

Non-linear interlinkages and key objectives amongst the **Paris Agreement** and the **Sustainable Development Goals**

Felix Laumann*, Julius von Kügelgen, Mauricio Barahona

Paris Agreement and SDGs

PARIS2015
UN CLIMATE CHANGE CONFERENCE
COP21·CMP11

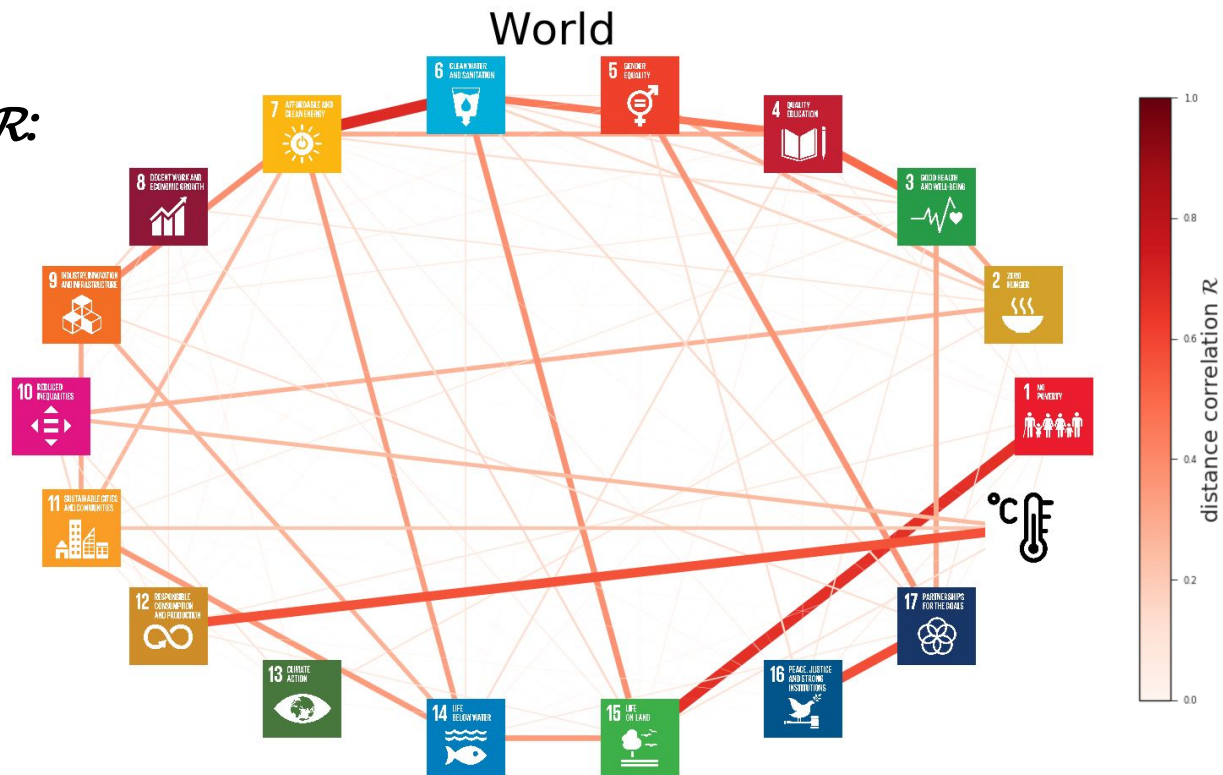

How are these two agendas **inter-linked**?

Partial distance correlation \mathcal{R} :

- Non-parametric measure of dependence
- $0 \leq \mathcal{R} \leq 1$

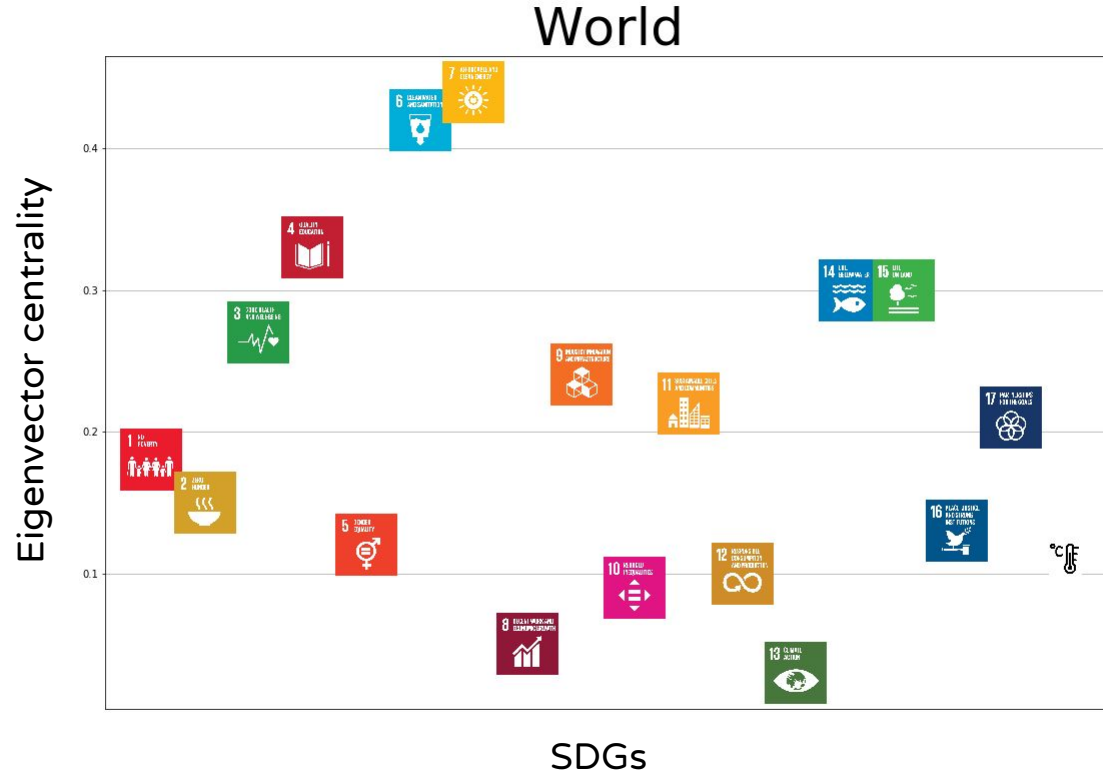

$$\rightarrow \mathcal{G} := (V, E)$$

Which variables are **most central**?

Eigenvector centrality:

- Measures a node's centrality while giving consideration to the centrality of its neighbours
- *Relative* to other nodes in same network

Thank you.
