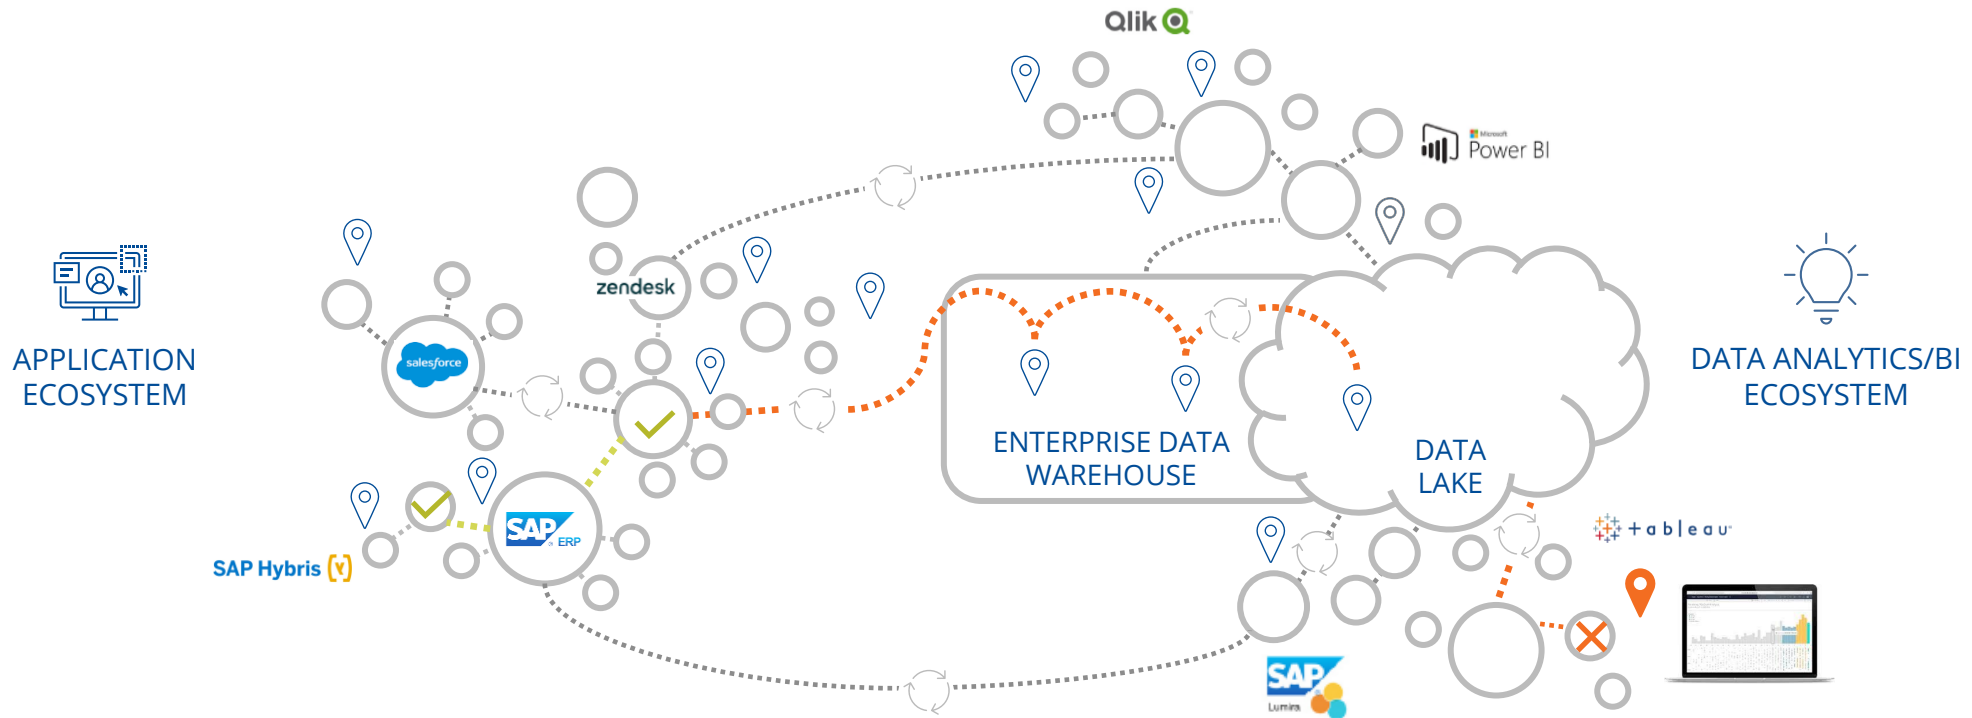

Today, your data is always on the move through increasingly complex landscapes

...to many different destinations

Your data can break

at any point on its journey

...and finding where it broke is time consuming and expensive

And that landscape is constantly changing

increasing the chance of errors with costly consequences

New demands from the business and regulators

More hands on your data

Changes to your application landscape

Changes to your data models and business rules

Costly consequences

for your brand and bottom line

Major
oil & gas
company

\$2.2 million
per month

Untrustworthy reports,
