

Empowering Job Seekers Through AI Help

Cost-effective document processing toolkits

Programmatic document processing options

Document tools

Introduction

sAlmon Software is a software development and consulting business that offers a time-saving AI service for job seekers—a cover-letter generator that creates personalized, professional letters for job applications. It allows users to apply to more jobs through cover letters created in the built-in editing and formatting tool.

Problem Summary

sAlmon Software President Simon Kaltgrad knew when he began making an AI tool for job seekers that he needed a lightweight, cost-effective document editor to create functionality for a cover-letter generator. He needed two key functions for the tool: a document editor and a PDF generator. “A lot of editors just let you edit,” Simon said.

He was looking for a WYSIWYG editor that made document creation easy. So, he went looking through a few options until he came upon SynCFusion. “I’ve tried all different kinds of methods to get it to go from what you’re editing to a physical printout or a PDF and SynCFusion gets the closest that I’ve found,” he said.

“I recommend it, especially to smaller teams. It’s very helpful and simple to use. The parameters are plentiful for what you want to accomplish.”

Simon Kaltgrad , President and Senior Software Engineer

Use Case

Simon uses the Document SDK and the PDF Viewer SDK in his AI cover-letter generator, providing users with formatting and text editing options to create cover letter documents that can then be exported as PDFs.

BEFORE SYNCFUSION

Challenges

- ❌ Expensive document editors that don't provide all the functionality needed.
- ❌ Complex, heavy back-end options that are more work than they're worth.

AFTER SYNCFUSION

Solutions

- ✅ An all-in-one document editing solution at a reasonable price.
- ✅ A lightweight document editor that doesn't overcomplicate things.

Results

- Less reaching out to support for answers.
- A blazing-fast cover-letter creator that handles documents easily.
- A single vendor for multiple solutions.

Future Plans

Simon looks forward to testing out some other Syncfusion solutions like Blazor AI features and other automation upgrades. "There are a lot of neat tools that I would like to look at for future projects," he said.

Conclusion

Simon used Syncfusion tools to build a tool for others—one that builds personalized cover letters from scratch with the help of AI. As a smaller team, sAlmon Software is able to use a cost-effective option to build mighty products for its users.
