Syncfusion®

AMMCOMPUTER Speeds Web UI Development with Syncfusion Essential Studio®

Faster UI development

Enabled Excel export and future RPA expansion

Delivered a modern, user-friendly interface

Saved time with simple controls and clear documentation.

Introduction

Founded in 2009, AMMCOMPUTER is an Italy-based IT consulting firm led by CEO and software developer Massimo Magris. The company specializes in building modern software solutions tailored to business needs, including integrations with ERP and CAD environments. When tasked with delivering a next-generation web interface with desktop-like functionality, Massimo turned to Syncfusion to accelerate development while maintaining professional quality.

Problem Summary

Before adopting Syncfusion, Massimo relied on standard controls for desktop apps and custom-written web app controls. This approach was limited because he needed a desktop-like UI via the web and building custom controls from scratch was outside the budget.

> *"It's a really cool and good solution with great support. I love it!"*

Challenges

❌ Buildlogic's system needed to support multiple document formats and complex file-handling workflows.

❌ Needed a dependable, off-the-shelf component capable of integrating tightly with existing systems.

❌ Construction project management requires seamless collaboration among numerous stakeholders.

Solutions

✓ Selected the Syncfusion Document Processing Libraries supporting PDF, Word, Excel, and PowerPoint.

✓ Valued user-friendly APIs, easy integration with ASP.NET and Blazor, and cross-platform support.

✓ Reduce context switching for users by enabling document interaction directly inside the platform.

Use Case

Massimo needed to build a modern web UI capable of displaying and interacting with data from multiple enterprise systems, including ERP, Mechanical CAD.

Implementation

Syncfusion's controls enabled Massimo to rapidly build UI components that replicate desktop-like behavior in a web environment, prebuilt controls reduced development time allowing him to focus on business rules and system integrations, and documentation and examples made onboarding simple enabling quick productivity.

Results

- Achieved a professional, desktop like user interface delivered entirely via the web
- Streamlined development by avoiding custom control creation
- Improved user experience through simplified UI interactions and modern design
- Freed up development time to focus on core business logic and customer requested integrations.

Future Plan

Massimo sees promising opportunities in using Syncfusion's spreadsheet control, especially for expanding RPA (robotic process automation) functionality.

Conclusion

Using Syncfusion Essential Studio for ASP.NET Core and JavaScript, Massimo was able to rapidly deliver a modern, feature-rich web application with a desktop-like UI, integrated with multiple enterprise systems. Syncfusion's comprehensive components, Excel export capabilities, and well-designed documentation significantly accelerated development, improved user experience, and enabled more focus on strategic business and integration tasks.
