

## XPDTR Auto-fills with Syncfusion® PDF Viewer

### Body:

When Hossam Amin took over ownership of PermitPro—now XPDTR—in 2023, he saw an opportunity to capitalize on software designed to streamline the construction and real estate permitting process. Widely used by architects and expeditors, XPDTR enables firms to submit permit applications and track projects online, be it from a laptop or a phone

### Challenges

Hossam needed to build an application that automatically fills in PDF forms with predefined data. Such a feature would be essential for improving the processing of construction and real estate paperwork.

### Solution

With the React PDF Viewer by Syncfusion®, Hossam can now automatically fill out PDF forms with data from contact records and jobs defined within XPDTR.

### Results

- A control with cross-platform compatibility.
- Easy integration with existing app.
- Access to helpful support.

### Pull Quote:

“Highly recommended.”

—Hossam Amin, Director, XPDTR