poor decision making,
data monetization issues

Costly consequences

for your brand and bottom line

Costly consequences

for your brand and bottom line

Untrustworthy reports,
poor decision making,
data monetization issues

Operational issues
across business
processes

Costly
compliance
issues

Major bank

\$50M+
in AML/KYC Fines

Costly consequences

for your brand and bottom line

Untrustworthy reports,
poor decision making,
data monetization issues

Operational issues
across business
processes

Costly
compliance
issues

Major
pharma
company

\$100's million
In failed innovation

Suboptimal
AI/ML-driven
initiatives

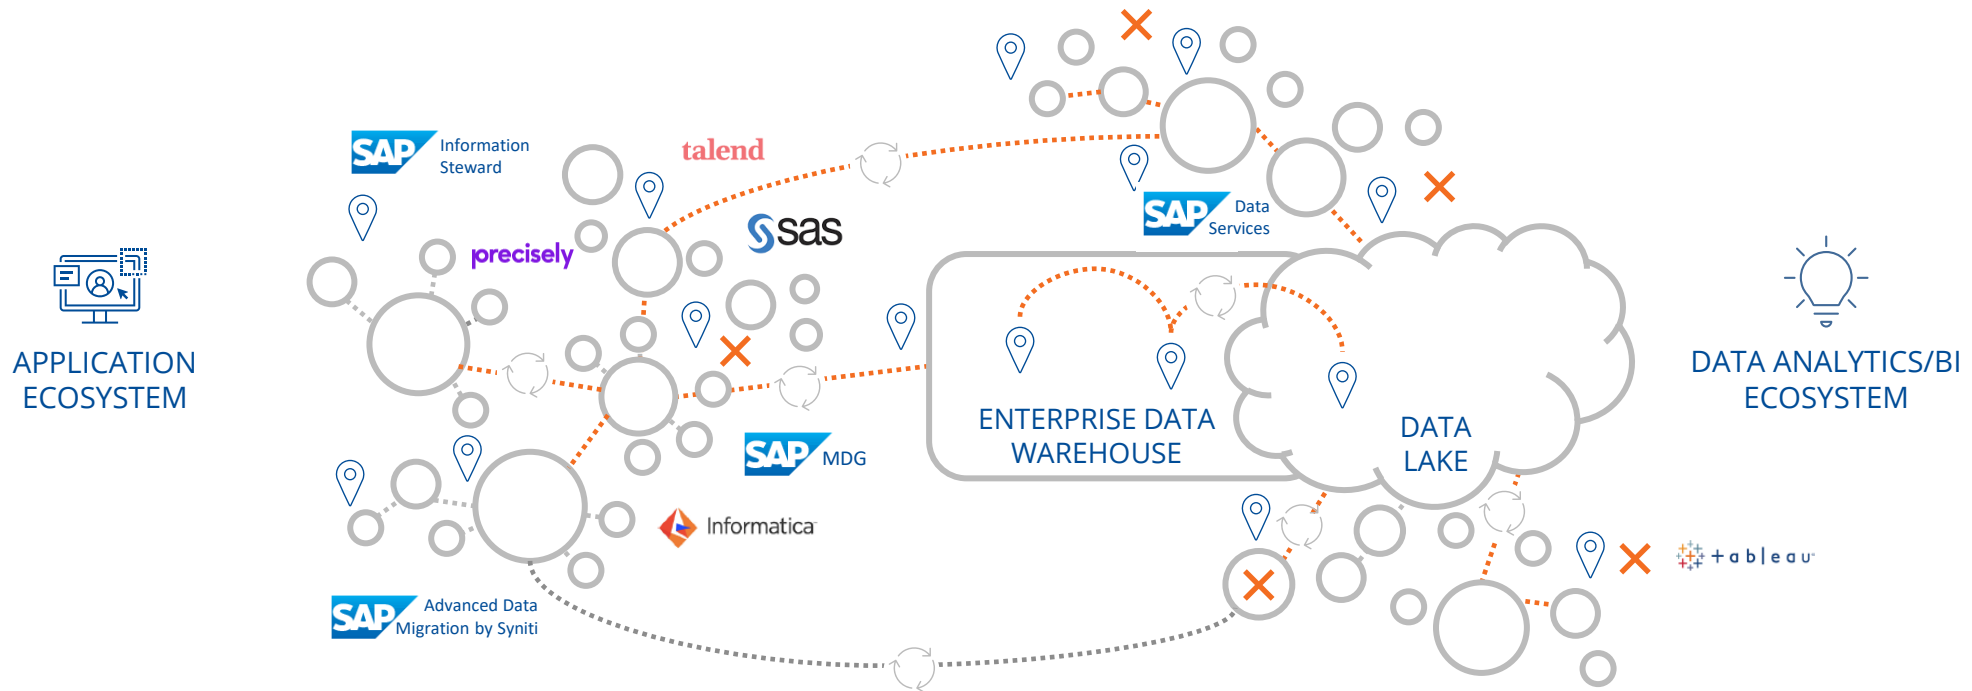

