Reference: SAP Using SAP Fiori Today

SAP adopted SAP Fiori as main UI in 2014 and in May 2019 the entire landscape transitioned to Fiori 3.

- **16,000+** iPads, **66,000+** iPhones, **20,000+** Mac devices
- **350+** SAP Fiori launchpad tiles productive
- **100,000+** unique users in a single month
- **1,700,000+** visits on the SAP Fiori launchpad in a single month
- **17 catalogues, 13 roles, 10 groups**

SAP S/4HANA®

Business Scope Release 2020

Supply Chain

“Smart logistics accounts for more than 50% of overall supply chain cost savings.”

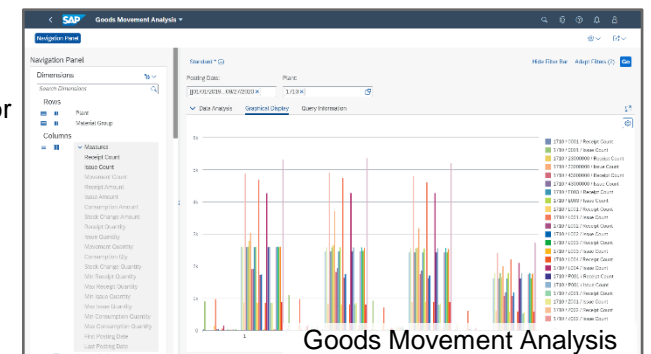

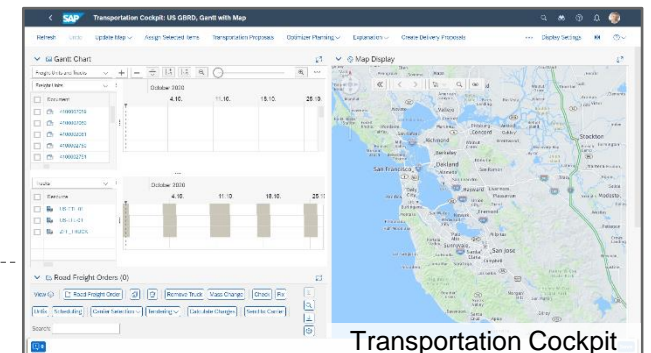

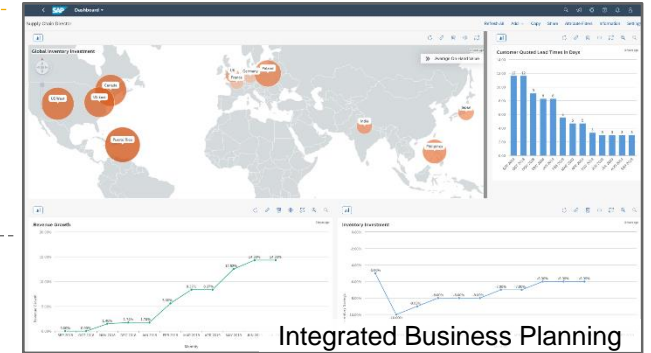

PWC, 2020

SAP S/4HANA: Supply Chain Overview

Suite LoB Solutions

- additional license
- additional installation

- Integrated Business Planning
- SAP Warehouse Insights
- Global Batch Traceability
- Logistics Business Network
- Extended Warehouse Management & Transportation Management (side by side for Hub Deployment)

SAP S/4HANA LoB Apps

- additional license

Extended Service Parts Planning

Plan service parts inventory accurately across distribution networks, based on parts volumes, velocity, and segments; strategically calculate trade-offs between costs and service.

Advanced Warehousing

Deliver the optimal order by leveraging features like cross-docking, workforce management, slotting, inventory optimization, and support for transit warehousing as well as connectivity to warehouse automation equipment.

Advanced Transportation

Improve transportation efficiency by holistically managing all inbound and outbound freight.

Advanced Order Promising

Commit to orders quickly and accurately by automatically considering the relevant stock in real-time, while protecting companies business priorities and profitability goals.

Inventory

Track and control inventory and stock quantities in a transparent manner and ensure a streamlined material flow across all in and outbound logistics operations.

Warehousing

Store and handle your goods and materials efficiently. Improve asset usage, increase throughput and support accurate on-time order fulfillment with a maximum of warehouse transparency.

Delivery and Transportation

Orchestrate all your delivery demands, plan and execute your transports, using functionality for basic agency billing and subcontracting. Ship the right products to the right place at the right time.

Order Promising

Determine accurate estimates of delivery dates during order creation and changes considering material availability based on actual stock information to enhance customer satisfaction.

Logistics Material Identification

Manage Batches, Serial Numbers and Handling Units to increase efficiency and improve compliance across your shipping and warehousing operations.

SAP S/4HANA

Enterprise Management

SAP S/4HANA Supply Chain

Inventory

Goods Movement

Use simplified GI postings for **transfer and scrapping**. Experience real-time, high-volume processing using sensor data. Benefit from locking elimination and **material ledger valuation**. Use simplified apps for

- **Goods Receipt for PO**
- **Initial entry**
- **Goods Receipt without reference**

Inventory Analytics and Control

Experience the power of simplification by using **state-of-the-art analytical apps**, which take full advantage of the **simplified data model** incl. 40 digit mat-no. and the **power of the HANA database**. Optimize inventory and material flows based on **real-time information**. Use simplified apps for

- **Dead Stock Analysis**
- **Slow or Non-Moving Materials**

Returnable Packaging Logistics

Track shipping and receiving of returnable packaging materials to and from business partners. Gain visibility in **materials distribution** and reduce overall volume of materials by integrating logistics information into a **single version of the truth**.

Physical Inventory

Enable **real-time reporting** on your warehouse stocks and inventory. Record the **physical quantities** of your warehouse stocks (own stock and other stock types). Enable faster and more-efficient **inventory adjustments**.

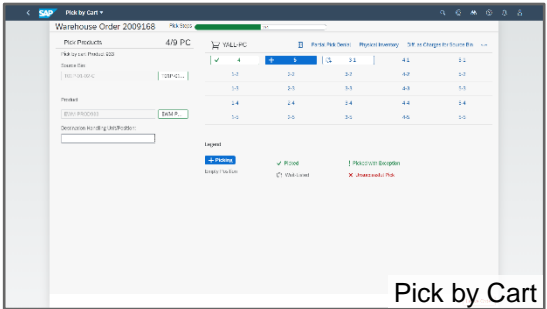

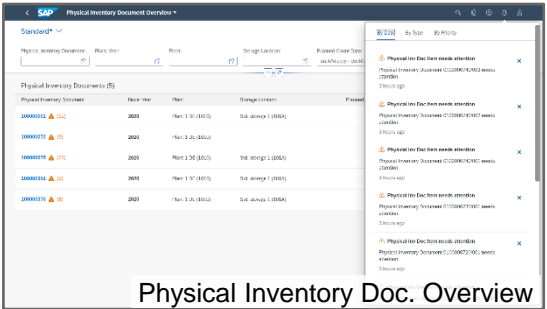

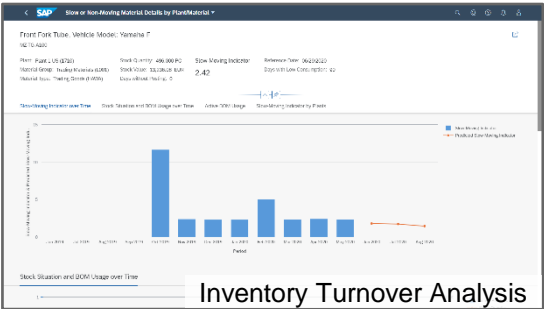

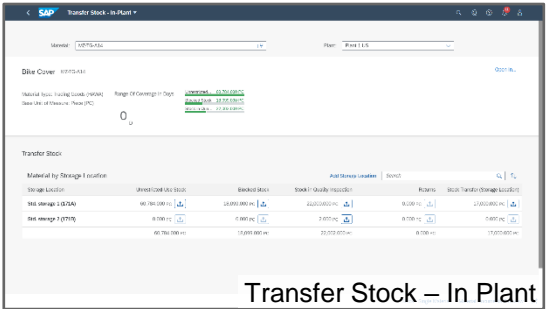

Empties Management

Track empties to and from business partners, capture detailed data, accurately record high-volume transactions for **empties returns and connected deposits**.

