ENERGY STORAGE

MASTER CLASS - 6 HOURS

MAY 20 - MAY 22, 2025 | 2:00 - 4:00 PM EST

Join our in-depth three part training to understand the key elements of the power grid and its evolution. Seating is limited to ensure an interactive learning experience.

Session 1: Energy Storage to Date, Applications, and Its Growing Role that looks at:

- Key challenges and aspects of the grid and its stability
- Storage processes, technologies, alongside advantages and disadvantages

Session 2: Valuing Storage as a Resource in Utility Portfolio Planning regarding:

- Optimal levels and values for storage applications and scaling considerations
- Power system planning requirements for achieving successful integration of energy storage

Session 3: Policy and Future Considerations for Regulatory Framework that examines:

- The policy landscape relevant to storage at the federal level
- End of life disposition and chemistries and applications heading into the future
- Cybersecurity concerns and batteries as an asset or a threat

What You'll Gain

Save time by accessing concise, expert-led insights contextualized within current events and business trends.

Gain practical knowledge through real-world examples, case studies, and interactive discussions.

Engage dynamically with an industry expert in an interactive format.

Meet the Instructor: Peter Kelly-Detwiler

Peter Kelly-Detwiler brings 35 years of expertise in the electric energy industry, specializing in competitive power markets and sustainable energy transformation. A former SVP at Constellation Energy, he led their Demand Response Group and now works as a strategist and communicator. He delivers keynotes, workshops, and strategic advice to help clients and investors navigate the rapidly evolving energy landscape. Peter is also the author of *The Energy Switch* (2021) and has written over 300 articles on energy topics for Forbes.com and other publications.