So why isn't your data
better already?

Manual “stare and compare” is
slow and doesn’t scale.

And is not a great use of your team’s brainpower.

Point solutions are great...

But leave dangerous data
management gaps

It's time to think **differently**
about how you maintain
the integrity of your data

It's time to bring the **discipline**
of end-to-end testing
to the world of data

Tricentis

Data Integrity

A data testing solution that's...

Includes data, UI, and API testing
for any data type — across your
entire landscape.

End-to-end

Automated

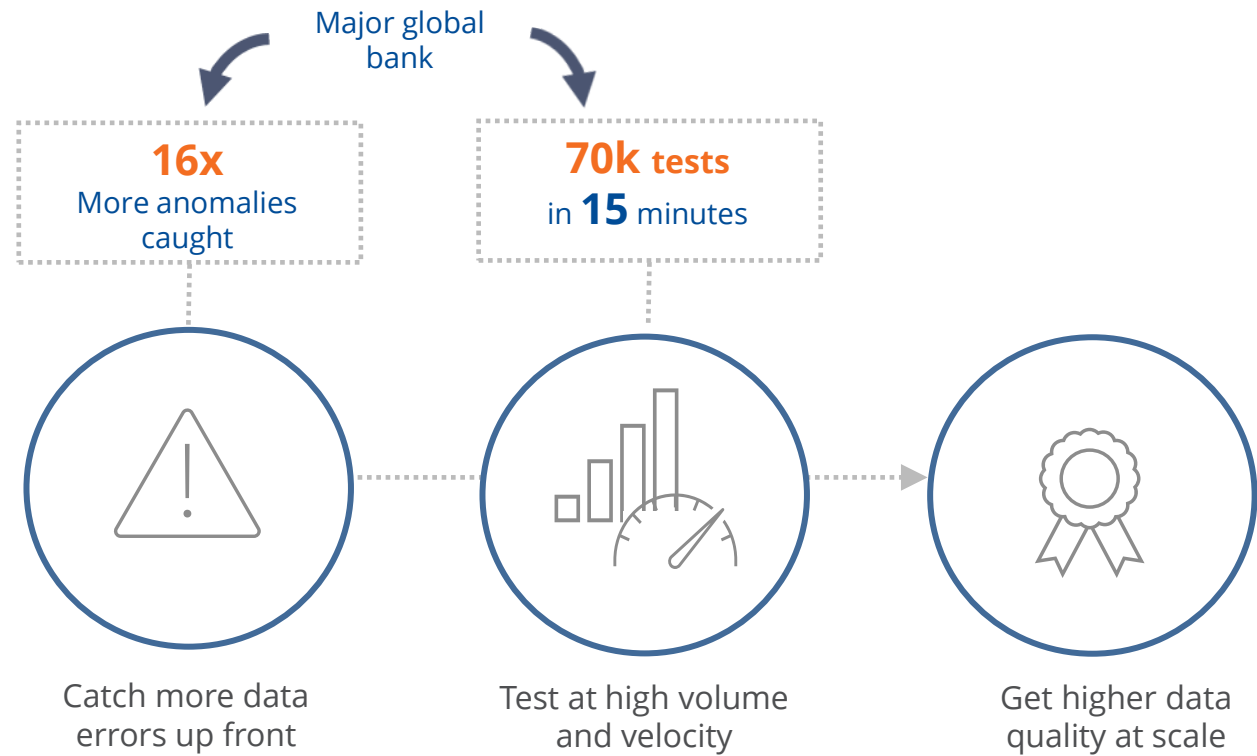

Continuous

Tricentis

Data Integrity

So, you can...

