

## Breeze through Web Development with Essential Studio's Blazor Components

### Introduction

For more than 85 years, Köster GmbH, a family-owned construction company, has safely and economically made clients' idealized properties a reality. From office and administration facilities to commercial and residential buildings, Köster GmbH provides innovative and sustainable solutions for its clients' construction aspirations.

### Challenges

Martin Pfeiffer, a Senior Application Developer at Köster GmbH, wanted a Blazor components library that could speed up his team's development cycle. They tried using DevExpress but found that some of the components were lacking in functionality. "We struggled with the grid components," he said. Martin and his team needed an extensive range of user-friendly components to choose from, so they turned to Essential Studio®.

### Solution

With Essential Studio's Blazor components library, Martin and his team were able to quickly develop several Köster GmbH construction apps. When asked which features motivated Martin to try our library, he said he was drawn to its flexible themes, extensive pre-built tools and controls, and ability to be easily integrated.

With 145+ lightweight components—compatible with both server-side and client-side Blazor frameworks—developers can design web apps tailored to their company's needs faster than ever. If your team is struggling to meet a tight deadline, or just wants additional support, Syncfusion's toolkit will give you the boost you need to expedite your development process.

"It's very usable and will speed up your development!"

— Martin Pfeiffer
