

Build Your Dream App as a Non-Professional Developer

Challenges

Grant Symon is retired and has been developing a notes app in his free time using FileMaker Pro. He reached a hurdle when he discovered that FileMaker Pro does not support built-in rich text fields. As a nonprofessional developer with a distinct vision for his project, Grant needed a user-friendly tool that could be integrated with FileMaker Pro.

Solution

Grant used Syncfusion® Essential Studio® JavaScript components to aid in the development of his notes app. He was thrilled by the component's ease of use and the support team's can-do attitude, which helped his ideas come to fruition.

"As a nonprofessional developer, I would struggle to achieve what I want in my app, but Syncfusion incorporates an absolutely amazing support team. They are generally very quick to respond and eager to help," he said. "They have provided workarounds for aspects that weren't included in the Rich Text Editor—but increasingly are—and helped me to get them working as I wanted."

"Having access to this is just amazing for me."
