

Contents

Preface	viii
Introduction	1
Part 1: Coding and Computational Thinking	6
CHAPTER 1: Why Should K–5 Educators Teach Coding?	8
CHAPTER 2: Coding = Computational Thinking in Action	17
CHAPTER 3: How Do Coding and CT Fit into Curriculum?	26
CHAPTER 4: What Teaching Coding Looks Like	34
Part 2: Engaging Young Coders with Physical Computing Devices	44
CHAPTER 5: Why Teach with Physical Computing Devices?	46
CHAPTER 6: How to Teach with Physical Computing Devices	52
CHAPTER 7: Physical Computing Devices in the Classroom: <i>Resources to Help You Get Started</i>	57

Part 3: Coding with Block-Based Programming Languages	62
CHAPTER 8: Why Introduce Students to Coding with Block-Based Programming Languages?	64
CHAPTER 9: How to Use Code.org within the Curriculum	69
CHAPTER 10: How to Use Scratch within the Curriculum	84
Part 4: Physical Computing: Coding and Physical Devices	100
CHAPTER 11: Why Pair Block-Based Programming with Physical Computing Devices?	102
CHAPTER 12: Physical Computing Resources	107
CHAPTER 13: What <i>You</i> Can Do to Support CS for All	118
Part 5: Coding and Beyond	122
CHAPTER 14: Augmented Reality: Create Real-World Experiences with ARIS	124
CHAPTER 15: Global Collaboration Challenge: Chess	133
Conclusion	136
References	139
Appendix A: Coding and the Standards for Mathematical Practice	144
Appendix B: Discussion Questions	160
Index	164
