Stakeholders from the Virginia campus, the George Mason University (GMU) Milton S. Eisenhower Library, and the Office of the Provost and Executive Vice President at the Virginia campus collaborated to develop a new School of Computing (SoC) at GMU. The project, which provides a unique opportunity to bring together the School of Computing, the Libraries, the Office of Information Technology, and the Office of the Provost, is part of a plan to create a new school of computing that will serve the entire university. The project is expected to take about 5 years to complete and will involve significant investments in facilities, equipment, and faculty.
