

Sensibull delivers Live Market Metrics with Syncfusion Charts

Smooth, intuitive UI.

Seamless integration

Timely, reliable support

Introduction

Released in 2017, Sensibull is one of India's leading options trading platforms. Based in Bangalore, Karnataka, Sensibull provides users with real-time market metrics, allowing them to forecast market trends effectively, develop options strategies, and make trading decisions with confidence.

Problem Summary

Riskilla Software Technologies required a robust tool to display column and line series in a single chart and provide contextual details for selected segments. Without these capabilities, interpreting and comparing market data within their Sensibull platform would be less intuitive.

"I definitely recommend Syncfusion tools, especially their charting library."

– **Praveen Kumar**, Senior Software Engineer, Riskilla Software Technologies

Use Case

Developer Praveen Kumar used the Syncfusion Flutter Charts control to create rich, high-performance live option charts, multi straddle-strangle charts, and open interest charts for Sensibull. They enable users to analyze live market activity effortlessly and make more informed, volatility-driven trading decisions.

BEFORE SYNCFUSION

Challenges

- ❌ Struggled to present column and line series in a single chart and compare segments across charts.
- ❌ Needed to simplify live market data analysis and comparison to help users make faster, more informed trading decisions.

AFTER SYNCFUSION

Solutions

- ✅ Integrated Syncfusion's Flutter Charts widget, which supports combination charts and synchronized tooltips.
- ✅ Used Syncfusion's Charts widget to transform complex, real-time market data into easily understandable metrics.

Implementation

Riskilla Software Technologies effortlessly adopted Syncfusion's Flutter Charts widget. "Getting started with Syncfusion's products was very easy," Praveen said. "The documentation and examples provided were clear and straightforward, allowing me to quickly integrate and use the components effectively."

Praveen found the combination charts and synchronized tooltips particularly useful, as they enabled him to implement live option charts, multi straddle-strangle charts, and open interest charts within Sensibull. "Syncfusion's Cartesian chart provides the option to render multiple chart types together, such as column and line," he said. "It also offers the ability to synchronize tooltips across multiple charts on a single screen, which effectively solved our problem."

Results

- Successfully visualized real-time market data
- Highlighted key segment details with tooltips
- Streamlined market data analysis and comparison
- Empowered users to make data-driven trading decisions

Conclusion

With the Syncfusion Flutter Charts widget and its tooltip feature, Sensibull converts real-time market data into rich, high-performance visualizations, including live option charts, multi straddle-strangle charts, and open interest charts. As a result, users can now assess critical market metrics at a glance—driving faster, volatility-informed trading decisions.