Warehousing

Warehouse Management

Leverage embedded EWM to perform standardized **inbound & outbound processing** with **internal movements, physical inventory and reporting in one system** (master data, customizing & UX). Track alternative quantities with integrated **Catch Weight Management**.

SAP S/4HANA Supply Chain

Logistics Material Identification

Batch Management

Leverage batch management to improve your product quality, ensure **end-to-end traceability**, and reduce customer and legal risks.

- Create **batch master records** and assign specific batch numbers.
- **Classify batches** and assign characteristics.
- Build a **batch genealogy** to automatically comply with legal requirements and track the batches.

Manage Batches

Serial Number Management

Identify and differentiate between individual items of a material or equipment:

- Create **specific serial number profiles** for materials.
- Create **serial number master records** to carry important data on the serialized material.
- **Identify single items to track** in inventory management, physical inventory, and equipment.

Handling Unit Management

Reflect packing-based logistics structures and **track the movements of entire handling units** rather than each material individually. Manage materials that are relevant for **segmentation in handling units** from cartons to containers. Use handling unit management in inbound and outbound business processes, goods movement, and transfer posting to **improve product traceability**. Expand on the existing packing function in shipping and warehouse processing.

Delivery and Transportation

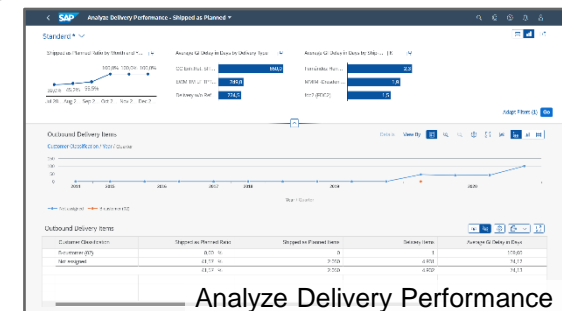

Delivery Management

Execute and confirm on transportation demands from all sources (Sales Order, Purchase Order, Stock Transport Order) in an automated fashion. Leverage **electronic collaboration** to accelerate the process and **avoid redundancies** and human error.

Manage Outbound Deliveries

Transportation Management

Leverage **embedded Transportation Management** to handle **freight agreements** and **delivery based charges** as well as basic bookings, **plan and carry out** your transports, use functionality for **basic agency billing** and **subcontracting** as well as **dangerous goods** management.

Order Promising

Available to Promise

Available to promise: **new ATP algorithm** based on HANA embedded in mass component check in production. Improve percentage **on-time delivery**. Leverage **just-in-time** scenarios for inbound and outbound.

SAP S/4HANA LoB Solutions in Supply Chain

SAP S/4HANA LoB Solutions in Supply Chain

Advanced Warehousing

Extended Warehouse Management with SAP S/4HANA supports all levels of warehouse complexity. Use the **extended functionality** of **SAP S/4HANA Warehouse Management** to **optimize all warehouse operations** with no data duplication and reconciliation efforts.

Advanced Transportation

Embedded Transportation Management provides **best-of-breed functionality** seamlessly integrated into the digital core, streamlining processes and reducing the need to replicate data to a decentralized TM system. SAP S/4HANA offers modern transportation management to customers, who want to leverage **enhanced transportation** functionality. The new deployment option also allows customers to run advanced transportation management processes embedded in SAP S/4HANA removing the necessity for costly data replication and additional hardware.

Advanced Order Promising

Advanced Order Promising/ATP is a new functionality to optimize the complete Available to Promise process with simplified UI in a harmonized flow. The solution comprises **Availability Check, Backorder Processing, Product Allocation & Release for Delivery**.

Extended Service Parts Planning

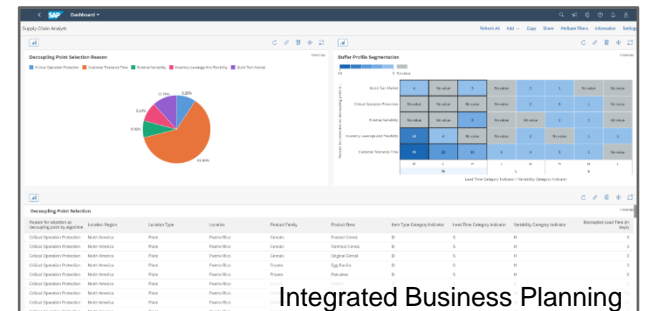

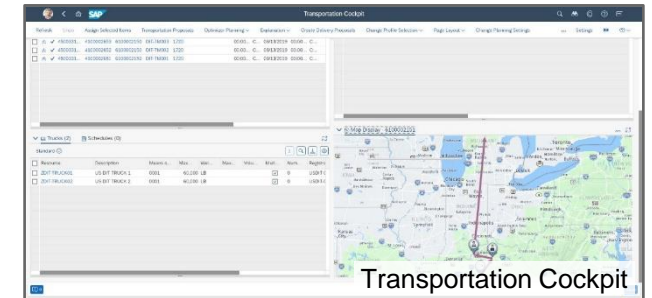

Extended Service Parts Planning (eSPP) provides planning functions specific to service parts and transparency throughout the supply chain, right from the moment demand occurs through to the delivery of the product. It allows to plan inventory across a distribution network based on the part volume, velocity, segments, and other practical business rules. It further supports out of the box business process collaboration for the suppliers.

Additional Suite Solutions in Supply Chain

For Superior Planning and Extended Supply Chain Functions you can also integrate into:

- SAP Integrated Business Planning
- SAP Global Batch Traceability
- SAP Logistics Business Network
- SAP Extended Warehouse Management & SAP Transportation Management (side by side for Hub Deployment)
- SAP Warehouse Insights

Situation Handling in Physical Inventory

Inventory

W/O Situation Handling

When to start counting?

Communication lags between inventory manager and warehouse clerks → **Inefficient timing**

Difference identified?

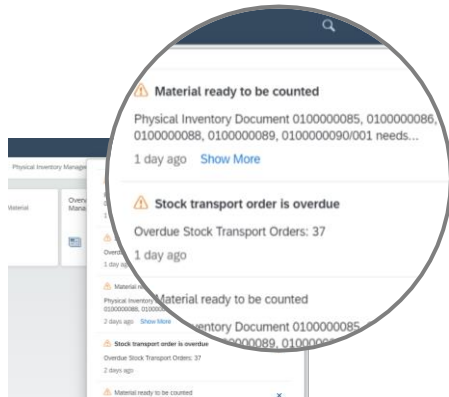

Manual identification of differences
→ **High manual effort**
→ **Error prone**

When to post?

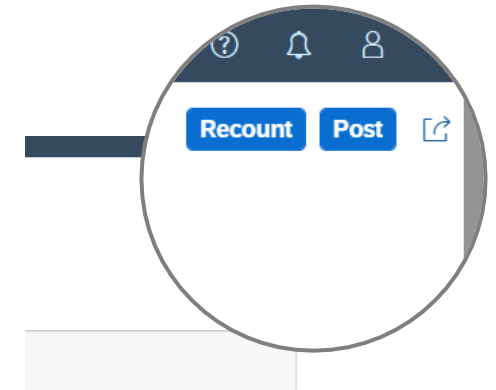

No fallback in case of delayed or forgotten posting
→ **Process interruptions**
e.g. **blocking of material**

Material ready to be counted ✓
1 min. ago
Physical Inventory Document 0100000085/001 needs attention.
[Close Situation](#)