Tricentis

Data Integrity

Drive better business outcomes
through data you can trust

Make
better
decisions

Get more
reliable
processes

Be
more
compliant

Optimize
AI/ML
initiatives

Drive data
monetization
revenue

Drive better experiences
for customers and all
stakeholders, sooner

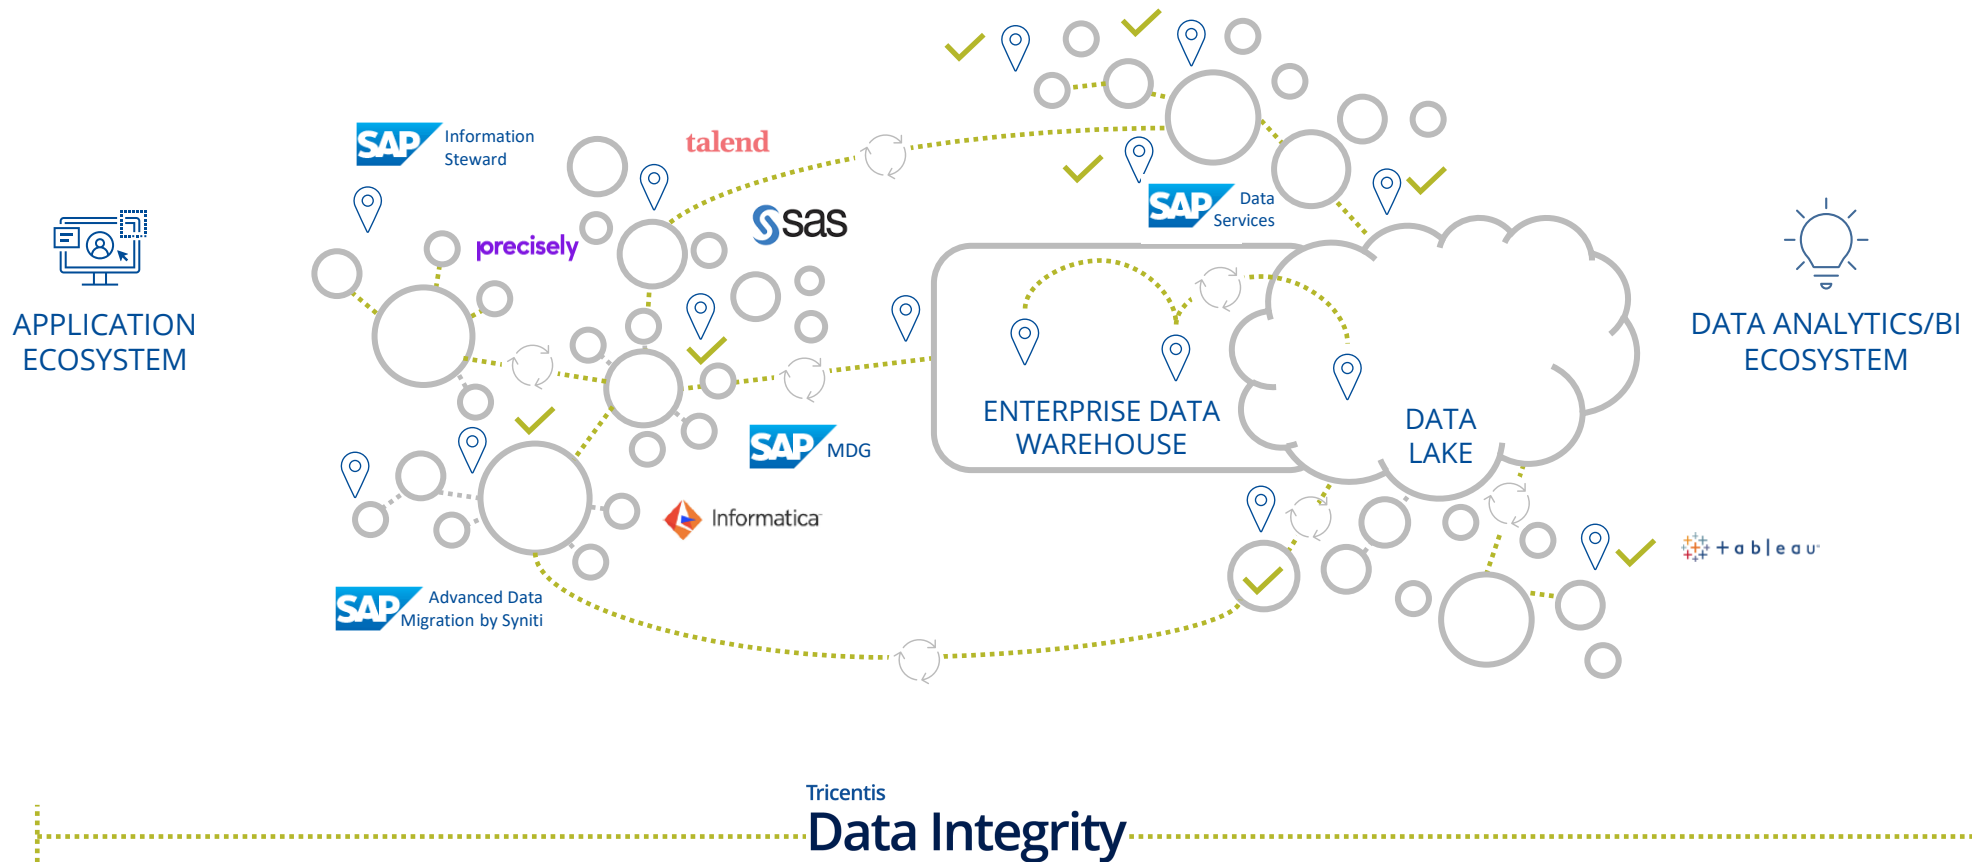

Increase
market share
and revenue

Reduce
risk and
costs

Fill your data management gaps

