BANISH 12

OWNER'S MANUAL

BANISH Suppressors has always had one overriding goal in mind - to make the most user-friendly suppressor on the market. And what is more user-friendly than being multi-caliber? At BANISH Suppressors, we are proud of what we've accomplished, and we want to share with you what makes a BANISH Suppressor stand out from the crowd.

Our unique WhisperTech™ tube is where the BANISH multi-caliber system starts, with a lightweight titanium alloy tube. BANISH Suppressors are light-weight and tough enough for a lifetime of service. The internal baffles handle the gas in such a way that the suppressor significantly reduces recoil as well as sound.

WARNING

To provide for your safety and the effective use of this silencer, it is important that the owner and any user of the silencer read this entire manual and strictly follow the warnings and instructions within. This silencer should be used only by those who are well-versed in the safe operation of firearms.

Failure to follow installation and maintenance instructions in this manual may result in serious personal injury and damage to the firearm.

Suppressed firearms make less noise than unsuppressed firearms and it is easy to forget that they are still capable of causing bodily injury and property damage. Remember, a suppressed firearm should be treated with the same safety and caution as an unsuppressed firearm. Before installing the silencer, be sure that the firearm is unloaded and the action is opened and visibly clear of any ammunition. If you are at all unsure as to the proper procedures to ensure that your firearm is unloaded, please consult your firearm user's manual/instructions and/or contact a properly licensed dealer or the manufacturer of your firearm.

Firearm silencers are user-attached firearm muzzle devices, and as such are subject to improper attachment issues unless the procedures outlined in this manual are followed precisely.

Check the fit between your barrel and silencer before firing! The thread mount must be fully shouldered on the barrel. For direct thread silencers, there should be no visible gap between the barrel shoulder and the face of the silencer thread mount (crush washer from muzzle brake must be removed).

For quick detach suppressors, the muzzle brake must be seated to the shoulder of the firearm and timed properly using the shim kits provided.

If there is any gap DO NOT fire the host with the silencer attached. Poor accuracy and product damage may result if the silencer is not seated against thread shoulder.

Silencers must be free of obstructions such as mud, dirt, etc. DO NOT attempt to shoot through an obstructed silencer.

The silencer is designed to suppress the initial muzzle blast and subsequent projectile de-corking pressure. The silencer doesn't contact or otherwise interact with the bullet, allowing the projectile to travel at its default speed.

A sonic crack may be produced by the projectile as it breaks the sound barrier. This is solely a function of the projectile breaking the sound barrier and is not related to product performance.

To ensure your silencer remains secure while firing, it is of the utmost importance that you frequently verify the silencer is securely tightened onto the barrel. We recommend checking the security of the attachment after 5 discharges of the firearm and every 30 discharges thereafter.

Before removing the silencer from the host firearm, be sure that the firearm is unloaded, and the action is opened so that it is visibly clear of any ammunition. When removing the silencer, use extreme caution as it may be hot to the touch after firing. Use a Devour™ suppressor cover (sold separately) or gloves to avoid burns or other injuries.

Once the silencer is removed from the host firearm, BANISH recommends using a thread protector or other muzzle device to protect the muzzle threads and crown during storage or transport.

Shotguns are versatile and popular, but they are also extremely loud. A functional shotgun suppressor is a tricky thing to build, but when you've got engineers who thrive on challenges, like the team at BANISH Suppressors does, coming out with a truly game-changing shotgun suppressor is not only a possibility, but an inevitability, too.

Wing shooters will flock to the new BANISH 12, the first shotgun suppressor that was designed for hunting. This 12-gauge shotgun suppressor is made using additive manufacturing processes that keep the weight down to a minimum at just 17.6 ounces. It comes with three fully interchangeable choke tubes with additional chokes available for specific uses. The BANISH 12 uses a mounting system specific to your shotgun's choke tube design, with additional mounts available.

The design of the BANISH 12 means it does not interfere with your natural line of sight down the barrel. This means that the BANISH 12 doesn't interfere with your natural shoulder mount and shooting process, keeping you on the birds and in the hunt – right out of the box. BANISH the noise and bring on the birds.

