UPGRADE YOUR APIS WITH ESSENTIAL STUDIO®

Customer Background

For over a decade, Applied Building Information LLC (ABI), a construction specifications firm, has given clients the ability to achieve their project goals by converting their ideas into actionable steps. While ABI was founded in Washington, the company now works remotely and provides a variety of services for its worldwide clientele—such as construction, product, consulting, and master specifications.

Challenges

There's nothing worse than being weighed down by a clunky developing tool. Matt Stroshane, the IT Director at ABI, knew this all too well. Matt and his team tried using out-of-the-box .NET libraries to manipulate documents, but their APIs weren't up to speed—prolonging the development process.

"We couldn't find a good solution for working with PDF files," Matt said. "Even working with Word documents was clunky at times with the standard APIs." Matt's team needed a user-friendly toolkit to accelerate their programming cycle, so they switched to Essential Studio®.

Solution

With Essential Studio® Document SDK and WPF controls, Matt and his team were able to develop several in-house tools to transform files. He was motivated to try Essential Studio® due to its user-friendly interface, comprehensive framework, extensive range of prebuilt controls, affordable pricing, and committed support team.

"Compared to the standard .NET APIs, Syncfusion® APIs performed equivalent tasks significantly faster," Matt said. "They also enabled new workflows that aren't possible with regular .NET."

Want to try Essential Studio® yourself? Start your 30-day free trial today.

Pull Quote

"It's well worth the effort."