with data testing that's end-to-end, automated, and continuous

Maintain the integrity of your data on its journey

Across your data
analytics/B1 ecosystem

Deliver
trustworthy data

Across your app ecosystem
and business processes

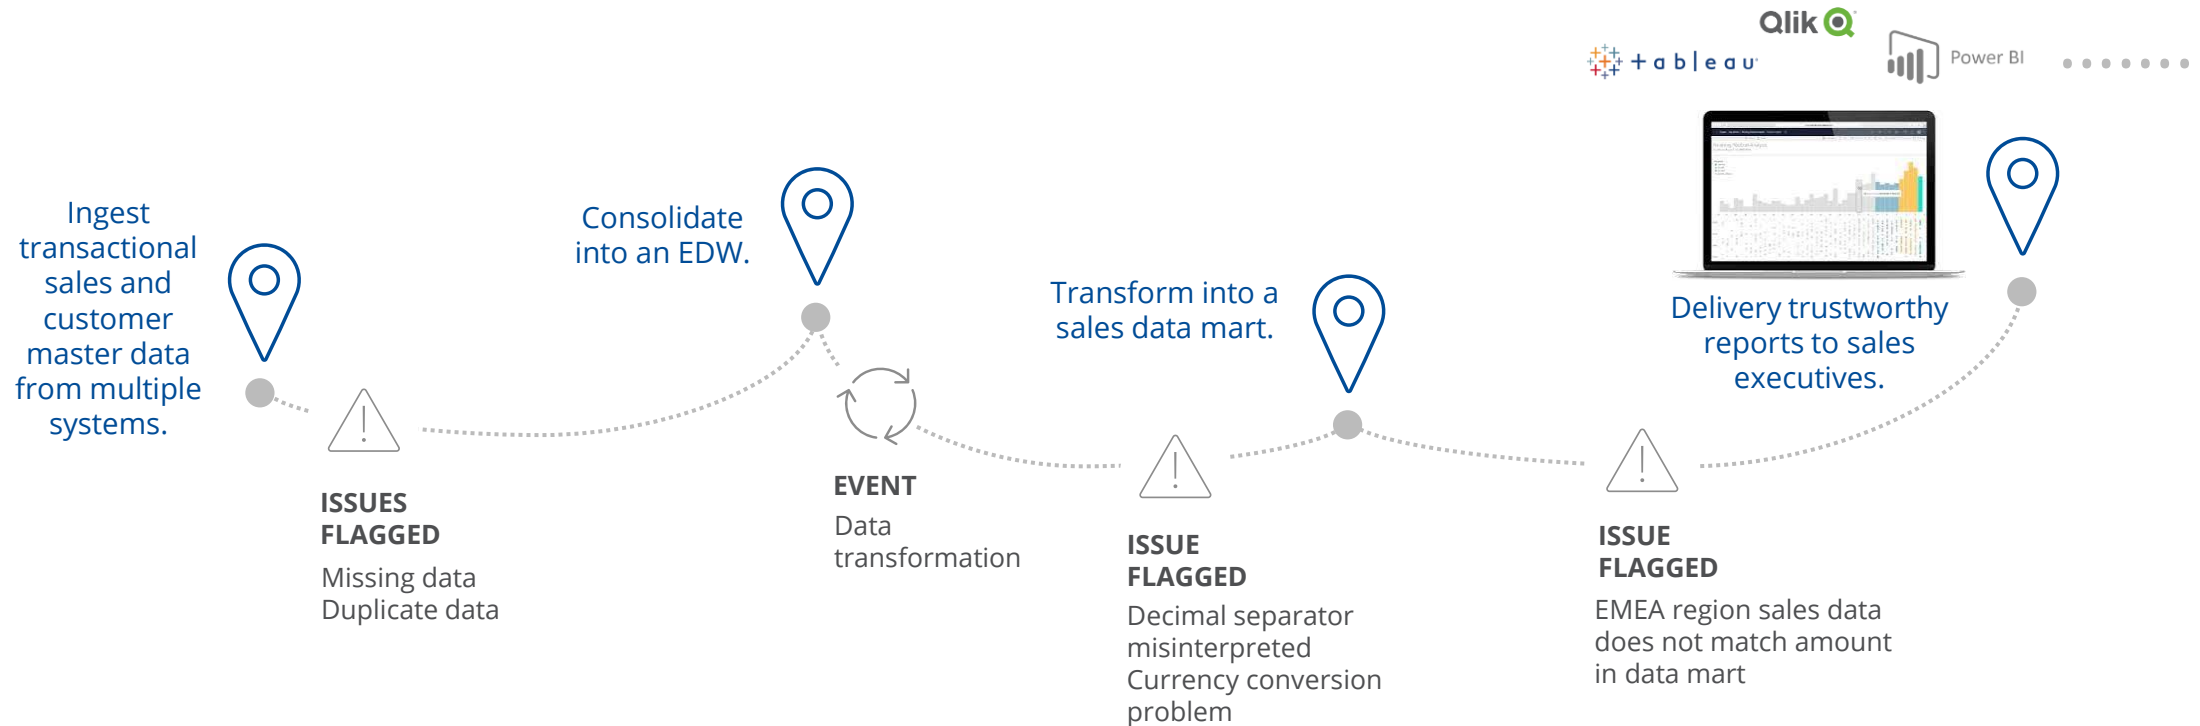

Keep operations
running smoothly

Deliver trustworthy data

Example scenario—sales analytics

Keep operations running smoothly

Example scenario—Finance AP invoicing

Ingest raw invoicing data from multiple ERP and accounting systems.

ISSUES FLAGGED

- Missing data
- Duplicate data
- Data not following business rules
 - Not matching metadata
 - Out of bounds, ranges

Consolidate into an EDW.

EVENT

Data transformation

Transform data into finance data mart.

ISSUE FLAGGED

- Transposition of amounts and other data elements
- Truncation of data
- Incorrect calculations

Send accurate consolidated invoices to B2B customers in PDF form.