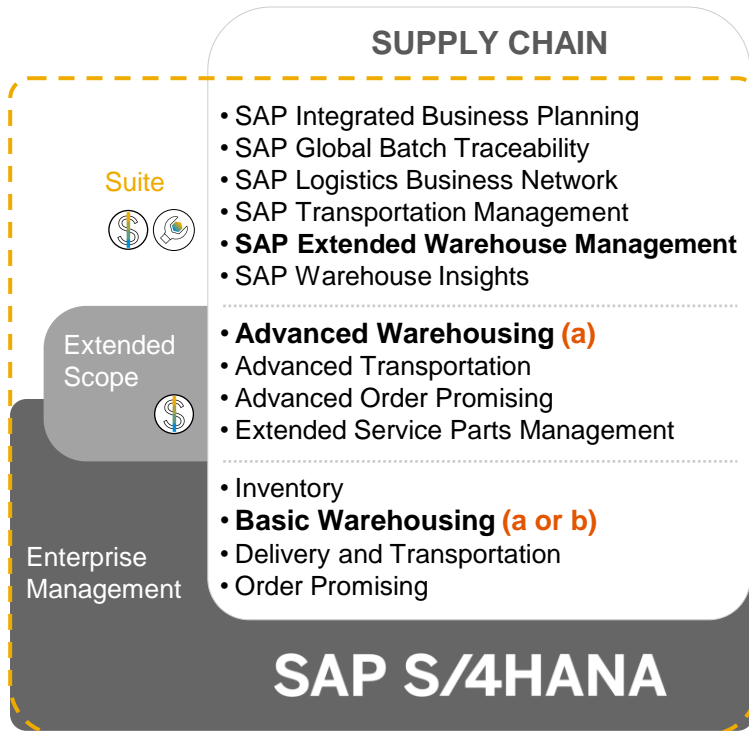

Check posting process ✓
1 min. ago
Physical Inventory Document 0100000652/001 ready to be posted.
Check posting process: difference value based on count entry -75.696,92.
[Close Situation](#)

Situation Handling provides contextual information proactively and offers resolution proposals to optimize the critical steps of the physical inventory process.

Supply Chain Functionality within SAP S/4HANA

Warehouse Management Options

All customers converting to SAP S/4HANA from an existing ECC system with LE-WM, will – initially after conversion – reside on LE-WM as compatibility scope¹. Going forward, warehouse management functionality within SAP S/4HANA is delivered via two options:

- a) Customers **innovating their warehouse processes** follow SAP's strategic direction and will convert to **embedded EWM** with the option to run basic and/or advanced scope (which has license implications).
- b) Customers with no desire to manage or even optimize complex warehouse processes, and who want to **keep their established offering**, can technically stay on LE-WM and use the **stock room management** functionality with certain restrictions²

Both options can also co-exist within one deployment and customers looking for a decentral approach can use SAP S/4HANA EWM standalone for some or all of their warehouses.

¹2269324 - [Compatibility Scope Matrix for SAP S/4HANA on-premise](#)

² Not included are Task & Resource Management (WM-TRM), Warehouse Control Unit interface (WM-LSR), Value Added Service (WM-VAS), Yard Management (WM-YM), Cross-Docking (WM-CD), Wave Management (WM-TFM-CP), and decentral WM (WM-DWM)

Warehouse Management with SAP S/4HANA

Supporting all levels of complexity

SAP S/4HANA Supply Chain

Suite LoB Solutions

-  additional license
-  additional installation

Leverage Decentral SAP S/4HANA EWM for

- High volume warehouses
- Independent operations, versioning, upgrades
- Material Flow System (MFS)

High Volume Fulfillment Center

SAP S/4HANA LoB Apps

-  additional license

Extended Warehouse Management

- Inventory Management Optimization (e.g. Slotting)
- Inbound Process Optimization (e.g. Deconsolidation)
- Outbound Process Optimization (e.g. Waves)
- Labor Management (incl. Processors, Shifts, Time & Attendance, Travel Distance, Standards, Tracking and Monitoring)
- Distribution Equipment
- Material Flow Control
- Yard Management (e.g. TU handling, DAS)
- Value Added Services
- Kitting
- Cross Docking
- Warehouse Billing
- Integrated Load Planning
- Improved Package Builder & Stock Consolidation

