Syncfusion®

Building a Proof of Concept on WinForms with Syncfusion®

Challenge

Building a PoC application based on the existing configuration of a complex Excel spreadsheet is hard enough on its own, but when the existing application is complex and nonintuitive, matters are made worse.

That's why David Harrison, a senior test automation engineer, turned to Essential Studio® for Windows Forms when he was tasked with building such a PoC.

Solution

He wanted to showcase test automation within the PoC, so he was looking specifically for a modern control library for WinForms. Syncfusion offered a modern one that could be used as a configuration tool.

Result

Before using Syncfusion, David's challenge was moving away from Excel as a platform. He discovered that getting started with Syncfusion was straightforward due to its integration within Visual Studio projects.

Benefits

- User-friendly UI
- Easy to integrate
- Comprehensive and feature-rich UI framework

Pull Quote

"This control library is very much worth a try!"

—David Harrison, Senior Test Automation Engineer
