

MANGOAPPS COMPLIANCE CLOUD DEPLOYMENT OVERVIEW

APPLICATION SECURITY

- Set minimum length and complexity of passwords
- Auto session expiration
- Automatic virus scan of documents
- One-way hash of passwords and PINS
- Security alerts for unauthorised access
- Data loss prevention policies (new)
- Custom admin roles
- Disallow saving of username / passwords
- Two factor authentication support
- Single Sign-On
- Set custom IP ranges to limit access
- Disable and wipe-out data from mobile and desktop devices
- Require a PIN or FaceID to access MangoApps on mobile devices
- Built-In eDiscovery features (new)

PLATFORM SECURITY

- Data in transit is 256-bit SSL encrypted
- All stored data is AES encrypted
- Fully automated configuration management
- Data retention, system backup and disaster recovery process and policy
- Detailed user and system access logs
- Information access policy
- Regularly scheduled encrypted backups for user data
- Real-time alerts for critical events (e.g., unauthorized modification of critical system files)
- Periodic security vulnerability scans (e.g. Qualys Gard)
- Annual Third-party penetration tests

CLOUD SECURITY

- Exclusively use of AWS Infrastructure Services enabled AWS compliance inheritance for FISMA, FedRAMP etc.
- Monthly OS patches
- Regular security and systems audits
- Automated, zero-downtime, configuration and application upgrades
- Long-term Audit and system log backup
- **Optional single-tenant (dedicated) deployment for even more control security, and choice of AWS cloud**
 - Physical and Logical separation between customer data and systems
