Syncfusion®

Mavdero Accelerates Board Resolution Workflow with Syncfusion DOCX Editor SDK

2–3 full-time engineers' weeks of effort eliminated, reducing risk of client dissatisfaction.

Instant scalability for rapid growth without delay

Immediate resolution using a ready-made, connect-and-go component

Introduction

Mavdero Tech Services is a startup software development company focusing on RPA. They are developing two of their own applications, for contract management and invoice processing, and they also build custom apps for clients, all with integrated AI agents.

Problem Summary

Mathan, the founder, was building a custom board resolution app for a client that required a document editor. Microsoft Word was too complex for the client's needs. Building an equivalent document editing component internally would take months, slowing down project delivery.

> "The outcome was great and the user experience was great," said Mathan. "So, I'll definitely recommend it."
>
> If you're looking to add document processing capabilities to your apps, check out the Essential Studio DOCX Editor SDK.

Use Case

Build a custom board resolution application for a client that includes a user-friendly, fully functional DOCX editing experience—supporting editing, exporting, downloading, and advanced formatting features.

BEFORE SYNCFUSION
Challenges

- ⊗ Need for a feature-rich document editor with editing, downloading, and exporting capabilities.

- ⊗ Avoiding the overhead of building a component with "expected Word-like functionality" from scratch.

- ⊗ Time constraints—development had to be completed quickly to meet client expectations.

AFTER SYNCFUSION
Solutions

- ⊘ Adopted Syncfusion Essential Studio DOCX Editor SDK.

- ⊘ Enabled document editing, exporting, change tracking, and numerous font options. Delivered Word-like features without the complexity of building them internally.

- ⊘ Development time was accelerated dramatically after the Syncfusion integration.

Implementation

Mathan found Essential Studio and gave its DOCX Editor SDK a try. "When we used Syncfusion, that really helped to get the document editor on the screen," he said. "It had all the features of Microsoft Word."

On top of the editing and exporting features, Mathan's team was pleased they could enable change tracking and a wide range of fonts. "The user interface was really very good, which would be a great experience for users.

Results

Essential Studio fast-tracked the development of the board resolution custom app. In a single week after integrating the DOCX Editor, Mathan's team was able to deliver it to their satisfied client.

Mathan gave us his opinion on the top three benefits of using Essential Studio:

- Scalability: "It helps me to scale instantly."

- Speed of execution: "We had a ready-made solution. We just connected, and we solved the problem."

- Customer retention: "It was a big relief. [Without it], I would have needed to put some 2–3 people to work on this component and take weeks, and the client would run away in the meantime".

Future Plan

Mathan is looking forward to exploring more of Syncfusion's components and trying out BoldSign, Syncfusion's e-signature application.

Conclusion

The team at Mavdero was able to shorten their development lifecycle with Syncfusion Essential Studio. He is already recommending Essential Studio to some of his clients.