Optimize warehouse operations

SAP S/4HANA Enterprise Management

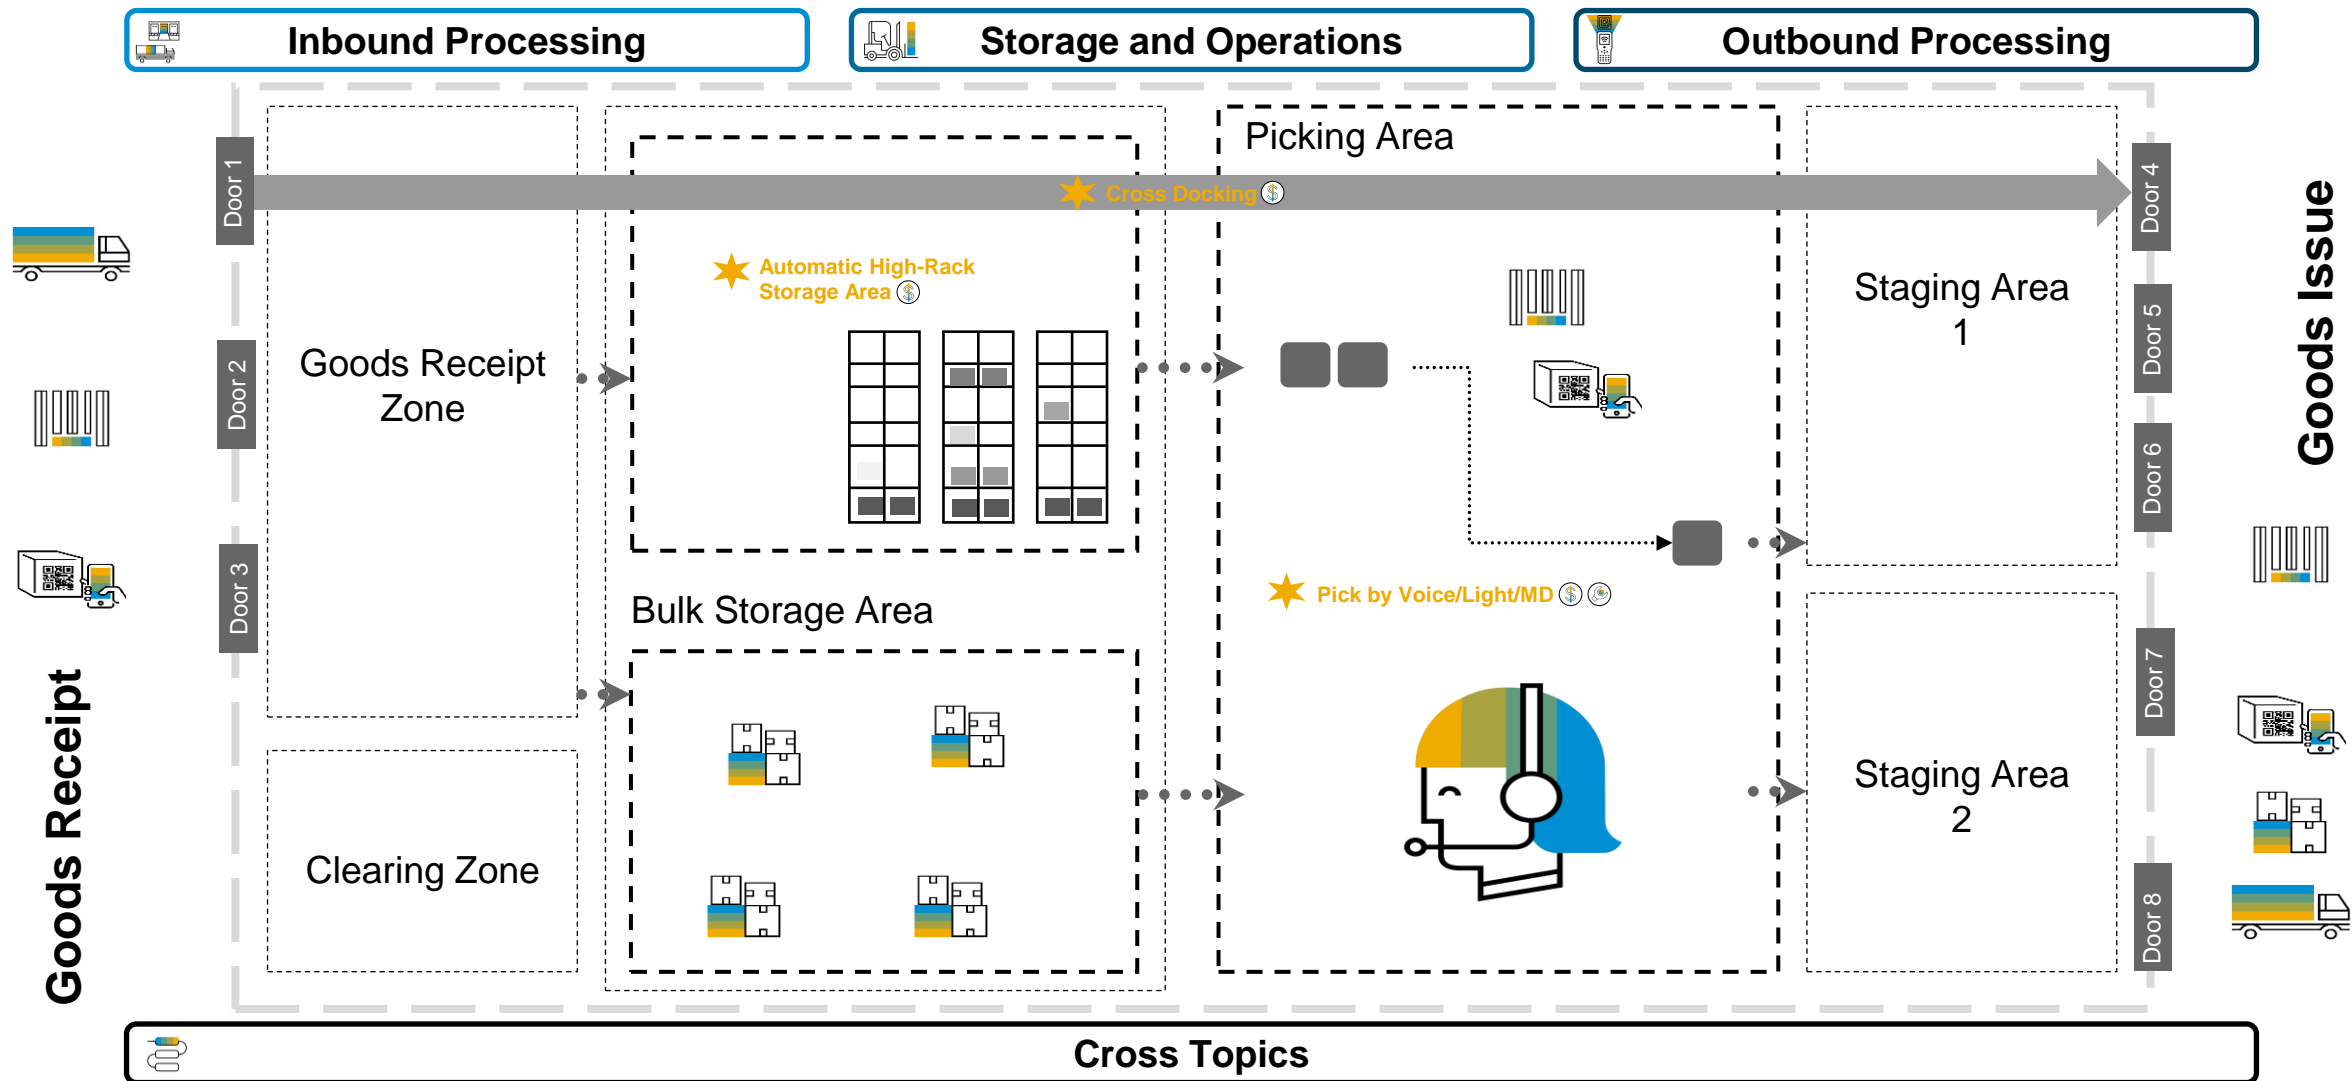

Warehouse Management

- Inventory Management
- Inbound Processing
- Outbound Processing (incl. change of deliveries)
- Internal Warehouse Movements
- Physical Inventory
- Reporting
- Enhanced QM Integration in SAP S/4HANA with EWM
- New Pick-by-Cart FIORI App (Pick small quantities, multiple customers in one run, or into same parcel)

Transparency and control

Extended Warehouse Management within SAP S/4HANA

SAP Extended Warehouse Management – Inbound Processing

Goods Receipt Optimization

- Optimized storage utilization with **slotting functions** calculating the best bin type during putaway.

Transportation Unit Processing

- Streamlined** receipt of products by grouping inbound deliveries by TU/vehicle to process the related activities at the same time.

Goods Receipt Management

- Process **flexibility** through multistep putaway from multiple sources with different scheduling options.
- Inventory **optimization** through putaway strategies.

Inbound Quality Management

- Integration** with quality management covering a broad range of scenarios.

Slotting

Define **slotting criteria** and **slotting steps**

Example: Slotting

Slotting Results

Item	Material	Batch	Quantity	Bin Type	Bin
1	Material 1	Batch 1	10	Bin Type 1	Bin 1
2	Material 2	Batch 2	5	Bin Type 2	Bin 2
3	Material 3	Batch 3	3	Bin Type 3	Bin 3
4	Material 4	Batch 4	2	Bin Type 4	Bin 4
5	Material 5	Batch 5	1	Bin Type 5	Bin 5
6	Material 6	Batch 6	1	Bin Type 6	Bin 6
7	Material 7	Batch 7	1	Bin Type 7	Bin 7
8	Material 8	Batch 8	1	Bin Type 8	Bin 8
9	Material 9	Batch 9	1	Bin Type 9	Bin 9
10	Material 10	Batch 10	1	Bin Type 10	Bin 10

Slotting Results

Perform **slotting** and apply **results** to product master

Warehouse Task Putaway

Warehouse Task Putaway

Leverage **slotting results** in **warehouse task** e.g. putaway

Example: Basic Inbound Processing

Change Inbound Deliveries

Create **inbound delivery** and **warehouse task**

RF Unloading

Unload and **putaway** using **radio frequency (RF)** handheld

RF Putaway

Warehouse Management Monitor

Monitor operation in Warehouse Management Monitor

SAP Extended Warehouse Management – Storage and Operations

Value-Added Services

- Optimized value of time in storage through value-added services like packing or labeling.

Kit-to-Stock Management

- Aligned storage and provisioning of logically related components through creation and management of kits.

Inventory Management

- Full transparency and control down to granularity of storage bins.
- Optimal facility utilization through seamless replenishment and rearrangement of stock.

Physical Inventory

- Compliance and accuracy with system-supported inventory counting according to common approaches.

Example: Kit-to-Stock

RF Picking

Pick materials for kitting

Work Center Kit to Stock

Receive materials at work-center and perform kitting

Work Center Kit to Stock

Pack and post finished kit and trigger putaway

RF Putaway

Run putaway for created kit

Example: Physical Inventory

Count Physical Inventory

Create, activate and print physical inventory document

Counting

Run inventory counting and enter counting results

Difference Analyzer

Post difference between counting results and system

SAP Extended Warehouse Management – Outbound Processing

Goods Issue Optimization

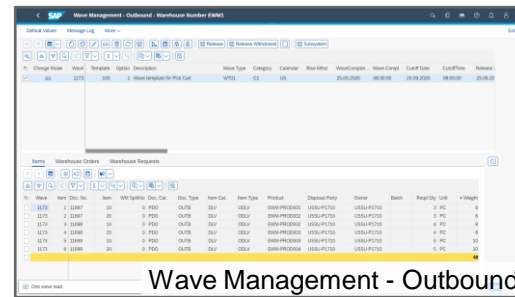

- Streamlined outbound warehouse tasks with wave management including automation options.

Distribution Equipment

- Acceleration of supply through the support of distribution equipment transporting goods in the warehouse.

