Syncfusion®

Reduced Turnaround Time with Automated Reminders

Body:

Naresh Mamillapalli is a software developer at Medisca, a global pharmaceutical manufacturing company that operates in North America, Australia, and Europe.

Challenges

What were you using before Syncfusion®?
ASP.NET, VB.NET, HTML, CSS, Bootstrap, and JavaScript.

What challenges and pain points did you face before using Syncfusion products?
We weren't able to find a product that met our performance needs. We also wanted to avoid user error when making the UI for our app.

Solution

Which Syncfusion products do you use?
Essential Studio® Blazor components.

What are your favorite features of Syncfusion products?
• User-friendly UI
• Easy to integrate
• Comprehensive and feature-rich UI framework
• Wide selection of prebuilt tools and controls
• Scalable components
• Trusted support team

Results

How have our products helped the application you are working on?
Currently, we're making an internal application using Syncfusion's library of components—a Blazor WASM application. It took us a bit of time to get set up, but once everything was in place, the development went smoothly. It's definitely worth using the Essential Studio library, since it's easy to implement and there's a fast response from the support team.

Pull Quote:

"Syncfusion's library helped us at every point in building our application. It's really good to use and user friendly."
