

Key Benefits

leostream®

Remote Desktop Access Platform

Flexibility

- Integrate and manage multiple infrastructure platforms from a single pane – VMware, RedHat, Nutanix, OpenStack, AWS, Azure, GCP
- Automate and manage the provisioning and power state of VMs through direct API calls

Cost Control

- Be agnostic to infrastructure providers to avoid price increases from market shift
- Utilize Leostream's automated power control & provisioning functionality to limit and optimize cloud consumption. Support persistent or non-persistent workflows

Optimal Performance

- Support high performance workloads with best of breed protocols – NICE DCV, Mechdyne TGX, or HP Anyware
- Support basic office task workflows with free protocols – RDP, VNC, or NoMachine
- Eliminate the need for a VPN with the Leostream Gateway – typically lowers bandwidth consumption 15 – 20%

Zero Trust Security

- Integrate with Identity Management & MFA solutions such as Active Directory, LDAP, SAML, Azure AD, RSA, etc.
- Connection paths are dynamically created, filtered by the client's IP address and a randomly assigned port, ensuring restricted access control and minimizing exposure to unauthorized users.
