

Content Referencing Made Easy

Body:

Arvind Naik is the Engineering Lead at Vialto Partners, a company specializing in tax, immigration, payroll, and social security technology services for enterprise organizations.

Challenge

In the professional services sector, knowing your documents well and knowing how to locate information within them are paramount. One barrier to Vialto Partners' efficiency was having to manually search multiple systems and documents to extract critical information. It was time-consuming and prone to errors. This, paired with the poor integration of reference tools across applications, created a bottleneck in their document processing workflow.

Solution

To address these challenges, Vialto Partners turned to the document processing libraries offered by Syncfusion®. With those libraries, Arvind's team built an application that enabled immediate data referencing. His users could preview and locate relevant information without opening each document individually. And with Syncfusion, he had a comprehensive suite that could be implemented across multiple tools, meaning he didn't have to rely on multiple vendors for the functionality he wanted.

Result

- Accessing and referencing document data instantly.
- A single, cohesive platform replacing multiple tools.
- Reduced dependencies, leading to quicker development.
- Strong technical support throughout implementation.

Pull Quote

"We definitely wanted Syncfusion to help us with our document processing functionality, and we were happy with and satisfied with Syncfusion."—

—Arvind Naik, Engineering Lead, Vialto Partners
