

Meet All Your Development Needs with Essential Studio®

Introduction:

In 1964, the Maldivian government established the State Trading Organization (STO) with the goal of strengthening national food security. It started as a state-funded business that purchased and imported food necessities. However, as the Maldivian economy grew, the organization expanded its imports. Today, STO is a household name across the Maldives, and a national business leader in several industries—such as building materials, consumer electronics, insurance, and healthcare.

Challenges

The IT team at STO was building a system for managing assets. However, soon into the development process, Shimaz, the IT Manager, realized the team wouldn't be able to complete the project without additional tools. "We needed proper components," Shimaz said. Shimaz's team needed a development suite with cross-platform, enterprise-grade UI components, so they turned to Essential Studio®.

Solution

STO used Essential Studio's .NET MAUI controls suite, Blazor components library, and Document SDK to develop their asset management system. Shimaz was elated that the Essential Studio® toolkits are not only user-friendly, but when combined, give the IT team 240+ components to choose from—which practically addressed all their development needs. "The layout design, data binding, and display were easy to use," Shimaz said. "Essential Studio's components cover most of our development requirements."

Syncfusion® also gives users access to a variety of online resources that make it a breeze to get started. Between our community forum, knowledge base, dedicated support team, and 24/7 AI agent, Syncfusion is here to guide users every step of the way. "It wasn't hard to get started," Shimaz said. "The documentation and forum cover most stuff."