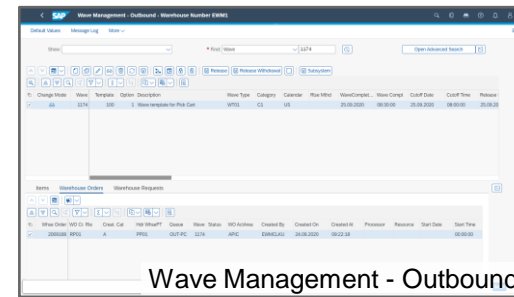

Cartonization Planning

- Planning capabilities for optimal utilization of shipping handling units.

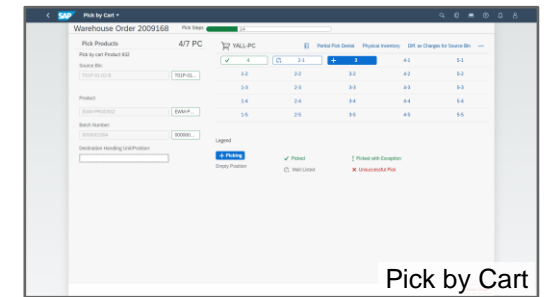

Wave Management - Outbound

Example: Wave Picking

Wave Management - Outbound

Pick by Cart

Summarize outbound deliveries in a wave

Release single warehouse order based on wave

Perform related warehouse tasks in a consolidated way

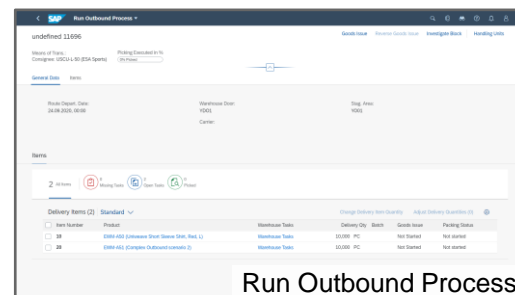

Goods Issue Management

- Efficient picking through stock removal strategies to determine optimal picking bin.
- Flexible goods issue process supporting common scenarios.

Production Integration

- Reliable and flexible supply to production through staging and planning capabilities and coverage of multiple order strategies.

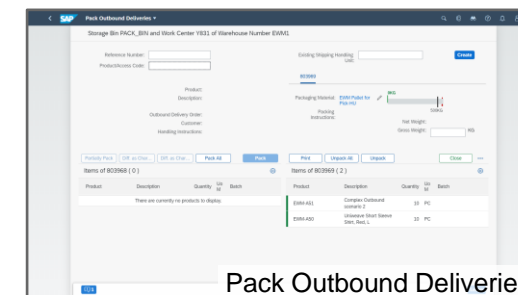

Example: Outbound Processing

Run Outbound Process

RF Picking

Pack Outbound Deliveries

RF Loading

Create warehouse tasks for outbound delivery

Pick according to tasks

Create shipping handling unit and pack picked materials

Stage and load shipping HU

SAP Extended Warehouse Management – Cross Topics

Warehouse Optimization

- Automation (Material Flow Control)
- Resources (Labor Management)
- Throughput (Cross-Docking)

Connected Warehousing

- Trailers/Vehicles (Yard Management)
- Doors (Dock Appointment Scheduling)
- Transport (Integration with SAP TM)
- Billing (Warehouse Billing)
- Cross-Docking (Planned and opportunistic)

Analytics and Steering

- Analytical transparency with CDS views and overview page. **Real-time insight-to-action** with Warehouse Management Monitor.

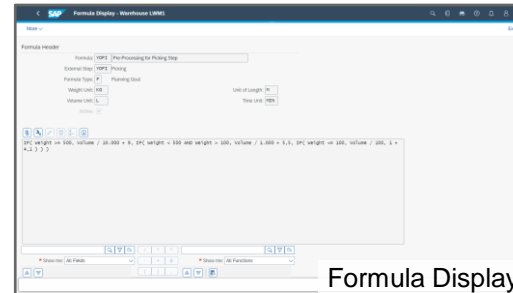

Mobile Devices

- Efficient and transparent fulfillment of warehouse tasks with RF framework.

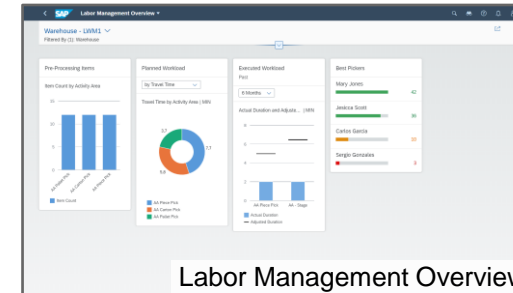

Resource Management

- Controlled distribution of warehouse orders to resources

Example: Labor Management

Calculate workload for warehouse orders based on defined formula

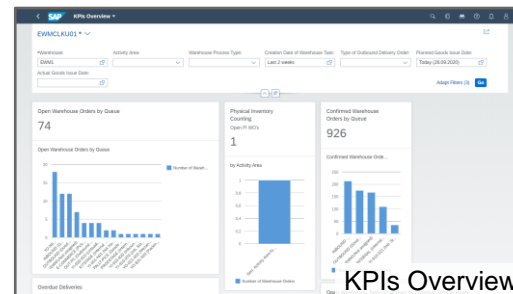

Monitor planning and fulfillment of workload

Executed Workload List

Process Type	Activity Area	Product	Planned Quantity	Actual Quantity	Completion Date
V001 (Picking)	AP-Picker-Pick (P002)	Mary Jones	10,000	9,900	20.09.2020

Out-of-the-box Integration with SAP Warehouse Insights

SAP Warehouse
Insights

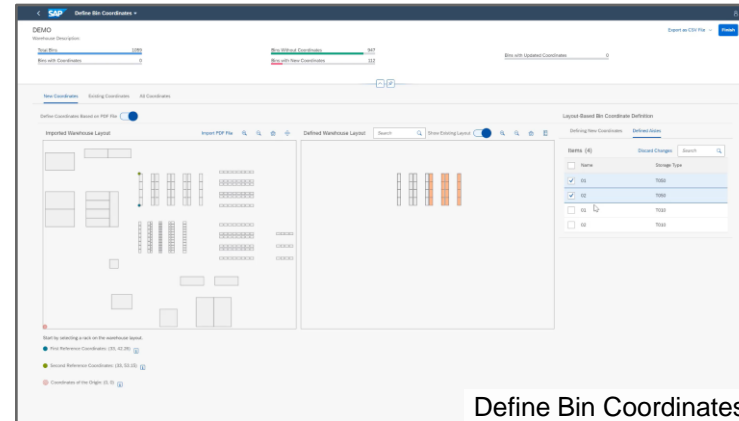

Optimization

Optimize the warehouse operation in real-time

- Optimize open warehouse orders in real-time.
- Consider the Latest Start Date (LSD) of warehouse orders.
- Create new edges by connecting existing nodes.
- Get “best traveling path recommendations” for bin-to-bin and warehouse orders.

Define Bin Coordinates

Integration

Integrate with SAP S/4HANA EWM and SAP EWM

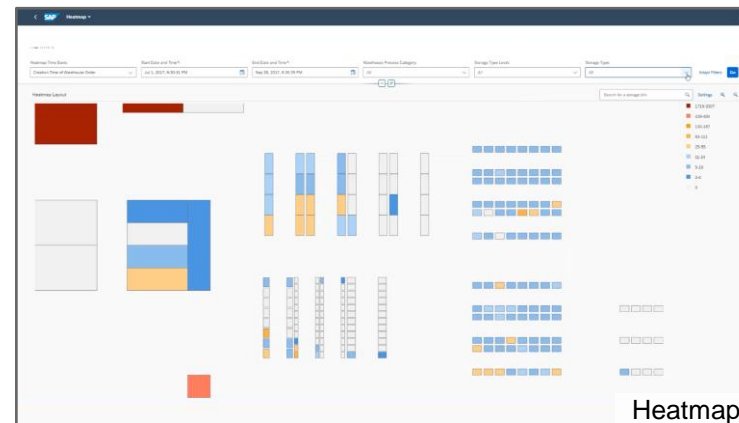

- Out-of-the-box integration w/ SAP S/4HANA EWM & SAP EWM.
 - Fetch open warehouse orders.
 - Export order assignment result.
- Write back optimized warehouse order assignments.

