# Syncfusion®

## Better Performance and Customization

### Body:
Jayesh is a Technical Team Lead at Capita with 15 years of experience.

### Challenge
Jayesh's team had a grid control, but it wasn't handling the amount of data they needed it to, and it wasn't as customizable as they wanted. Something new was called for, but Jayesh didn't want to be forced to build the new control in-house. He needed a plug-and-play solution.

### Solution
Syncfusion®was already well-known to Jayesh as a company that built excellent products. He explored the Syncfusion offerings and discovered the controls to be highly customizable, possessing everything he wanted in a control collection with the level of performance he hoped for.
He saw Syncfusion as the easy answer to his dilemma, not just for his grid, but for many other controls as well.

### Result
- Easily customizable controls with templates.
- Quick control familiarity and debugging.
- Better performance.

### Pull Quote
"I will surely recommend Syncfusion to others as a third-party control because I think it's very easily customizable."
