

Precise Components in a Precision -Focused Industry

Body:

Elle Jeries is a senior software engineer at Fives DyAG, where she and her team provide software solutions to businesses in the manufacturing, environmental, technological, and economic industries worldwide.

Challenge

In manufacturing and industrial engineering, precision is key. Elle found that precision with other component libraries and software solutions was lacking—they weren't customizable enough and didn't have enough variety for the manufacturing plant webpage she was crafting. The pre-built components just weren't available elsewhere, so Elle turned to look for alternatives.

Solution

Syncfusion Essential Studio provided a comprehensive library of tools for Elle's needs. By taking advantage of pre-built controls for ASP.NET Web Forms and JavaScript, she was able to hone the site she was working on into shape.

"Documentation made getting started very straightforward."

—Elle Jeries, Senior Software Engineer at Fives DyAG

Result

With Syncfusion controls, Elle was able to customize her websites to make them perfectly suited to her clients in the manufacturing sector. Syncfusion's wide selection of pre-built tools allows her to continue tailoring solutions to each client's needs.
