

Cloud-Based App Made Easy

Introduction

Cloud development demands clean code and fast deployment. Andrzej Placzowski, owner and lead developer at Anpicom, had relied on familiar tools to build his application.

Challenges

Before Andrzej Placzowski at ANPICOM started using Essential Studio® for Blazor to build a data storage and analytics solution in the cloud, he had primarily been working with pure C# and Visual Studio.

Solution

Andrzej needed a straight solution for creating a cloud app for data storage and analysis, but programming one was a bit of a problem.

Impact

What Andrzej valued most, and what he hadn't been receiving, was support. Thanks to SynCFusion's exhaustive collection of samples, Andrzej felt better supported and gained the confidence needed to build an outstanding cloud-based app.

Benefits

- Easy to integrate.
- Prebuilt, customizable themes.
- Scalable components.
- Trusted support team.
- Wide selection of prebuilt tools and controls.

Best quote:

"SynCFusion provides solutions that are effective and easy to implement."—Andrzej, programmer at ANPICOM
