

Polished Applications With with Elegant, Prebuilt UI Components

In software development, timing can be everything. When you have clients that who require quick turnaround times, you need partners who can help you cross the finish line on each of your projects. Senior Solutions Architect Hassan Rahman found that his previous partners didn't offer the budget-friendly options that his company, Vertex Bytes, needed.

Challenge

In the process of developing real-time dashboards using React components, Hassan realized that designing the UI for real-time React dashboards himself would take up too much time. When he wanted the core functionality to be implemented quickly, so he realized decided that he and the Vertex Bytes team needed something different.

Solution

Hassan made the switch from Telerik and DevExpress to Syncfusion®. With pre-built themes and a trustworthy support team, many of the difficulties Vertex Bytes faced with previous suppliers fell away. One huge bonus for the team? Since Vertex Bytes is a small developer, it was able to take advantage of the Syncfusion Community License. Hasan and his team could use Essential Studio's vast component library for free.

"Syncfusion has elegant UI designs, good documentation, and prompt technical support, which makes working with them a pleasant experience,," Hassan said."

One huge bonus for the team? Since Vertex Bytes is a small company, it was able to take advantage of the Syncfusion Community License. Hasan and his team could use the vast Essential Studio® component library for free.

Impact

Now that Hassan's found Syncfusion, he can save time by using prebuilt components that still meet his design standards. Syncfusion controls like the Syntax Editor in Windows Forms, the Gantt Chart in Angular, and various React components give Hassan's work a polished, professional look with little effort. And he knows he's always got a support staff ready to help if he has questions.

Pull Quote:

"Syncfusion has the best free SDKs for Angular, React, and Windows Forms for small dev teams." – **Hassan Rahman**