Visualization

Visualize warehouse layout and travel network

- Interactive warehouse layout visualization.
- Path visualization and comparison - before and after optimization.
- Edges details with user-friendly interface.
- Search for a bin and display bin details on one click.
- Use real-time in EWM monitor displaying optimized order assignments.

Heatmap

Analytics

Deliver instant insight to the business:

- Evaluate network completeness.
- Determine network data correctness, checking on inactive edges.
- Optimize the assignment of historical warehouse orders to show how much empty travel can be reduced.
- Check the completeness of warehouse data such as bins and edges, and correct them in the warehouse management system.

Transportation Management with SAP S/4HANA

Supporting all levels of complexity

Suite LoB Solutions

-  additional license
-  additional installation

Leverage Decentral SAP S/4HANA TM for

- Transportation hub approach
- Independent operations, versioning, upgrades

Enhanced Transportation Model through Hub approach

SAP S/4HANA LoB Apps

-  additional license

Advanced Transportation Management

- Strategic Freight Management

 - Descartes

Optimize Transportation Processes

SAP S/4HANA Enterprise Management

Transportation Management

- Main Parts of the Transportation Network
- Freight Agreements
- Charge Management
- Separated Inbound / Outbound Freight Order / Booking Management (Delivery based)
- Basic Transportation Planning (POWLs / manual Freight Unit Selection)
- Transportation Execution without Event Management
- Freight Settlement Management
- Basic Agency Billing
- Direct Tendering for Service Agents (Subcontracting)
- Dangerous Goods Management
- TM Output Management
- TM Analytics

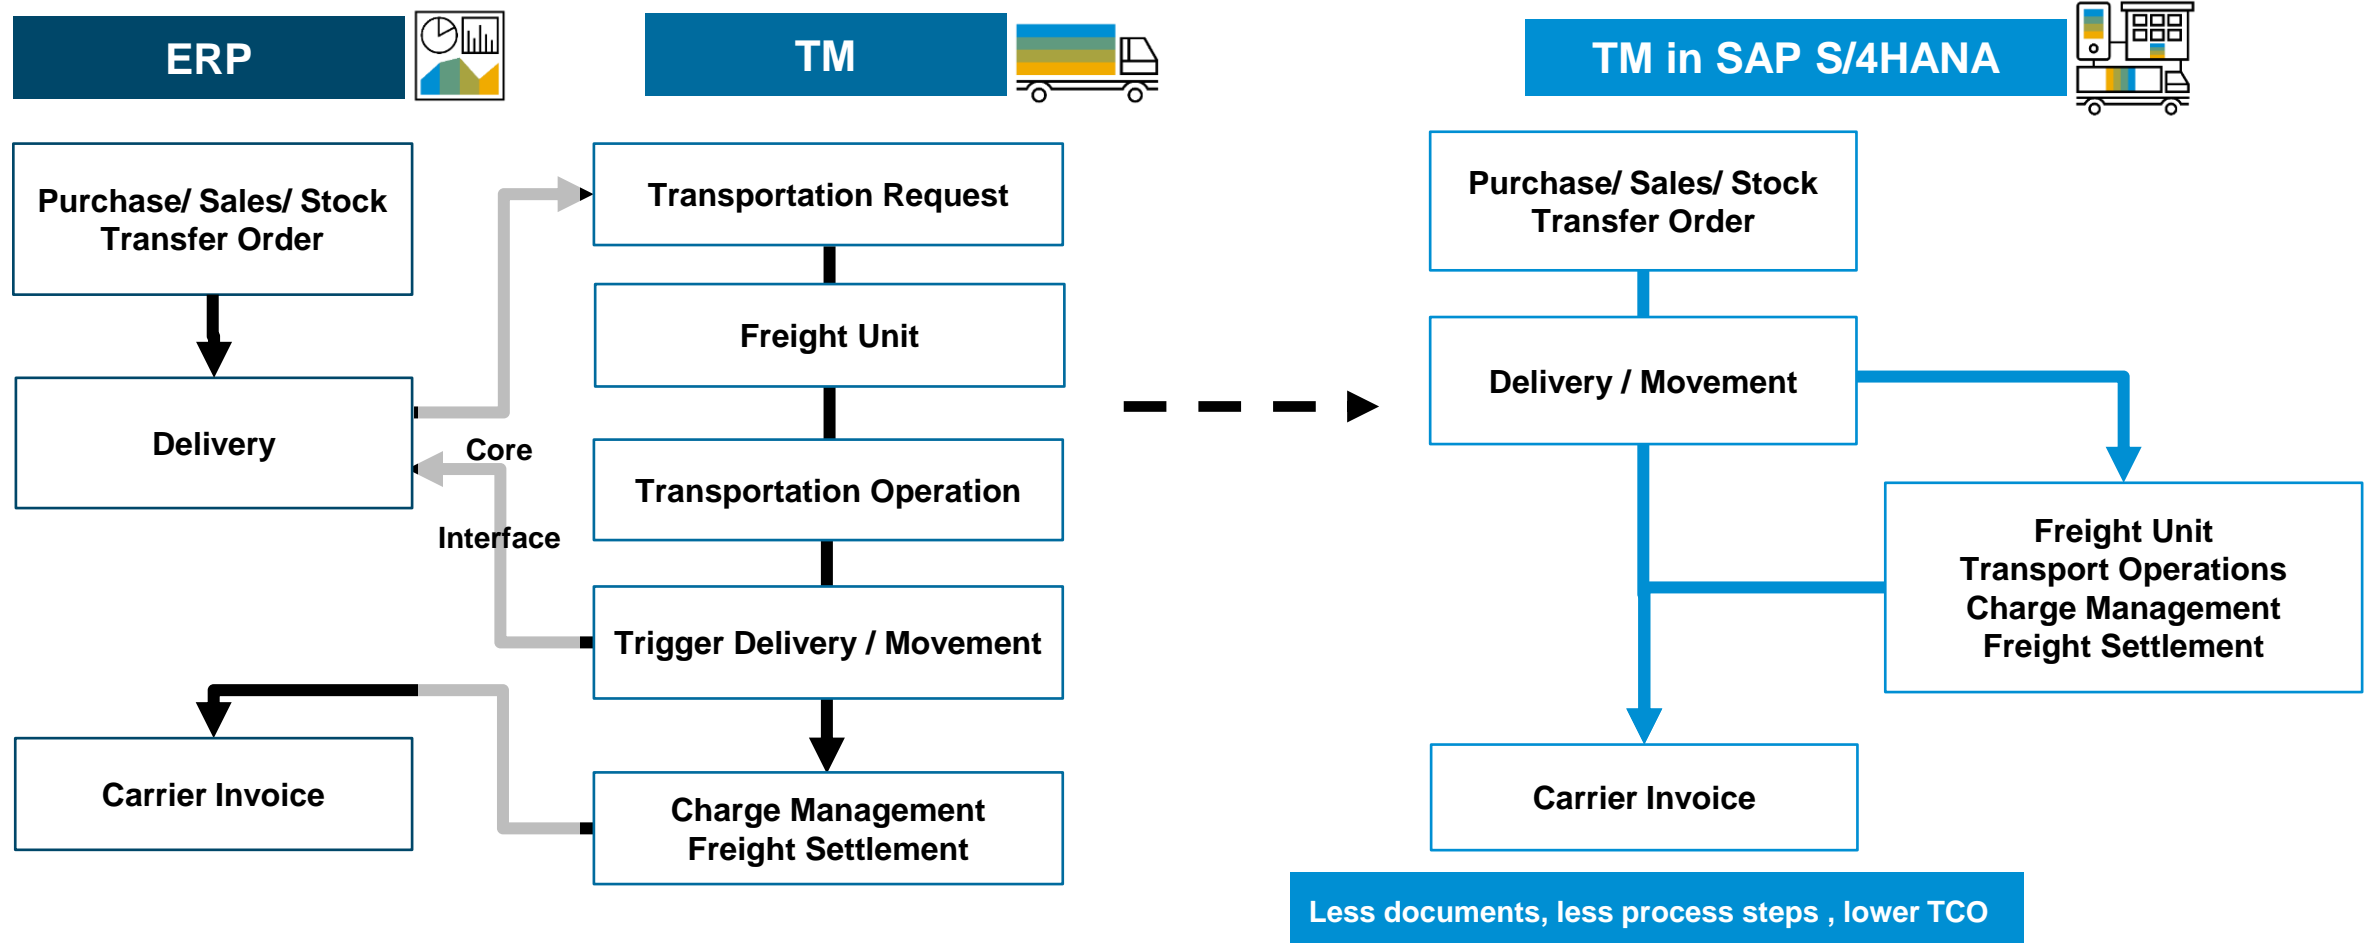

Shipping Transparency and Control

Transportation Management in SAP S/4HANA: 1 System, 1 Transport Flow

With **Transportation Management embedded** in SAP S/4HANA, companies can avoid costly data replication, extensive customization & interface maintenance, multiple UI support and additional hardware.

