Syncfusion®

From .NET Printing to Advanced PDF Generation with Syncfusion

Challenges

Riccardo Chiesa owns a small company called Terabyte. But with only a couple of assistants, he isn't just the owner; he's also the company's software developer. While implementing a PDF feature in Windows Forms using the platform's basic printing function, he discovered that what he needed was a PDF implementation without a printing system.

Solution

Using the Syncfusion AI assistant, he explained to it what he wanted from Syncfusion's PDF libraries, and it generated it. Everything complied correctly. Now he uses Syncfusion's PDF solution in his app to generate PDFs.

His customers no longer have to click Print and check their printer. Now they print with one click. He also began using Syncfusion's libraries to create Word and Excel documents.

He plans to utilize Syncfusion for other projects, including charts and various forms of data visualization.

"We recommend [Syncfusion] because it's a solid system."

—Riccardo Chiesa, Owner, Developer, Terabyte.
