

SynCFusion Community License Gives Healthcare Clinic a Head Start

Accelerated application development

Delivered powerful data visualization tools

Free Community License for students

Introduction

Emiliano Peralta is a software engineering student working with Ceradi Carmen, an X-ray clinic in Ciudad del Carmen, Mexico.

Problem Summary

While developing a web application front end, Emiliano needed an Angular calendar component that supported selecting a range of dates. The time required to build one from scratch was not feasible for the project, so Emiliano searched the web for a ready-made solution.

Implementation

When Emiliano found SynCFusion's Angular Calendar component, he worried that because it was part of a comprehensive collection designed for enterprise and line-of-business development, it would be too expensive to acquire. Fortunately, Ceradi Carmen qualified for the SynCFusion Community License, which grants free access to all SynCFusion UI components for individual developers and small companies. Now, the app has an intuitive calendar interface that lets users select a date range, and it didn't cost Ceradi Carmen anything.

Customer Detail

Emiliano Peralta,
Software Developer

"It's going to save you a lot of time using libraries like SynCFusion."

– **Emiliano Peralta**, Software Developer, Ceradi Carmen.

BEFORE SYNCFUSION

Challenges

- ❌ Needed an Angular calendar that supported selecting date ranges.
- ❌ Small company with limited time and budget.

AFTER SYNCFUSION

Solutions

- ✅ Quickly implemented the Syncfusion Angular Calendar component, which met the key requirement.
- ✅ Ceradi Carmen qualified for the Syncfusion Community License, giving its development team complete access to all Syncfusion Essential Studio components for free.

Results

- Quickly implemented a feature-rich, interactive Angular calendar component without having to create anything from scratch.
- The Community License gave Emiliano and his team free access to 150+ ready-made Angular components.

Future plans

Considering how easy it was to add the Calendar, Emiliano plans to use the Charts component to visualize the clinic's finances and operations, providing management with valuable oversight of the company.

Conclusion

Emiliano's quick success with the Syncfusion Angular component suite is just one of thousands of stories of the Community License helping solo developers and small businesses jump-start their projects.
