Notes and caveats	<p>All data is drawn from government survey results and is subject to any associated limitations or distortions present in the source data.</p> <p>Literacy was measured as the ability of people belonging to indigenous communities to read and write in any language.</p> <p>Languages with population shares less than 0.01% or under 1,000 people (whichever is greater) have been aggregated into the “Other” field.</p> <p>All decimal values have been rounded to a maximum of 3 decimal places. As a result language shares may not total 100%.</p> <p>Language fields were calculated by multiplying the percentage of people belonging to each individual Indigenous group from the 2011 census by the proportion of people who spoke an Indigenous language in Indigenous groups from the 2001 census.</p> <p>Empty values represent non-existent data and should not be treated as zero values.</p>

pop_male	#population+m	Number of male population	2020 population estimates
pop_female	#population+f	Number of female population	2020 population estimates
language_data_yn	#meta+data+bool	record	
data_confidence	#meta+confidence	Assessment of data quality (high/medium/low)	
notes	#meta+text	Notes and clarifications on data	

Data confidence description: Examples

High	Data from well regarded government census or other specialist organisation.
Medium	Data from quality source but without clear methodology, or inverse.
Low	Data known to be erroneous, or based on non statistical or imprecise data.
Factors increasing confidence	Data is corroborated. Data can be directly applied to administrative areas without aggregation or manipulation.
Factors decreasing confidence	Data is disputed. Data requires transformation that may affect accuracy, for example combining admin 2 data to form admin 1 data.
