Inventory

- **Internal Vendor Contract Updates**

  The Contracts section for Internal Vendors has several new features to support more complexity in your operations.

  First, this section now supports the creation of **Seasonal Contracts**. These seasonal contracts are an extension of the main contract, utilizing the same item list, but they allow for different configurations during a specified date range. For example, during the summer, distribution sites may have a modified shipping schedule or more simplified delivery routes. Seasonal Contracts allow for this complexity without disrupting the overall distribution process.

  Furthermore, internal vendor contracts have also been updated with five new **Distribution Settings**. These settings control several important operational details that affect the distribution site as well as the ordering sites. The **Available Quantity** settings determine which values sites will see for the available quantities when ordering from the distribution site, as well as whether they can exceed that quantity. The **Substitution** related settings determine which types of items can be added to distributions. Lastly, the **Allow Orders After Assignment** setting determines when sites are cut off from ordering for a particular distribution day.

  Inventory > Management > (Internal) Vendors > Vendor Detail > Contracts tab

- **Hotshot Distributions**

In addition to the expanded configurations, Distribution also features a new functionality. **Hotshot Distributions** is a new option on the calendar for Distribution site personnel. While traditional distributions are simply used to fulfill quantities derived from site orders, Hotshots enable a completely manual distribution process. When creating a Hotshot, both the sites and items will be manually added by the distribution site. Once the Picking status is reached, the distribution process is identical to regular distributions.

Hotshots are differentiated on the calendar by a special Truck icon. We hope this feature enables and supports the flexibility your operations demand.

Insights

- **Insights Benchmark Configuration Updates**

  Insights users can now streamline benchmark configuration with the following enhancements:

  - Site Type filtering for the sites grid

  - Viewing previous year's actual values next to KPI benchmark values

  - Auto-filling KPI values from previous year's values

  - Bulk updating KPI values incrementally instead of doing one by one

  - Viewing the History of benchmark changes
