Syncfusion®

A Diagramming Solution
Like No Other

With more than 30 years of experience, Bert O'Neill is a developer who is well-versed in design and architectural patterns and has extensive experience leading teams and collaborating with product owners.

Challenges

Before Bert started using Syncfusion®, he used a mix of commercial and noncommercial tools to build applications; however, within those tools, he couldn't find a user-friendly diagram like the one in SQL Server Management Studio (SSMS). So, his search for a diagramming solution began.

Solution

In Syncfusion, Bert found a diagram control unlike any other on the market. With it, he created several Visual Studio and SSMS extensions that reduce the laborious nature of certain actions performed by developers and database administrators.

And thanks to Syncfusion's blogs, videos, and support, integrating those tools into his application was extremely easy.

Results

• User-friendly UIs.
• Access to a comprehensive, rich UI framework.
• Easy integration.

Pull Quote:

"Use the trial version, and if you're happy, purchase the full version. Their support is excellent—actually outstanding!"

— Bert O'Neill, Software Contract Developer