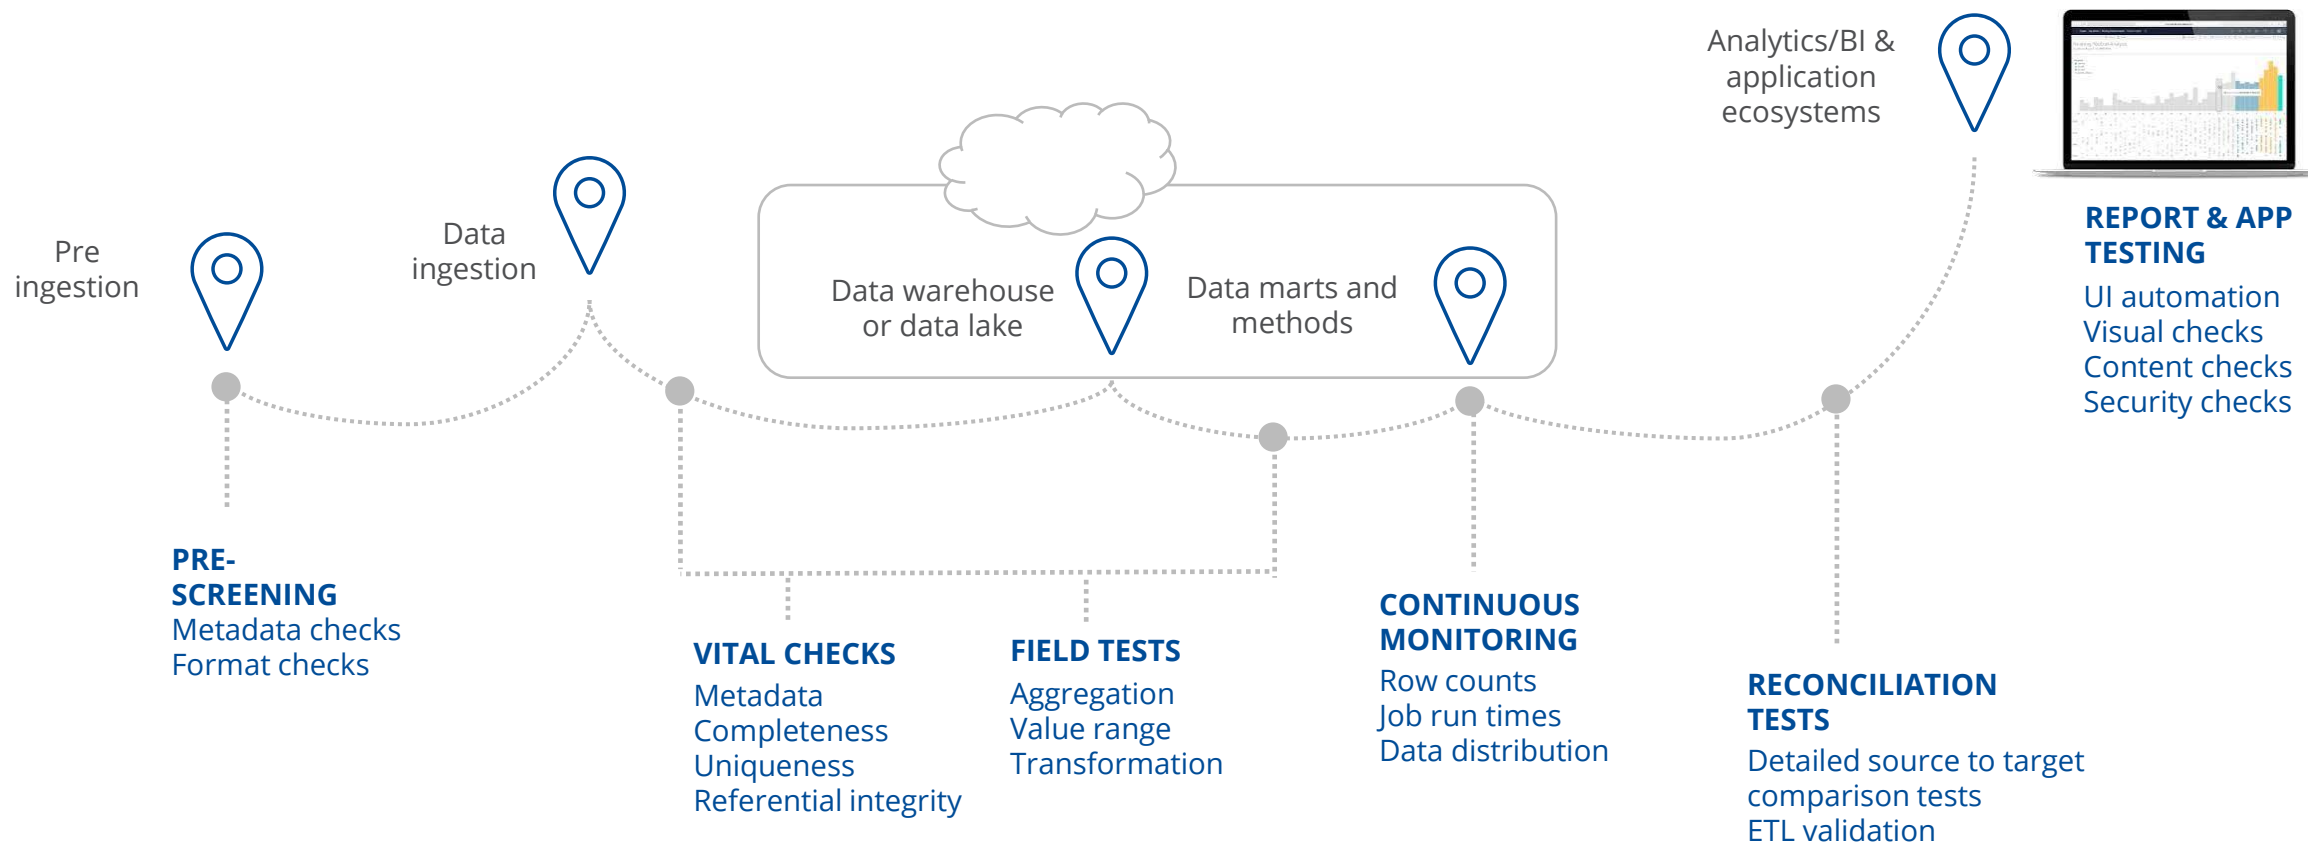

ISSUE FLAGGED

Outputs (Invoice PDFs) are incorrect to source data

Catch more errors

with tests tailored for each step of your data's journey

How DI works

to continuously
improve your data

Collaborate across teams to
build better tests—end-to-end

No-code, low-code tool
No expert SQL skills required

CREATE
model-based
data tests.

