

Build internal tools for free with Essential Studio®

Customer Background

For over 30 years, IDEA-ENVI s.r.o. has provided innovative software solutions to better understand environmental conditions. Between their air quality reports and geographical presentations, IDEA-ENVI's models directly contribute to the advancement of environmental information systems.

Challenges

For over 30 years, IDEA-ENVI s.r.o. has provided innovative software solutions to better understand environmental conditions. Between their air quality reports and geographical presentations, IDEA-ENVI's models directly contribute to the advancement of environmental information systems.

Solution

Pavel and his team used Essential Studio® to develop several in-house tools, and they're not stopping there. "We've mainly built internal software tools, but for the last six months I've been trying to incorporate Syncfusion® elements into new WPF applications that work with databases—browsing, importing, and exporting data," Pavel said. "Currently, I've used SfChromelessWindow, SfDataGrid, SfBusyIndicator, and SfCircularProgressBar."

Pavel was initially drawn to Essential Studio® due to its feature-rich framework, wide range of pre-built tools and controls, trusted support team, and affordable pricing. "Syncfusion® is better than ComponentOne® and AND has a free license," he said.

Pull Quote:

"It's worth trying. The range of tools is quite wide, and if I needed advice, they always answered me."

—Pavel Riedl
