

Rapid Project Turnaround is Possible with Syncfusion®

Ameet Phadnis, founder and CEO of [Wyngate Solutions](#), has more than 25 years of experience in software development, two decades of which he's spent specializing in the legal industry. He and the team at Wyngate Solutions deliver tech solutions to legal firms, financial institutions, and professional services companies, with a particular focus on automation, cloud-based services, and AI integration.

Challenges

In the legal business, cases require a lot of documentation—from intake forms to case chronologies. Ameet and his team saw the variety of needs of law firms and decided to make a one-stop shop for handling legal matters efficiently.

The tool needed a consistent user interface that didn't require a lot of manual, tedious coding, but other component libraries just didn't offer what they needed. Open-source component libraries like Bootstrap and Material were great for getting started, but they required a lot of custom code to maintain consistency.

Wyngate needed another option. Ameet had trialed Syncfusion components at a previous job, so he thought to give Essential Studio® a try for his own venture. And since Wyngate was initially a small shop with a lean team, Ameet got to kick off with the Community License.

Solution

Wyngate Solutions created a matter management application for law firms that uses Syncfusion components to streamline the display of critical information. By using Essential Studio components like the React PDF Viewer and DataGrid, Ameet built integral functionality into the team's application. The PDF Viewer displays data alongside case intake documents to allow paralegals to review AI-captured data and verify its accuracy. Word components generate chronological case information directly from the app database, allowing legal firms to export documents with ease.

Ameet credits Essential Studio components to his team's ability to turn requests around quickly. "Sometimes you'll get a small project," he says, "or a client might say, 'hey, this would be a good feature to add.' And I can tell you this: This feature was a huge one to add, but our developers got it done in three days, and it was primarily because we're using Syncfusion components."

Another feature the team at Wyngate Solutions loves is the extensibility of Syncfusion products. “Because of your component extensibility,” Ameet says, “our developers are writing our own component libraries and extending your components. We’re able to reduce our time for coding now.” Now, the team can cut manual coding efforts dramatically to push their solutions to greater limits.

Results

As Wyngate Solutions grew, it switched over to the Essential Studio Enterprise Edition, and now the team is using Syncfusion components on a regular basis. Ameet frequently recommends Syncfusion to clients and other consulting companies, citing ease of use, rapid development capability, and component extensibility.

Pull Quote

“This feature was a huge one to add, but our developers got it done in three days, and it was primarily because we’re using Syncfusion components.”

—Ameet Phadnis, Founder and CEO of Wyngate Solutions