SPECS

LENGTH: 8.55" | **WIDE:** 3.1" | **TALL:** 2.4" | **WEIGHT:** 17.6oz with Mount & Choke: 14.4oz Suppressor only

MATERIAL: 3D PRINTED TITANIUM | **CALIBER:** 12GA

MOUNT STYLE: Choice of Mount: Benelli Crio, Benelli Mobil, Berretta Optima, Browning Invector Plus, Mossberg, Remington Pro Bore, Remington 870, Browning Invector DS

CALIBER RANGE: #9 SHOT to SLUGS | **COLOR:** Black or FDE | **FINISH:** CERAKOTE

AMMO COMPATINLITY:

Compatible ammunition – All 12 gauge shotshell ammo from #9 shot through #2 shot, BB, BBB, 00 buck and slugs

Non-compatible ammunition – Shotgun shells with non-typical wad types, slugs without wads/rifled slugs, no steel shot when using full chokes

SOUND REDUCTION: 2–3/4" 8 Shot: 134dB, 3" 2 Shot: 138dB

CHOKE OPTIONS: Full, Modified, Cylinder, Improved Cylinder, Improved Modified, and Extra Full

LIFETIME WARRANTY: YES | **NUMBER OF BAFFLES:** 6 | **SELF-SERVICE:** No

INSTALLATION OF SUPPRESSOR

STEP 1 : Insert choke mount into shotgun's barrel.

STEP 2 : Thread and tighten choke mount using the takedown wrench or any choke tool.

STEP 3 : Attach the suppressor to the choke mount.

STEP 4 : Tighten the collar of the choke mount to the suppressor. Use the supplied takedown wrench after hand tightening.

STEP 4 : Align and time the suppressor. Your sight picture should be unobstructed when aiming.

INSTALLATION OF CHOKE

STEP 1 : Select desired choke and insert it into the muzzle end of the suppressor.

STEP 2 : Use a choke tool or the supplied takedown wrench to thread the choke completely into the suppressor.

CLEANING

It is recommended that the suppressor be cleaned every 50 - 100 rounds fired. The use of solid lead or plated lead bullets is not recommended.

To clean, make sure the firearm is unloaded and unscrew to remove from host firearm.

The BANISH 12 is not user serviceable. Due to the use of additive manufacturing, where the entire suppressor is a single fused unit, the internal baffles cannot be removed.

Soak the entire suppressor in a dish soap or solvent solution. Additionally you can seal the muzzle exit hole and fill the silencer with any cleaning solution and let it sit for 24hrs in both scenarios. Any firearm solvent or sonic wash firearm cleaning solution will work. Ensure not to use solutions that will strip the Cerakote® coating from the silencer.

Once clean, allow the silencer to dry. Shoot 10-15 rounds through the silencer. The high pressure will shoot out any loose debris and buildup that was loosened during cleaning.

BANISH

LIFETIME WARRANTY

We provide a lifetime warranty against all manufacturing defects and damages caused by the normal use of our products. We will repair or replace free of charge any suppressor manufactured by, or at the direction of, BANISH Suppressors. The product is sold “as is” with no further implied contractual rights or warranties beyond those expressly stated herein.

The lifetime warranty does not apply to certain conditions or acts. It is at the sole discretion and determination of BANISH Suppressors if a defect or condition is covered by this warranty. Conditions not covered include, but are not limited to: modifications, abuse, neglect, use of defective ammunition, use of improperly sized ammunition, and criminal conduct. BANISH Suppressors assumes no liability for damages or bodily injury caused by such acts or omissions as previously described. Abuse and neglect are defined as usage outside of the reasonable scope for which the product is intended, thus contributing to the accelerated and unreasonable premature wear of the suppressor itself.

If a repair is required, the owner must contact our Customer Service Department. Our customer service representative will arrange for return of the suppressor at manufacturer's shipping expense. PLEASE DO NOT SHIP THE SUPPRESSOR FOR REPAIR WITHOUT FIRST CONTACTING CUSTOMER SERVICE AND DO NOT SHIP IN ANY EVENT WITHOUT A COPY OF THE APPROVED BATFE FORM.

When you ship the suppressor back to the manufacturer, please include a detailed statement concerning the type of defect or malfunction encountered, describe the ammunition used and type of host weapon the product was used on or attached to.

If for any reason your suppressor is not eligible for repair or replacement, you may purchase a replacement suppressor for 50% off the MSRP for a same or similar suppressor.

Please contact our Customer Service Department at 888-781-8778 for further details and requirements.

RETURN SHIPPING

The cost of shipping for any items returned to Silencer Central is the responsibility of the customer, with the exception of warranty claim returns. Return shipping to Silencer Central for warranty claims and/or repairs are covered by Silencer Central as long as Customer Service is contacted in advance and a warranty claim form is completed by the customer.
