

Prebuilt Controls Save Valuable Time

Background

[TimePunch](#) is a time-tracking system catering to companies large and small. Its automated time and attendance management system has an intuitive UI, multiple data entry options, and extensive features. Before Syncfusion®, TimePunch developed most of its tools itself.

Challenge

TimePunch needed many complex UI controls for the time-tracking tool they were building, such as a scheduler and a pivot grid. Their existing solution did not have all they needed.

Solution

TimePunch decided to use the WPF tools built by [Syncfusion](#). The Syncfusion tools offered user-friendly UI, easy navigation, and the ability to deploy on mobile, web, and desktop, which was a big motivator for the TimePunch team. Thanks to existing samples, implementing Syncfusion controls into their app was no problem.

Impact

By using Syncfusion controls, TimePunch was able to “add the required functionality in a fraction of the time compared to developing the controls” itself, says CEO Gerhard Stephan. This is especially true for the scheduler and pivot grid, which helped them greatly.

Pull Quote

“Using Syncfusion WPF controls, we were able to add the required functionality in a fraction of the time.”

—Gerhard Stephan, CEO, TimePunch KG
