| Notes and caveats | <p>All data is drawn from government survey results and is subject to any associated limitations or distortions present in the source data.</p> <p>Literacy was measured as the ability to read and write in any language.</p> <p>Languages with population shares less than 0.01% or under 1,000 people (whichever is greater) have been aggregated into the “Other” field.</p> <p>All decimal values have been rounded to a maximum of 3 decimal places. As a result language shares may not total 100%.</p> |
| Copyright and terms of use | <p>Empty values represent non-existent data and should not be treated as zero values.</p> <p>Data is available under an Attribution NonCommercial ShareAlike 4.0 International license (CC BY NC SA 4.0)</p> <p>You are free to share and adapt the data subject to requirements for attribution and non commercial use. | data_confidence | #meta+confidence | Assessment of data quality (high/medium/low) |
| notes | #meta+text | Notes and clarifications on data |

Data confidence desc: Examples

| | |
|------------------------|---|
| High | Data from well regarded government census or other specialist organisation. |
| Medium | Data from quality source but without clear methodology, or inverse. |
| Low | Data known to be erroneous, or based on non statistical or imprecise data. |
| Factors increasing con | Data is corroborated. Data can be directly applied to administrative areas without aggregation or manipulation. |
| Factors decreasing cor | Data is disputed. Data requires transformation that may affect accuracy, for example combining admin 2 data to form admin 1 data. |
