Eligibility

- **Address field split for Direct Certification Matching**

We have updated how the full street address is handled for direct certification matching. Previously, it compared the full street address; now, it splits it into individual fields. Street Address, City, State, and Zip. This will help gain a few more points in scenarios where one wrong part of the address was blocking point allocation.

For example, take the address **742 Evergreen Terrace, Springfield, MO**. This entire address had to match between the Student Data and the Direct Certification file for points to be awarded.

But now, if we had **742 Evergreen Terrace, Shelbyville, MO** instead, we'd see points awarded for Street Address and State.

We're hopeful this will assist with more automatic matches in the upcoming school year!