Customers wanting to leverage SAP TM in a hub scenario can alternatively also use the TM solution *side-by-side*.

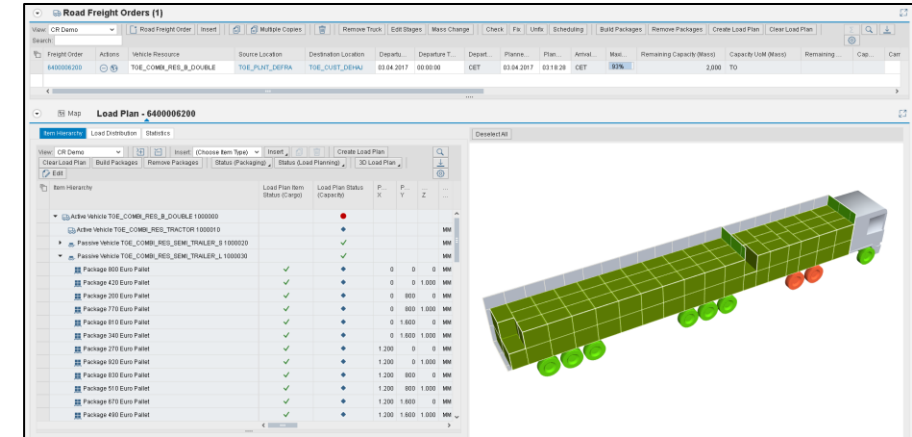

SAP Direct Delivery: Last Mile Delivery

Delivery and
Transportation

CP: Direct Distribution

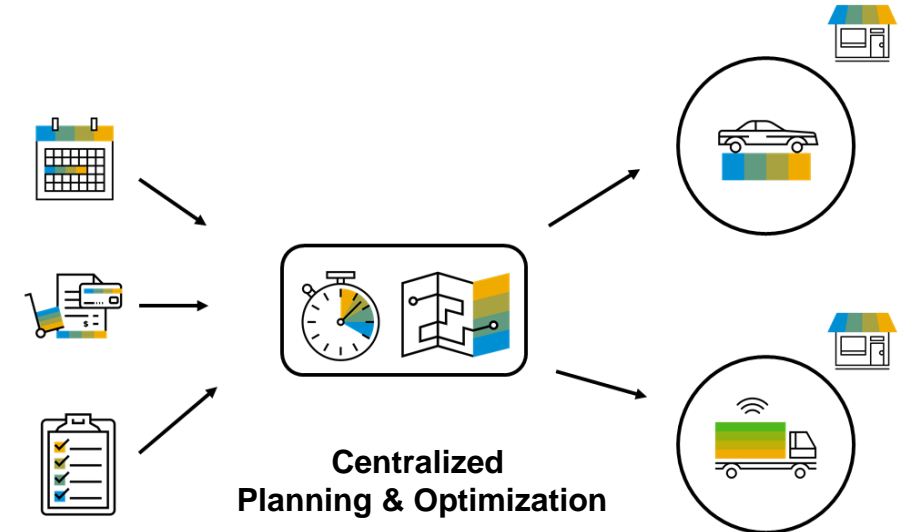

Provides **planning and optimization** capabilities for trucks, routes and the building of packages:

- Considers service activities together with logistics tour planning
- Builds optimal route thanks to tour optimization engine
- Allows for fully flexible tour planning or fixed route planning

First Last Mile Delivery scenario supported:

- **Delivery driver scenario** in which a personal truck fleet is used to deliver pre-ordered goods to stores, vending machines, and other points of sale
- Supports combination resources, specific loading patterns as well as vehicle/combination incompatibility for **e.g. side-versus backloading locations**

Order Promising with SAP S/4HANA

Supporting all levels of complexity

Suite LoB Solutions

-  additional license
-  additional installation

Integrate with Global ATP (SAP SCM)

- Capable to promise and complex algorithms like location & product substitutions, multi-level ATP

Complex ATP Requirements

SAP S/4HANA LoB Apps

-  additional license

Advanced Available to Promise

- Mass enabled fast availability check
- Backorder processing with intuitive requirement classification
- Last minute confirmation changes via Release for Delivery App
- Product allocation check for both sales and capacity constraints
- Intelligent and automated selection of best confirmation considering alternative plants and substitutable materials
- Review Availability Check Results for Sales Orders
- Protect supply for key customers during shortages
- Advanced transportation scheduling (integration SAP TM)^R
- Supply creation-based confirmation (integration with production)^R

Order to Promise Optimization

SAP S/4HANA Enterprise Management

Available to Promise

- Mass enabled fast availability check
- Basic allocation check
- Manual material determination
- Semi-manual plant substitution
- Material-/plant-based backorder processing for sales orders
- Simple transportation and shipment scheduling

Basic Order to Promise

^RThis is the current state of planning and may be changed by SAP at any time without notice.

SAP S/4HANA Advanced Available To Promise Overview (1/2)

Product Availability Check (PAC)

Promise what and when you can deliver accurately in real-time.

- Time phased mass enabled check (parallelization)
- Supply consideration: current and future supply elements
- Demand consideration: sales orders (SO) & stock transport orders (STO)
- Checks on plants, distribution centers, sub-locations and batch level
- Supports Product Allocations (PAL) and Alternative Based Confirmations (ABC)
- Review Availability Check Result App
- oData APIs for Product Availability

[illegible]

Review Availability Check Result

Back Order Processing (BOP)

Order confirmation based on business priorities and changes in the demand or supply situation.

- BOP setup- requirement segmentation and classification Win, Gain, Redistribute, Fill and Lose
- Easy to use 'select option tool' for configuring BOP segments
- Customizable filter and sorter for BOP segments
- Fiori based BOP Results Monitor
- Automated exception handling with BOP fallback variants
- Supports Product Allocations (PAL), Alternative-Based Confirmations(ABC) and Supply Assignment Run

[illegible]

Monitor BOP Run

Product Allocations (PAL)

Prevent single customer from buying the entire available quantity and other requests not being satisfied.

Confirm orders against capacity
constraints.

- Simple and flexible Product Allocation setup and maintenance with time dependent assignment to material / plant
- Hierarchical / sequential allocations (Logical 'OR' for PAL constraints)
- Simultaneous multiple allocation checks (Logical 'AND' between PAL constraints)
- Excel download and upload for mass maintenance
- oDATA APIs for importing / exporting allocation quantities from external systems
- Capacity based Product Allocations
- Easily maintain and extend the characteristic catalogs for PAL

ATP Analytics

Analyze and monitor Product Allocation data to understand the product allocation situation.

After Supply Assignment Run, analyze the Supply and Demand situation to take necessary actions.

In the Product Allocations Overview App.

