¹ Since Inception (SI). Inception Date: 18th December 2024. ² Benchmark ticker: NDDUWI. The total return performance data displayed in the tables above and charts below are for the ECP Global Growth Fund Class C EUR and are historical, calculated on a net of fees basis, assume the reinvestment of all distributions and do not allow for the effects of tax or inflation. Fund costs are generally paid in the Base Currency and these costs, and so returns generally, may increase or decrease due to currency and exchange rate fluctuations. Total returns for the benchmark do not incur these costs. For periods greater than one year, returns are shown annualised. Past performance is not a reliable indicator of future performance.

Risk & Reward Profile

Typically lower rewards, lower risk Typically higher rewards, higher risk

< 1 2 3 4 5 **6** 7 >

The Risk and Reward Indicator table demonstrates where the Fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. The lowest category does not mean a risk-free investment. The indicator is based on past data, it may change over time and it is not a reliable indication of the future risk profile of the Fund. The shaded area in the table above shows the Fund's ranking on the Risk and Reward Indicator. The Fund's risk level is classified as category 6, indicating a higher than average risk but with the potential for higher reward. The high risk is attributed to the nature of the Fund's investments. The category shown is not guaranteed to remain unchanged and may shift over time. Even the lowest category does not mean a risk-free investment. The Fund may also be exposed to the following risks which are not adequately taken into account by the risk indicator above:

Equity Securities Risk: Equities can lose value rapidly, and typically involve higher market risks than bonds, money market instruments or other debt instruments. Fluctuation in value may occur in response to activities of individual companies, the general market, economic conditions, or changes in currency exchange rates.

Management Risk: The Investment Manager's assessment of market or economic trends, their choice or design of any software models they use, their allocation of assets, or other decisions regarding how the Sub-Fund's assets will be invested cannot be guaranteed to ensure returns on investments.

Political and/or Regulatory Risks: The value of the Fund's assets may be affected by uncertainties such as international political developments, changes in government policies, changes in taxation, restrictions in foreign investment and currency repatriation, currency fluctuations and other developments in the laws and regulations of countries in which investments may be made.

Illiquid or Restricted Securities Risk: The investments of a Sub-Fund may be subject to liquidity constraints, which means that a particular investment may trade infrequently or in small volumes, or that a particular instrument is difficult to buy or sell. Liquid investments, such as those in which a Sub-Fund may invest, may also be subject to periods of disruption in difficult market conditions. As a result, in certain circumstances, the Investment Manager may find it difficult to sell an investment at the latest market price quoted or at a value considered to be fair.

For full details on risk factors for this Fund, please refer to the Prospectus and Supplement.

Commentary

Global equity markets staged a powerful recovery in April, as investors largely looked through lingering Middle East tensions to focus on a resilient first-quarter earnings season. While these uncertainties remain, quarterly earnings confirmed that the ongoing investment wave in artificial intelligence is delivering a multiplier-effect across the global economy.

Amazon delivered a re-acceleration of AWS, securing new semiconductor deals with Meta and Anthropic, validating their investment in developing their first-party custom silicon platform. Similarly, Alphabet delivered earnings showing that Google Cloud is growing faster than its peers and providing evidence that AI-integrated Search is driving higher user engagement.

Key positive contributors to portfolio performance during the month included Raspberry Pi Holdings PLC (RPI), Alphabet (GOOG) and Block Inc (XYZ).

During April, Raspberry Pi Holdings PLC (RPI) continued to rally on the back of their full-year results delivered at the end of March. During April it was announced that ARM Technology Investments increased its shareholding in Raspberry Pi to 13% after purchasing a significant portion of shares during a secondary placing by the Raspberry Pi foundation. This move reinforces the cornerstone relationship between the two businesses, cementing Raspberry Pi's strategic importance to ARM as the route by which developers discover the ARM architecture. Management continues to be focused on ensuring availability of their devices for their industrial customer base at a time when the memory shortage is resulting in competitors unable to meet demand. We see this as a significant opportunity for Raspberry Pi to continue to gain market share.

Alphabet (GOOG) was a positive contributor in April, with the company delivering a very strong 1Q26 result that was met very favorably by the market. GOOG is seeing strong momentum in its core advertising businesses, particularly Search which saw growth accelerate to 19% in the quarter. Search is seeing real-time benefits from the company's AI investments, as new surfaces like AI Mode and AI Overview are driving increased query volumes while model improvements are improving the efficiency with which GOOG can monetize those queries. The Cloud business was also very strong, with revenue growth accelerating to 63% in the quarter and the backlog nearly doubling. GOOG's announcement of third-party TPU sales has helped this backlog growth, and increases confidence in and visibility of the future growth runway.

Key negative contributors to portfolio performance over the month included ServiceNow (NOW), Samsara (IOT) and Salesforce Inc (CRM).

Our software holdings saw a pullback in April, with ServiceNow (NOW), Samsara (IOT), and Salesforce (CRM) each detracting from performance.

ServiceNow (NOW) underperformed in April, after reporting its Q1 results. The company met market expectations for the quarter despite a headwind from delayed deals in the Middle East, however gave disappointing Q2 backlog guidance of c17% growth, indicating a slight deceleration. Investor's remain sceptical on the company's positioning in an agentic enterprise and are waiting for revenue acceleration which the company has flagged for 2H26. Pleasingly NOW upgraded its 2026 AI ACV forecast by 50%, from \$1b to \$1.5b.

Stock in Focus

Taiwan Semiconductor Manufacturing Co. (TSMC) delivered yet another stellar quarterly result, reinforcing its status as the indispensable backbone of the global AI economy. Despite numerous headwinds associated with the continued build-out of manufacturing facilities globally and electricity price hikes in Taiwan, gross margins reached 66%. This outperformance resulted from a continued shift to advanced nodes, 3nm and 5nm technologies now account for over 60% of total revenue. This growth is driven by demand from large technology companies which continue to compete for limited leading-edge capacity, allowing TSMC to raise their wafer prices.

The outlook for the remainder of 2026 is bright. Management upgraded its full-year revenue growth forecast to above 30%, citing an insatiable AI mega-trend that shows no signs of slowing. To meet this demand, TSMC is entering its most aggressive expansion phase in history.

The company has targeted \$52B-\$56B in capex for 2026 driven by the 2nm ramp. The strategic geographic de-risking of the business is gaining momentum. The Arizona site is evolving into a massive hub with a total planned investment now reaching \$165 billion, while the Kumamoto fab in Japan is expected to more than double its output this year. Interestingly, while competitors like Intel make headlines with foundry pivots, TSMC's vertical integration of CoWoS and advanced packaging remains its moat within a moat. As AI models grow in complexity, TSMC is no longer just a chipmaker; it is increasingly a holistic systems provider, a shift that we believe justifies a structural re-rating of the stock toward a premium quality-growth multiple.