RUN

against data
at scale and
speed.

AUTOMATE

REPORT

Pinpoint
the root cause
of problems.

FIX

Get detailed,
actionable reports.

Customer case study

CASE STUDY

Mercedes-Benz drives better customer experiences and higher revenue through better data.

About

Mercedes-Benz Sales is responsible for selling Daimler's range of light commercial and passenger cars.

Mercedes-Benz Otomotiv is their legal entity in Turkey and is also an IT base and solution center delivery for more than 40 countries.

Business drivers

Drive better customer experiences across touchpoints and unlock new revenue potential by creating a centralized place for trusted customer 360 data.

Challenges

Project IDA—Integrated Data Architecture

- Complex transformation rules
- Large data volumes
- Frequent changes expected with source systems and new requirements to the IDA solution
- Lack of resources with advanced SQL and SAP BW skills

Initial manual test plan could not:

- Provide end-to-end coverage
- Handle volume
- Keep up with changing environment

Solution

End-to-end data testing for higher data quality at scale

Ingest customer master and transactional data from dealer, internal, and external systems.

Consolidate into EDW.

SAP BW/4HANA

Transform into data marts.

Provide access to trustworthy customer 360 data:

- Dealers and internal teams via web portal
- Systems via data feeds

ISSUES FLAGGED

Customer names being cut off due to data type mismatches

EVENT
Data transformation

ISSUE FLAGGED

Incorrect vehicle history for customers

Wrong revenue numbers for certain customers

ISSUE FLAGGED

API calls using fuzzy logic return wrong customers

Solution metrics

Solution

Billions
of rows
tested

400k+
rows tested in
< minute

1 test type
25 flexible
test cases
250+ variations

It's impossible for humans to test billions of rows of data. We can now test nearly half a million rows in just one minute. There's just no comparison.

**Ezgi Çetin, Test Automation Engineer,
Mercedes-Benz Otomotiv**

Business results

Results

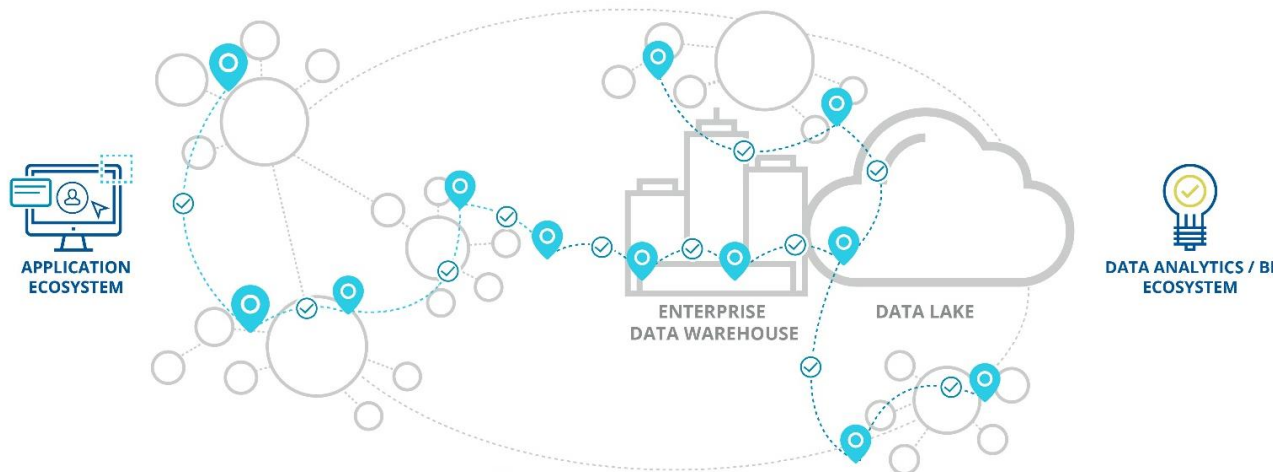

Is the data correct?

Drive better business outcomes through data you can trust

Tricentis capabilities

- Automated, end-to-end testing for any type of data and every data journey
- Tests tailored to catch errors on each step of the data journey
- Model-based test automation

Traditional approach

- Slow, “stare and compare” manual data testing that doesn’t scale
- Point data tools that leave dangerous data management gaps

Tricentis customers

- Catch more data errors upfront
- Test at high volume and velocity
- Deliver higher quality analytical and operational data at scale