- Drill down and analyze the product allocation situation for product allocation objects, characteristic value combinations in different periods.
- Drill down into order items and identify all consumed product allocation quantities and the order in which the quantities have been consumed

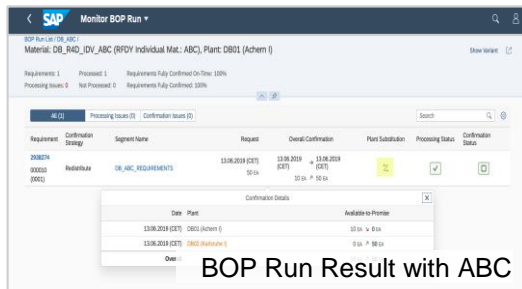

Product Allocation Overview

SAP S/4HANA Advanced Available To Promise Overview (2/2)

Alternative-Based Confirmation (ABC)

Check for all possible alternatives to confirm a requirement when, for example, the availability of the requested material-plant combination is insufficient to confirm the original requirement.

- Trigger during sales order creation and/or Backorder Processing (BOP)
- Dynamic selection of alternative : Best fit vs First fit
- Supports Product Allocations (PAL)
- Multiple alternative determination rules (Max-Earlier Confirmation, Full Confirmation, On-Time Confirmation)
- Supports partial plant substitution
- ABC is only available for Sales Orders

The screenshot shows the 'Monitor BOP Run' interface in SAP. It displays a table with columns for Requirement, Confirmation Strategy, Segment Name, Request, Overall Confirmation, Plant Substitution, Processing Status, and Confirmation Status. A pop-up window titled 'Confirmation Details' is visible, showing a table with columns for Date, Plant, and Availability to Promise. The table lists dates from 13.06.2019 to 13.06.2019 and plants 000001 and 000002, with availability to promise values of 10.00 and 10.00 respectively.

BOP Run Result with ABC

Supply Assignment Run

Ensure an optimal assignment of supply to the open requirements and distribute available supply to the respective sales orders, or stock transport orders.

- Perform Supply Assignment Run for relevant materials in Backorder Processing (BOP).
- Flexibility to consider future supplies within a specified horizon, rules to sort supplies, and option to retain or delete previous assignments.
- Insight to Action tool to evaluate the assignment situation and to enable the user to take manual actions like create/change existing assignments, create outbound deliveries
- In Supply Assignment Overview Apps do flexible and detailed analysis of supply and demand situation for different dimensions and KPIs, in both graphical and tabular formats

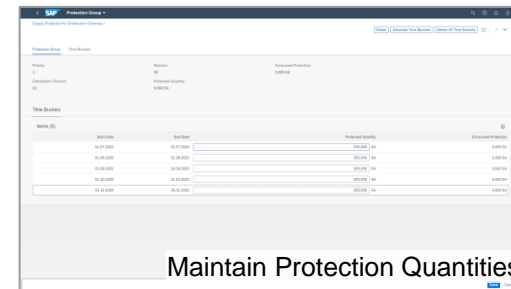

Supply Protection

Helps companies to provide minimum guarantee to priority customers in supply shortage situation.

Protect quantities of a material of a specific plant against other demands.

Supports both horizontal and vertical protection.

- Support horizontal and vertical protection
- Time period enabled

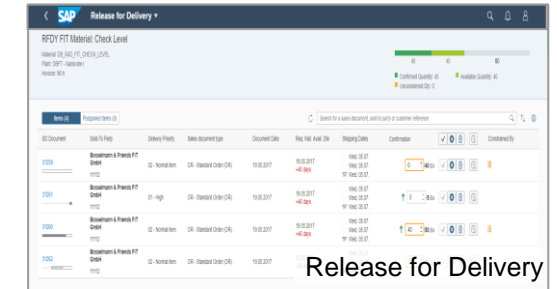

The screenshot shows the 'Maintain Protection Quantities' interface in SAP. It displays a table with columns for Material, Plant, Protection Quantity, and Protection Type. The table lists materials 000001 and 000002, plants 000001 and 000002, and protection quantities of 10.00 and 10.00 respectively.

Maintain Protection Quantities

Interactive ATP - Release For Delivery

Intuitive and informative fast re-planning. Impact analysis while confirming changes.

- Visualize constraints imposed by delivery groups
- Visualize the time zone of the delivering plant
- Fiori based interactive changes to sales order confirms amounts before releasing the orders to delivery
- Impact simulation of current ATP situation
- Direct navigation to Sales Order

The screenshot shows the 'Release for Delivery' interface in SAP. It displays a table with columns for Material, Plant, Release for Delivery, and Release Date. The table lists materials 000001 and 000002, plants 000001 and 000002, and release dates of 13.06.2019 and 13.06.2019 respectively.

Release for Delivery

Extended Service Parts Planning

Extended Service
Parts Planning

Capture & manage demand

Capture and manage demand for **location products** to generate a **demand history**. Load sales order data & stock transfer order data.

Forecasting

React flexibly to demand changes . Determine the best **forecast model** for a location product. Use **stability rules** to prevent too rapid changes to the forecast model.

Inventory Planning

Plan the **optimal stock** of location products. Calculate the **economic order quantity** in combination with the **safety stock** for each location product.

Distribution Requirements Planning (DRP)

Determine the demands of all locations within the **bill of distribution (BOD)**, round & aggregate them along the BOD to the entry location. Create **scheduling agreement releases & purchase requisitions**.

Deployment

Determine the **distribution of goods** within a BOD, and decide how to distribute the goods and, if necessary, initiate this within the BOD.

Inventory Balancing

Balance **excess** and **shortage** at individual locations. Can be scheduled as a **periodical service** or automatically triggered by **events**.

Strategic Planning

Integrated Business Planning

Leverage SAP Best Practices to run planning processes in IBP for sales and operations, IBP for response and supply (time-series based optimizer), IBP for demand, IBP for inventory and Supply Chain Control Tower.

SAP S/4HANA Supply Chain Solution Simplification

- The old ERP-ATP check code is redirected to new table VBBE with faster performance without pre-aggregation. ([SAP Note 2267745](#))
- **New MRP live transaction (MD01N)** for optimized MRP run performance
- **Material Ledger** provides an optimized data model and replaces traditional SAP Inventory Management ([SAP Note 2206980](#))
- **Material number** is extended to **40 characters** ([SAP Note 1696821](#))
- **Warehouse Management** ([SAP Note 2270211](#))
- **Transportation Management for 1709 release** ([SAP Note 2514203](#))
- **MRP functionality** is optimized in Material Master ([SAP Note 2204534](#))
- **MIGO** is replacing multiple MBxx transactions ([SAP Note 2267801](#)) – but individual Fiori exist in addition
- **Simplified logic** for sourcing, subcontracting ([SAP Note 2226333](#) and [2227532](#))
- **Planning file** is optimized for update performance ([SAP Note 2227059](#))
- MRP Planning is consolidated on **storage location level** ([SAP Note 2227579](#))
- **Material Locking** optimizations ([Note 2319579](#))
- Details on **PP/DS** ([Note 2372590](#))
- Best Practice PPDS Migration ([Note 2712349](#))
- Leverage **new Catch Weight Management** ([Note 2358928](#))
- Complete list of simplifications see [here](#)

Achieving Value with SAP S/4HANA Supply Chain

Kolon Group

Industry
Chemicals

With SAP S/4HANA, Kolon Group achieved:

- 4.6x–205x Faster generation of major supply chain transactions and reports
- Up to 145x Fewer period-end closing transaction
- Real-time, mobile viewing of inventory, customer, and order information

A diverse corporation that started in nylon manufacturing, Kolon Group now comprises 19 subsidiaries across many sectors. Since moving from the SAP ERP application to SAP S/4HANA, the group is experiencing enhanced, real-time processing and a better user experience.

[Click here for Kolon Group's source reference](#)

I-D Foods Corporation

Industry
Wholesale

With SAP S/4HANA, I-D Foods Corporation achieved:

- 6x Faster transfer of customer orders to I-D Foods
- 50% Rise in targeted number of stock picks per employee
- Stock optimization that aligns with forecasted demand

I-D Foods is one of Canada's largest imported specialty and natural food companies, with offices and warehouses throughout the country and a national trucking network. So when its legacy ERP system could no longer keep pace, it was time for a digital transformation.
